

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

E. & O. E.—The above is a Return of the Beneficiaries of the Transvaal War Fund, administered by the Patriotic Fund Commissioners up to 14th February 1901.

S. YOUNG, Colonel,
Secretary.

ROYAL PATRIOTIC FUND.

RETURN for (1) Account of the Net Moneys or Securities paid over or transferred to the Commissioners of the Royal Patriotic Fund on behalf of and for the relief of the Families, or Near Dependents, of the Officers and Men of Her Majesty's Forces, including the Colonial troops, who have lost their lives in, or in consequence of, the war operations in South Africa; (2) Schedule of the Widows, Children, or Near Dependents, or other Cestui que Trusts, ascertainable up to date, entitled to benefit under such Scheme, and the amounts and conditions of their relief.

(*Mr. Kearley.*)

*Ordered, by The House of Commons, to be Printed,
10 May 1901.*

[*Price 10d.*]

ARMY.

RETURN showing the number of Recruits who joined the Cavalry (including Household Cavalry), Royal Artillery, Infantry (including Foot Guards), and Militia, respectively, in the first 3 Months of each Year, from 1897 to 1901, inclusive.

Presented to Parliament by Command of His Majesty.

RIFLE RANGES.

Military Target Ranges.

There are, in Switzerland, ranges of all kinds. Those used by the troops have the firing points and targets entirely in the open. The more modern military ranges have double canvas targets in balanced iron frames, very similar to those used at Bisley and elsewhere, and the frames are fitted to take either square targets or figure targets. The markers are in covered trenches, and ample target sheds, &c., are provided on the spot. Sections of light metal roofing are sometimes provided to protect the iron frames from the weather. The targets used are no larger than 1.80 metres (about 6 ft.) square. The most modern pattern of frame is balanced by a single wire rope passing over a pulley of about 6 in. diameter, fixed in the centre of the framing above. The wire rope has an eye at each end, which is passed over a hook on the inner side of the upper part of the frame. The frame itself has four deeply-grooved pulleys, two at each end, which run on vertical T-shaped iron bars and act as guides. This pattern of frame, invented by Colonel Kindler of Zürich, may be seen at the range of Rehalp, near Zürich, or at the more completely equipped military range at Albisgütli, also near Zürich.

Field-Firing Ranges.

There are also at Wallenstadt and other military centres field-firing ranges fitted up with disappearing figure targets, which are fitted to poles placed horizontally, and capable of revolution through a quarter circle. These are connected to a shot-proof building in a central position by wire rope and turned by windlasses. This method, however, does not cause the figures to appear and disappear with any suddenness. The use of figure targets and head and shoulder targets of wood, which can be placed anywhere, and are so arranged as to fall when hit, is increasing in Switzerland, as they show the actual effect of fire in the field. There has been some difficulty in devising a form of target which would fall with the slight shock of a bullet passing through it and yet could not be blown over by wind; but a simple one, invented by Captain Otter, made of wood, and depending (as other kinds mostly do) on the release of a weighted lever, hung in unstable equilibrium, seems quite satisfactory.

The building from which the targets are worked is in telephonic communication with various points on the ground passed over by the attackers, and the superintending officer accompanying them is thus enabled to give orders from time to time, as the practice proceeds, for the exposure or withdrawal of the various sections of targets. One instrument only is used, and it is carried from place to place as required. It is very much smaller and more portable than the official pattern in use on the military ranges in this country.

Club Ranges.

The Club ranges are of all kinds. Those recently fitted up by wealthy clubs are extraordinarily elaborate and complete. For instance, the new range at Albisgütli, near Zürich, belonging to the Schützengesellschaft der Stadt Zürich, has a shooting-house situated where it commands a lovely view over the town and lake. The building has two storeys; on the lower floor are firing points for 53 targets at 300 metres and 12 revolver targets, and on the upper floor firing points for 15 targets at 400 metres. The targets are.

set against a steep mountain side, those for 400 metres beyond those for 300, while a long wooden screen is placed so as to intercept the view of each set of targets from the firing point of the other set. The nature of the ground is such that there is no object in having safety screens to catch the shots that might pass over the butt. The building contains an armoury and excellent office accommodation, &c. The firing point and targets are connected by a bullet-proof covered way, partly tunnelled, partly built of concrete. The target trenches are very completely equipped; they are entirely under cover and have glass roofing to admit ample light to the targets. At each target is an electric bell, rung by the register-keeper at the firing point whenever a shot is fired, as a warning to the marker. This is an ordinary feature of the better equipped Swiss range. The targets are in pairs, balanced, and run in wooden grooves; they are set very close together, having an interval between them of not more than 18 inches. This is sufficient for so limited a range, and it is the rule in the Swiss club ranges. The Albisgütli club range has a large refreshment building with a very big dining-room and an enormous room half closed in and capable of seating from 2,000 to 3,000. It has cellars well stocked with casks of wine belonging to the club, and the profit on refreshments sold to the shooters and to the numerous other visitors on shooting days is a substantial item in the balance sheet of the club. Adjoining the club range is a range for the use of the troops, with a very complete installation of target frames and targets up to 500 metres; there are good telephone attachments, and the targets are in trenches at different distances from the firing point. Within a few hundred yards of this range, on the same mountain side, is a field firing range fitted with disappearing targets, &c., and in fact a large sum has been spent at Albisgütli by public bodies and by individuals to provide a sufficiency of target accommodation of all kinds.

If the Albisgütli ranges have been described in some detail, it is because they are the newest. But there are others, such as the Stand St. George's at Geneva, which are but little older and very similar in arrangement; these, too, meet every possible want of a rifle club.

The Clubs in the smaller towns have ranges usually equipped with a covered firing point and a covered building to shelter the targets and the markers' trench, but have little elaboration of accommodation or fittings. Such a range will sometimes serve—at different times during the week—Clubs of differing social status. Sunday afternoon is, of course, the most popular time.

The system of balanced canvas targets has been in use in Switzerland for many years, and indeed was introduced thence into this country. But there are many Clubs in Switzerland which have more primitive arrangements. Thus at the village of Möriken, near Aarau, rough frames made of fir-poles are fastened into the ground below a wooded mountain, and on these the targets are hung when required. A small hut placed near by—it was erected by the Commune—serves as a store, and a large flat stone placed upright in front of it forms a shelter for the marker. A cart track across the cultivated ground towards the wood adjoins the range for its whole length, and thus no ground is taken up by a special track up the range. The marker receives a payment of 4 frs. per shooting day, and has to find such accessories as paste and patches. Six targets can be used at once here, and are set up close together, and when this is done six men fire at them simultaneously, and at the conclusion of a series of shots the hits found on each target are signalled. But it is not possible without much delay—nor does it seem to be desired—to mark the value of each shot as it is fired. Such shots as are too high to strike the bank behind the target are received by the timbered slope above, and for any damage done in this way to the timber the Commune (*i.e.*, the body of the ratepayers generally) is responsible, as it is also for damage to crops grown upon the range.

The range accommodation in the smallest villages and hamlets is of the simplest, and dispenses with all fixed plant. Thus at Holderbank, a hamlet of the parish of Möriken, there is nothing to indicate where the targets or firing points are arranged. When firing is to take place, the targets and the very light rough frames on which they are fastened—one can hardly say stretched—are brought out on a hand-truck to a convenient hollow running back under a wooded slope. Some three or four targets are stuck into the

ground with temporary supports, and if the shooting is to be at 300 metres they are erected at that distance from the edge of a public road, which makes a convenient firing point without interfering with the cultivated ground. If the shooting is to be at 400 metres the targets are placed correspondingly further back. There is no attempt at a shelter for the marker, but when all is ready he retires behind a knoll to one side of the targets out of sight until the blast of a horn gives the signal for him to come out, mark the shots which have been fired and patch them over.

The marker wears a scarlet blouse—this is a Swiss custom, and is 300 or 400 years old—and thus in his own person is a danger signal. The shooters place themselves as convenient on the bank or on the flat, and shooting is regulated by the Schützenmeister. There is said to be one village in Switzerland where the marker has no shelter provided, but sits with his wife and drinks his beer at a table 20 or 30 yards to one side of the target, and within full view from the firing point.

Assistance given by the Communes.

The various Communes are under the obligation of providing rifle ranges, and are armed for the purpose with compulsory powers. These rest upon a Federal law of 1st May, 1850, known as the "Loi de l'expropriation pour cause d'utilité publique." Under this law property required for public works or service may be expropriated on payment of a reasonable indemnity.

The Act of 1874, dealing with military organization, imposed on Communes the duty of providing at their own expense sufficient and suitable rifle ranges.

A Federal message of 1st May, 1898, states that great difficulty had been found in the case of some Communes in providing the longer range and greater accommodation required for the new rifle, and that, in some cases, individual interests had stood in the way. It was decided, therefore, to apply the law of expropriation to strengthen the hands of the Communes, and for this purpose ranges are brought under the head of "travaux publics." The property or rights to be taken over are purchased on a valuation made by a Commission.

The liberty of Communes to assist rifle shooting in other ways—as by providing range buildings and giving grants of money for prize shooting—is considerable. The Communes are liable for all damage done to crops or other private property by firing or the use of the range.

Statistics of Swiss Ranges.

The number of ranges in Switzerland was officially reported in 1895 to be 2,735, a number giving not quite one to each of the 3,200 Communes. The discrepancy is explained by the fact that adjoining villages sometimes use a conveniently placed range in common.

The bulk of the shooting is at 300 and 400 metres; hence we find that—

118 ranges were up to 300 metres only.					
1,683	"	"	"	400	" "
500	"	"	"	500	" "
434	"	"	"	600	" or more.
<hr/>					
2,735					

2,080 ranges, or 76 per cent., had no building at either target or firing point. 184 (7 per cent.) had a target shelter only; 110 (4 per cent.) a firing point shelter only; 361 (13 per cent.) buildings at both targets and firing points. It was reported that 2,458 ranges had proper shelters for the markers, but 277 (10 per cent.) not.

2,551 ranges were considered safe as regards the line of fire behind the butts, and 184 (7 per cent.) unsafe; as regards protection from wide lateral shots, 2,490 were found to be sufficiently provided for and 245 (9 per cent.) insufficiently.

Of the whole number of ranges 2,148, or 79 per cent., were passed as satisfying the official requirements, while the remainder failed to do so.

It is worthy of note that there does not seem to have been any desire summarily to close as "dangerous" the ranges not satisfying the official requirements as regards safety. The attention of the district officials and Shooting Committee would, no doubt, be drawn to these cases, and pressure brought to bear and advice given as to the best means of remedying the deficiencies complained of. But we hear of no closing of ranges meanwhile, for in Switzerland rifle practice is recognised to be a necessity.

Screened Ranges.

The rugged nature of the country has removed, for Switzerland, most of the obstacles to finding sites for ranges. In few places is there any difficulty in finding within a short distance a hillside steep enough to form a safe background for the targets. Often there is a long stretch of hill or of timber in the line of fire. But this is not always the case, and in a small proportion of the number of ranges—certainly not nearly all the 361 which were shown in the returns for 1895 as having covered-in firing points and targets—screens are interposed between the butt and the firing-point to intercept any wild shots.

There are sometimes as many as three screens—sometimes only one. Thus, at one of the ranges just outside Berne, there is a high concrete wall about 20 yards in front of the target with window-like openings, framed in iron, in front of each firing-point. Through these the view is limited almost to the competitor's own target. On this range it was clear that a certain number of shots had missed the openings and been stopped by the wall. But there was nothing to interfere with the erratic flight of a bullet which should graze the edge of an opening, nor with one which should strike the ground in front of the target and ricochet upwards. There are, however, 2 or 3 kilometres of wild forest ground behind the targets.

The usual material for intercepting screens is not concrete but timber, often made hollow and packed with shingle, a cheap material and one really effective in stopping modern bullets.

The range at Lucerne is perhaps the most notable Swiss example of a range having houses in rear of it. It has some undulating ground rising—but not steeply—at a little distance behind the butt, and a frequented footpath passes quite close behind the butt. This range, which has twenty-five targets at 300 metres, has existed for some twenty years, and has at least two houses—built, apparently, since the range has been in existence—in the direct line of fire, and within half-a-mile of the butt. Here there are three rows of timbered screens, but no provision whatever for stopping ricochets (except one bank quite near the firer) or shots of wide lateral deviation. The very posts which support the screens are in their degree a source of danger, for a bullet grazing one of them might well pursue a very erratic course to one side. There has never been an accident, so far as could be ascertained, on this range, nor are any special precautions taken as regards the houses in rear or the footpath during firing. It is fair to say that this range was made for the older patterns of rifles with lower velocity than the present, and would not have been passed as safe had it been made in the last few years. As an existing institution it continues; no accident happens and nobody makes complaint; but no doubt before long it will be superseded by one fitter for modern weapons.

At the range at Rehalp, near Zürich, there is a road passing immediately behind the butt, which is high enough to shelter it amply. The butt is somewhat prolonged to one side on account of the road, but not nearly to the extent which would be considered necessary in this country.

A screened range, not unlike some of the Swiss ranges, exists at Milan, near the Porto Romano. Here there are houses within a few hundred yards behind the butt, the ground being very flat. The butt itself is a wall about 30 ft. high, and there are side walls enclosing the range with high wooden screens, placed diagonally, rising above them at intervals. There are three timber screens to intercept high shots, and about three ricochet banks,

topped with loose sand to every 100 yards. But it cannot be said that it would be at all impossible for a grazing bullet to escape from the range. This range is about twenty years old, and, like other Club ranges in Italy, has been brought from the Club by the military authorities. It is now about to be re-arranged, with only one "paraballe" or screen, at 50 metres from the firing point, and a system of ricochet banks; a larger number of targets than those now existing (nearly thirty) will be arranged for by economising space. In this range, as in one at Turin, the butt wall is faced with a deep layer of old clothes to help in stopping the bullets.

The difficulty of making ranges really safe for modern rifles is being felt both in Switzerland and in Italy, and the tendency everywhere is to remove the ranges from out of the inhabited places. In Italy, especially, where much of the country is devoid of hills or forests, the lack of safe ranges has been severely felt. Practice with the Regulation rifle is now limited to a distance of 100 metres, and great efforts, which seem likely to be successful, have been made to devise a cartridge with a very much reduced charge and a lightened bullet, capable of working through the magazine and of making good practice up to 200 or 300 metres. One device is to fill the rear end of the nickel case of the bullet with sand to make it lighter while preserving its dimensions.

There does not seem to be in Switzerland any modern screened range providing the same complete degree of safety as that at Wormwood Scrubbs. In none of them, however, is the view of the surroundings of the target so restricted. It would seem, however, that this restriction of the field of view is inevitable, if complete safety for a range in a thickly populated place is desired.

Where population is not thick it should be possible to obtain practically complete safety by the erection of screens with larger openings and a system of ricochet banks. There is no difficulty in intercepting direct shots that would pass very wide of the target in any direction, and the number of ricochets, which can then occur only by a bullet striking the edge of the opening in a screen or the top of a ricochet bank, should be reducible to an insignificant quantity.

It is not easy to arrive at the cost in Switzerland of erecting safety screens, as the butt and the buildings at the target and firing point represent much the largest proportion of the cost of a completely fitted range.

Covered Firing Points.

The Swiss system of shooting from under a roofed-in building is confessed, by the Swiss rule of conducting all military shooting in the open, not to fulfil all practical requirements. Both covered firing-points and screens put a permanent limit on the distances at which firing can be done. Where the firer is sheltered overhead, behind, and on both sides he does not easily learn to appreciate fully and allow for the conditions of light, wind, and weather, even if his view is not further limited to the openings in screens. In shooting from under cover the appearance of the sights is quite changed, as no light can fall upon them from above or behind. The noise, too, caused by the reverberation of the shot in the building is unpleasantly great.

On the other hand, there are obvious advantages in having firing points sheltered from the weather, with armoury, magazine, offices, &c., under the same roof. The shooters are made comfortable, and, be the weather good or bad, a man going to shoot is sure not to be balked of his practice. Further, when he is sheltered from the wind, his shooting is pleasanter and more accurate. The shooting house becomes a social centre, and on Sunday afternoons, especially when prize meeting or a match is in progress, there are a large number of visitors.

Care in Supervision of Shooting.

There is in Swiss shooting an element which goes far to compensate for any want of precaution in the range accommodation. It is not there the custom to consider that it does not matter if a man misses the target several shots consecutively. Still less would it be thought reasonable to allow him

to fire at a longer distance when he had altogether failed at a shorter one. Careful supervision in the instruction of the boy or the recruit is the invariable rule, and the man who is incapable of shooting fairly well feels himself inferior to others. Anyone firing wildly is at once stopped. How good the average degree of skill is, may be judged from the fact that the 6 ft. square targets on the Club ranges are not placed more than 18 ins. apart, even when used at 400 metres. In deciding whether a range is safe or not it is hardly thought necessary to take the possibility of accidents from carelessness into consideration.

Public Opinion.

A principal element in the provision of ranges in Switzerland is the state of public opinion on the question. The Communes have, as a matter of duty, to provide ranges for their Clubs, while the military authorities provide special ranges for military training. All game rights are now public property, and sold every few years by auction, so that they are subject to any disturbance which may be created by the local range. Everyone is familiar with the rifle and its use, and the existence of a range has for the population none of the terrors which attend an unknown danger; there is no nervousness and therefore no exaggerated fear. Finally, the people recognise the necessity of national defence and of individual skill in shooting, and public opinion supports it. Anyone who attempts selfishly to make difficulties about ranges becomes a public enemy, and no man dares to interfere with the provision of all facilities for the active army, the reserves, and the population to exercise themselves everywhere in the use of their weapons.

MEMORANDUM ON SWISS MUSKETRY TRAINING.

As the Swiss Army is purely a militia force, and as such is only available for training during a short period of each year (in the case of infantry every other year), and as a man, once he has fired his recruit's course of musketry, can, and generally does, fire his annual course in a civilian shooting club, it is very difficult to compare the general method of training in Switzerland with our own, except to a certain extent with that of the recruits and in one or two minor details.

To begin with the recruits. When the men come up for training they are formed into companies of about 100 each with 4 officers, each company under the supervision of a staff officer. The recruit's training lasts 45 days, and in that time he has to learn everything about his business as a soldier. He is kept hard at work and is only taught those things which are absolutely necessary; for instance, as far as manual exercise is concerned, only to "order," "sling," and "pile" arms, as those are considered sufficient for all practical purposes. He is not taught the bayonet exercise. Musketry training is combined with the other work, and is not looked on as a thing by itself, though it is considered the most important part of the training. It is very carefully carried out step by step, the amount of individual attention each man receives being particularly noticeable. Conditions are laid down to be fulfilled at each range before going on to the next, so that no man fires at the long ranges before he is fairly proficient at the shorter ones, thus minimising the chance of accidents. All individual practices are carried out in marching order to accustom the man to firing with his pack on. A rest is used to support the rifle when the recruit first fires at a target, this enables him to confine his attention to begin with to aiming and pressing the trigger properly; it encourages him too by helping him to hit the target when he first commences, and teaches him that he must hold his rifle steady to do so. For shooting standing the rest is a slanting bar of wood, cut in steps, to suit men of different height, fixed on an upright with two cross pieces at the bottom as feet. For the kneeling position, the practice is fired from a shelter trench, the rifle resting on a sandbag on the parapet.

A sandbag is used for lying down. Collective practices are not fired on the measured range, which is used solely for individual shooting. Fire

discipline is carefully taught, but either without ammunition or with blank. Towards the end of the 45 days' training a three or four days' march in full marching order is carried out, the companies either bivouacking or going into billets for the nights. Field firing is carried on on one of these days, a small party under an officer of the instructional staff being sent out to select the position and put up the targets. We saw a company of recruits do their field firing; they had marched about 25 miles the first day, and about 15 the second, on which the field firing took place. The scheme was a very simple one. The targets used were screens about 30 yards long and 20 inches high with heads and shoulders painted on them. In the intervals between these screens were a few separate head and shoulder targets which fell down when hit, and so helped the firers in finding the range, as the ground was not favourable for seeing the shots strike. The exercise was carried out without any noise or confusion, the men firing steadily and well and taking every advantage of cover, in fact, considering that these men had only had about six weeks' training, the results were extraordinarily good.

The trained man, that is to say, the man who has gone through the above-mentioned 45 days' work, which is the principal training of his whole service in the army, only comes up afterwards for 18 days every other year, but he has to fire a course of musketry every year, which he does as explained in para. 12 of the Report on Rifle Clubs.

Other points for comparison are as follows:—

(1) No money prizes are given for shooting in the annual course; badges of different sorts, which are worn on the arm, take their place.

(2) Volley firing is never employed, but a kind of independent, one round at a time is used instead. It is carried out as follows:—The fire unit commander gives the command "ready," points out the target and names the distance; he then simply gives the command "fire," on which each man comes to the "present" independently, fires one round, reloads, and remains at the "ready" till the section is ordered to fire again. They say this method gives better results than volleys, for the following reasons. With volleys, if a man has not got a satisfactory aim when the command "fire" is given, he either does not fire at all, or fires and misses the target, and that even when a man has got a good aim, the fact of his having to fire by word of command often causes him to jerk or pull at the trigger and consequently to go very wide of the mark. They also say their method is quite as good, if not better, than volleys for finding the range. It was not adopted until after the two systems had been most exhaustively tried one against the other. Their whole system of fire discipline in fact is much less rigorous and centralised than ours, a great deal being left to the common sense and initiative of the private soldier, while at the same time the fire is absolutely controlled.

(3) Ammunition on the soldier is carried as follows:—For the magazine, chargers holding 6 rounds each in pouches on the waist-belt. For single loading, a strip of felt with loops for 30 separate cartridges is buttoned on the tunic, one end to one of the front middle buttons and the other to a button on the left shoulder; a similar strip, ready filled, is carried in a pocket underneath the valise, so that it can be got at quite easily by the man himself. When he has finished the first strip, he has only to unbutton it and replace it by the full one.

SALE OF GOVERNMENT PUBLICATIONS.

The under-mentioned Firms have been appointed sole Agents for the sale of Government Publications, including Parliamentary Reports and Papers, Acts of Parliament, Board Office Publications, &c., &c., and discount of 25 per cent. from the selling prices:—

IN ENGLAND:—

For all publications excepting Ordnance and Geological Maps, the Hydrographical Works of the Admiralty and Patent Office Publications:—Messrs. STAN AND BROWNE, East Harding Street, E.C.

For Hydrographical Works of the Admiralty:—Mr. J. D. POTT, 145, Minories, E.C.
Patent Office Publications are sold at the Patent Office.

For all Publications excepting the Hydrographical Works of the Admiralty, Patent Office Publications, Ordnance and Geological Maps.

IN SCOTLAND:—Messrs. GUTHRIE AND BOND, Edinburgh.

IN IRELAND:—Mr. E. PARSONS, 110, Grafton Street, Dublin.

ORDNANCE SURVEY MAPS OF GREAT BRITAIN AND IRELAND:—There are Agents for the sale of these Maps in most of the chief towns. Copies can also be ordered at many Head Post Offices, and through any Bookseller, or from the Director-General Ordnance Survey, Southampton; or, in the case of Ireland, from the Office in Charge Ordnance Survey, Dublin.

GEOLOGICAL SURVEY PUBLICATIONS OF GREAT BRITAIN AND IRELAND:—The Agents for the sale of Ordnance Survey Maps are also, as a rule, agents for the sale of Geological Publications.

The following is a list of some of the more important Parliamentary and Official Publications recently issued:—

Parliamentary:			
Statutes—			
<i>Public General Statute 1899, Sess. 1 and 2: With Index, Tables, &c., &c. Roy. Env. Cloth.</i>			
<i>Second Revised Edition. A.D. 1235-1713 to A.D. 1872-1883. XVI. Vols.</i>			
<i>Revised Edition. Tables showing subsequent Repeals, effected by Acts of 62 & 63 Vict. 1899.</i>			
<i>Statutes in Force. Chronological Table of and Index to. Sixteenth Edition. To end of 63 & 64 Vict.</i>			
<i>The Statutory Rules and Orders revised. Statutory Rules and Orders, other than those of a Local, Personal, or Temporary Character, issued prior to 1890, and now in force. Vols. I. to VIII.</i>			
<i>Statutory Rules and Orders other than those of a Local, Personal, or Temporary Character. With a List of the more important Statutory Orders of a Local Character arranged in classes, and an Index. Roy. Env. Boards. Issued in the years 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, and 1900.</i>			
<i>Statutory Rules and Orders in force on 31st December 1899. Index to.</i>			
<i>Statutory Rules and Orders, 1901. Regulated under the Rules Publication Act, 1893. In course of issue.</i>			
<i>Index to Local and Personal Acts, 1891-1899.</i>			
<i>Acts of Parliament, Local and Private. Session 1901. In course of issue.</i>

MEMBERS.

Mr. CLINTON E. DAWKINS (*Chairman*).

Mr. E. W. BECKETT, M.P.

Colonel Sir GEORGE CLARKE, K.C.M.G., F.R.S.

Mr. G. S. GIBB.

Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.

Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

TERMS OF REFERENCE.

The Secretary of State refers to the Committee—

- (a.) The Report of the Committee on Decentralisation of War Office business, 1898.
- (b.) The Report of the House of Commons Committee on War Office Contracts, 1900.
- (c.) The Draft Report of the Departmental Committee on War Office Establishments, 1898–99,

and, subject to the general distribution of responsibility laid down by the Order in Council of 7th March 1899, requests the Committee to consider—

1. Whether the present method of conducting the administrative and financial business of the War Office, and its distribution as between the civil and military departments, is satisfactory.
2. Whether the detailed financial audit as conducted in the War Office is required by the public interest; and whether the existing financial checks on the War Office hinder the efficient transaction of its business.
3. Whether the office of the Director of Contracts should deal with all the business now transacted there, or whether the making of contracts could be in whole or part transferred to the military districts, or to the military departments of the War Office.
4. Whether (with or without a transfer of staff) any of the administrative and financial business now transacted in the War Office could be delegated to the military districts.
5. Whether any change in the numbers, status, and pay of the clerical staff is desirable.
6. Whether military Officers and military clerks should be substituted in any degree for the present trained civilian staff;

and to report any other amendments of procedure in connection with the afore-mentioned subjects which would bring the work of the War Office more into harmony with that of large business undertakings.

REPORT.

SECRETARY OF STATE,

1. The Committee appointed by you on the 17th December last, to consider and report on certain matters relating to War Office Organisation, first met on January 8th, and have held 37 sittings.

2. The Committee decided, in the first place, to invite written suggestions on certain points from various quarters; and to ascertain the opinion of experienced administrators acquainted with the duties of the War Office with regard to the general conduct of business in this Department of State. Inquiries were addressed to a number of General Officers respecting the measures taken in consequence of the Report of the Decentralisation Committee of 1898, and they were asked to state their views upon the possibility of further decentralisation. Information was also obtained from railway companies, from important manufacturing companies, and from large co-operative societies with reference to their business procedure, and, more particularly, as to the methods adopted by them in making purchases and contracts and in dealing with contractors.

The replies to these communications have been printed in the form of appendices.

3. The Committee also proceeded to take evidence, both on the points mentioned above and on other matters. They had the advantage of hearing, among others, the Adjutant-General, the Inspector-General of Fortifications, the Director-General of Ordnance, the Quartermaster-General, the Military Secretary, the Permanent Under Secretary of State, the Accountant-General, and the Director of Army Contracts, as well as Lord Haliburton (late Permanent Under Secretary of State), and the following General Officers Commanding Districts, General H.R.H. the Duke of Connaught, General Sir Redvers Buller, Lieutenant-General Sir William Butler, Major-General Sir J. F. Maurice, Major-General L. V. Swaine, and Major-General Sir T. Fraser. The financial relations between the War Office and the Treasury, and the procedure with regard to contracts followed at the Admiralty, were explained by representatives of those Departments. The evidence of all the witnesses has been recorded, and various documents which were communicated from time to time have been printed.

4. Further evidence was given on the subject of contracts by representatives of great manufacturing and business firms, both to the Committee and to individual members, but on the understanding that such evidence should be regarded as confidential. The Committee visited the Arsenal at Woolwich, and took evidence on the spot from the Woolwich officials, while individual members visited the Ordnance Factories and the Headquarters of certain military districts.

5. In entering upon their labours, the Committee were confronted by the terms of the reference, which made their inquiry *subject to the general distribution of responsibility laid down by the Order in Council of 7th March 1899*. This limitation precluded the consideration of any organic changes in the constitution of the War Office.

6. The arrangement of the matter of the report has been somewhat complicated by the overlapping of the subjects covered by the reference. The Committee have, therefore, thought it advisable, in the first place, to state the general impressions to which their inquiries have led, to set forth existing defects and to lay down principles of administration which need to be applied to the War Office. Questions specifically referred to the Committee will then be grouped into different, and as far as possible independent, sections, namely, Internal Organisation, Financial Control and Audit, Contracts, Clerical Establishment, and Decentralisation. Recommendations will be made under these heads.

The last and most comprehensive question referred to the Committee—that relating to the general control and direction of the War Office as a whole—will be treated in the concluding section of the Report.

7. The general structure of the War Office organisation has been built up piecemeal as the result of constant changes and compromises. Principles of administration and of business have been too frequently subordinated to temporary exigencies, or to personal and political considerations.

Q. 2283 and
2430.

Thus, in place of becoming a compact machine working smoothly upon lines well conceived and thoroughly understood, the constitution of the War Office has been subjected to so many modifications, large and small, that the relations of the various parts have been shifting and indeterminate. What has been so perpetually changed and refashioned, not infrequently without reference to any ascertainable principle, is necessarily wanting in the element of permanence. Definitions of the duties of departments have, therefore, been wavering and uncertain. Hence, as Sir Ralph Knox stated, speaking from a long experience, and as the Committee have amply convinced themselves is the case, there is a disposition on the part of energetic heads of departments to draw power to themselves, and to enlarge the area of their activities beyond all reason and expediency. Great confusion is thereby introduced, and individual responsibility cannot be assigned.

Q. 3415,
4030, 4970,
7289.

8. These evils are enormously augmented owing to the government of the Army by the War Office being mainly carried on by a vast system of minute regulations, which tend to destroy the responsibility of General Officers, and to suppress individuality and initiative in all ranks. The complexity of regulations is now so great that their interpretation alone leads to a mass of useless correspondence. This state of affairs constitutes a grave detriment to the public service. The practice of making endless references to obtain authority, and reluctance to take direct action, are inevitable consequences.

It was stated in confidence to the Committee by witnesses accustomed to deal with both Offices that, whereas in the Admiralty it is possible to know where to go for a decision, and subordinate officials there promptly assume the responsibilities delegated to them, the task of obtaining a decision at the War Office is often, on the other hand, difficult and protracted. It follows that the mass of unnecessary routine work within the War Office is so great as to absorb the energies of the staff, which is generally overworked, and that high officials engrossed in routine have not sufficient time to devote to questions of real importance. Matters of policy are, therefore, not adequately considered. The necessary sense of proportion is lost, and the training and preparation of the Army for war must inevitably suffer.

9. An unfortunate suspicion also exists in the Army that technical military questions are sometimes decided by permanent civilian officials. All these unsatisfactory conditions necessarily promote distrust of the War Office on the part of the Army and of the public.

Q. 5591,
5614, 6918.

10. The Committee, while aware that the custom of questioning Ministers in Parliament and of moving for returns is a necessity of the constitution, have been impressed by the growing abuse of the practice. In the year 1900, when the War Office was confronted with an enormous pressure of important work, no fewer than 1,379 questions on matters affecting the Army were asked in Parliament, or an average of 66 for each week of the session, while on several days the numbers varied between 20 and 50. Although these questions are frequently of a trivial character, and are in many cases asked without any verification of the supposed facts on which they are founded, the labour and the correspondence involved is very considerable. Moreover, while the time and energies of high officials are diverted from more important work, the necessity thus imposed upon the War Office for constantly dealing with minor matters arising in the districts largely contributes to undue centralisation.

11. The Committee consider that a general, if not a precise analogy, can be established between the conduct of large business undertakings and that of the War Office. There are certain well-defined principles of management in all well-conducted business corporations, and the more closely

the War Office can be brought into conformity with such principles, the more successful will be its administration.

12. The following principles are particularly applicable to the War Office, and are conspicuously absent from it:—

1. The division of the work of the War Office into well-defined sections.
2. Distinct definition of duties and responsibilities of individuals, accompanied by an adequate delegation of powers.
3. A clear adjustment of the relations between the Civil and Military Departments.
4. Adequate provision for dealing with questions of policy and military preparation, unhampered by administrative routine work.
5. The substitution of an effective system of inspection for elaborate returns and minute regulations in the government of the Army by the War Office.
6. Decentralisation, meaning a large and real delegation of authority and responsibility to General Officers Commanding Districts.
7. Adequate machinery for co-ordinating work of all kinds, Civil and Military, and for securing effective supreme control and management of the business of the War Office as a whole under the authority of the Secretary of State.

The Committee have kept these general principles constantly before them in framing the various recommendations in the Report.

INTERNAL ORGANISATION.

13. The first heading in the reference directs the Committee to report whether “The present method of conducting the administrative and financial business of the War Office and its distribution as between the Civil and Military departments is satisfactory.”

The Committee have no hesitation in asserting that both the method and the distribution are unsatisfactory in several respects.

14. The Committee consider that it lies outside the scope of their duties to enter into the detailed administrative arrangements of the several Departments. These details must be worked out in the ordinary course of business at the discretion of their Heads, who should be held responsible for the smooth and efficient working of the branches of the War Office which they severally control. The measure of success attained in this direction is the gauge of their administrative capacity.

15. It is, however, clear that the definition of the respective duties of departments contained in the rules of War Office procedure (*see* Appendix II.) fails to determine responsibility, and to prevent the undue overlapping of functions.

16. The relations between the Departments of the Quartermaster-General and of the Inspector-General of Fortifications afford examples of the want of proper definition of duties. Their individual functions in regard to such questions as the construction of barracks, the selection of sites and the adjustment of accommodation, are evidently intermixed. The provision of rifle ranges is dealt with by three Military Departments. It may be necessary that all these Departments should intervene in these questions. But one single Department should be charged with their settlement. Q 5863,
5936, 6435.

The organisation for dealing with Military education appears to be on an anomalous basis and to need investigation. Military education is divided into two sections which deal with the education of officers and of men respectively. The section dealing with the former acts under the Military Secretary. The other section is under the Adjutant-General. Both sections have to refer for decisions to departments engrossed with other work of a different character. Q. 9660, &c.

17. As regards the internal arrangements of departments, the Adjutant-General's Office supplies an example of congestion of business and of excessive centralisation. The first section of the Adjutant-General's Department employs more than 40 clerks, who work without any proper Q. 5504,
9381, &c.

distribution of duties or organised supervision. The Committee hope that the proposal lately put forward by the Adjutant-General for reconstructing this Department will be dealt with at once.

18. Again, there is a general want of adequate delegation of authority in the War Office, with the result that subordinate officers acquire the habit of referring minor questions for the consideration of superiors, whose time is thus diverted from the consideration of matters of greater importance.

These defects result in an unreasonable amount of internal correspondence, involving excessive minute writing, and leading to delays and to conflicting decisions.

19. The proper distribution of duties between the Military and Civil branches of the War Office is vital to an effective central administration of the Army. When the Military Branch was at the Horse Guards and the Civil Branch at Pall Mall, their functions were separate and distinct. Parliament through the Secretary of State interfered little with Military administration. On the other hand, the Military Department had no financial responsibility in practice or in theory. These conditions have now changed. The Secretary of State must exercise a large control over purely administrative Military work; while an increasing measure of financial responsibility must devolve upon the Military element.

20. The Military and the Civil branches are now under one supreme authority; but, partly from tradition and partly from other causes, a dividing line between these branches still, to some extent, exists. It is essential, as far as possible, to obliterate any sense of division which produces antagonism, delays the transaction of business, and causes re-duplication of work and irresponsibility.

21. As stated by the Decentralisation Committee of 1898, "The imposition of increased financial responsibility on General Officers should be accompanied by more complete association and union between the Military and the Civil Departments at the War Office." Very little has been done to give practical effect to this most important recommendation. The relative responsibilities of the Military and of the Civil sides of the War Office are, like those within the Military departments themselves, imperfectly defined.

22. As regards finance, the proper duties of the Civil Branch fall under two heads, viz. :—

(a.) The examination and audit of Expenditure.

(b.) Concurrent financial criticism, the keeping of Accounts, and the collation and review of Estimates.

As regards (a.), it is evidently necessary that audit should be entirely independent of the Military Departments, whose expenditure is being reviewed.

But the duties included under (b.) should be discharged in closest contact with the Military Heads, who should have the benefit of expert financial assistance alike in the preparation of their estimates, in the interpretation of regulations, and in the financial consideration of new proposals arising in their departments.

Q. 5495, &c.
6957, &c.

23. Important evidence was given to the Committee that Military Spending Departments are not sufficiently in touch with the Financial Branch of the War Office, and have no direct means of obtaining that financial assistance and knowledge of the progress of their expenditure which are essential to the due discharge of their duties. There should be representatives of the Accountant-General in the Military Spending Departments, who would not cease to be his officials, but should be at the disposal of the Head of these Departments, to act as financial advisers and render financial assistance within the Departments. The Committee were informed by the Director-General of Ordnance that an arrangement of this nature had been made as regards his Department, and that it had been found to work satisfactorily. The Military Spending Departments, thus provided with adequate financial advice, would become complete administrative units, and the responsibility of their Heads would be rendered more real than it is at present. With the assistance of

Q. 5225.

these Branches, the Military Spending Departments should have full control over their votes, and their interpretation of regulations should be final.

24. Proposals were made that went beyond this recommendation, and it was urged in some quarters, either that the Accountant-General's Department should be transferred to the Commander-in-Chief, or that its several sections should become integral parts of the Military Departments with whose work they are respectively concerned. It is essential, however, that the Secretary of State should continue to have immediately under him the financial staff for watching and controlling military expenditure, while at the same time it is necessary that there should be the closest co-operation between the Military and Civilian Departments. The Committee believe that their proposals will do much to effect this, and that the closer relations established between the Military Departments and the Finance Branch will result in economy to the State. Q. 3817, &c.
6865, &c.
7316.

25. As regards the Central Office (Secretariat, Registry and Parliamentary work), complaints have been made continually by the public of the dilatory conduct of correspondence by the War Office. Much of this is due to the constant references from department to department, and to the enormous correspondence which proceeds, under the present system, between the military districts and the War Office. But it is also partly due to want of systematic control throughout the War Office, and partly to weakness in the Registry, which distributes the letters and papers coming into the War Office to the various departments, military and civil.

The official ultimately responsible for the proper working of the Central Department as a whole is and must be the Permanent Under Secretary of State. But his time is very fully occupied, and the Committee think that the immediate supervision over its working should be more precisely delegated to the Assistant Under Secretary than has been the case in the past. This would leave the Permanent Under Secretary more free to exercise his larger functions, and especially those indicated in the concluding section of this report. Q. 5043.

26. It appears that supervision over the Registry has, as a rule, been delegated to the Assistant Under Secretary; but the Committee were informed that recently, having been unable to obtain from the Permanent Under Secretary the increase of staff which he considered necessary, the present Assistant Under Secretary asked to be "relieved of responsibility" for the Registry. Apparently he was so relieved, and the Permanent Under Secretary thenceforward added a nominal supervision over the Registry to the many other duties engrossing his attention. Q. 4782,
5046, &c.

27. The task of the Registry is a heavy one, and specially needs adequate supervision and organization. Some 3,500 letters, on an average, have of late been received daily at the War Office. They are opened in a central Registry, and are then passed on to the department concerned, with such papers as may seem to bear on the particular case. As many letters deal with subjects in which more than one department is concerned, it is obvious that they may sometimes be sent to the wrong quarter. Moreover, as all letters are at present addressed to the Under Secretary of State, this may have increased the difficulty of prompt distribution. Q. 4821,
6936.

The Committee recommend that letters should be addressed to, and answered from, and in the name of, the individual departments concerned.

28. The Committee are satisfied that supervision over the Registry should be a special duty of the Assistant Under Secretary, and that the staff should be strengthened by the addition of an experienced Higher Division Clerk. In making this recommendation, however, they have no wish to reflect on the clerks now employed in the Registry. On the contrary, the Committee think that these gentlemen have displayed great industry and assiduity in discharging very difficult duties without proper system or guidance.

29. Specific suggestions for the conduct of the business of the Registry have been made by Colonel Watson, and appear worthy of consideration. (See Appendix III.)

FINANCIAL CONTROL AND AUDIT.

(a.) *External Financial Control.*

30. The particular questions in the reference under the above heading are:—

- (1.) Whether the existing financial checks on the War Office hinder the efficient transaction of business;
- (2.) Whether the detailed financial audit, as conducted in the War Office, is required by the public interest; and
- (3.) Whether financial business now transacted in the War Office could be delegated to the military districts.

31. External financial checks upon the War Office, which may operate so as to arrest or modify action, may be summed up under the term Treasury control. The queries of the Comptroller and Auditor-General are not of this character. Numerous and detailed as they are, and although giving rise to much correspondence, they are not instituted until after action has been taken, and with a view to report to Parliament. Whether such queries and correspondence may or may not be modified is a matter for Parliamentary consideration.

32. Departmental Treasury control, as it is called, is not concerned in deciding the general total of the estimates. This is settled by the Cabinet, the Secretary of State for War representing the requirements of the Army, while the Chancellor of the Exchequer represents general financial considerations.

33. The total amount of the Army Estimates being once decided, Departmental Treasury control intervenes at the secondary stage. It may be said generally, that the functions of this control are now comprised (a) in seeing that the Estimates are drawn up in the proper form, and with the necessary explanations; (b) in dealing with applications to divert money from the purposes for which it was voted to other purposes; and (c) in authorising, in such instances as seem necessary and advisable, anticipations of Parliamentary authority. The Treasury is further charged with a certain dispensing power in regard to the Royal Warrants, with a general control over all establishments in the public departments, and with the administration of the Superannuation Acts, while, in some cases, action cannot be taken without its authority, although money has been provided in the estimates.

34. With regard to (a), the Committee have no observations to make. It is obvious that some one department must supervise the form of the estimates. As regards (b) and (c), the authority given to the Treasury to anticipate Votes, and to see that the money is expended on the services for which it is provided, results from the procedure of Parliament. The Works Vote is often not sanctioned by Parliament till late in the year, and it is therefore the practice of the Treasury to sanction expenditure upon urgent works in anticipation of the Vote. When the case arises of deficiencies in one direction and savings in another under the subheads of the same Vote, these savings are applied by the War Office to meet deficiencies, without reference to the Treasury. In cases, however, of transfer between Vote and Vote, involving the application of funds to purposes distinct from those for which they were specifically voted, Treasury sanction is necessary.

35. But the Treasury, in addition to seeing that money is applied to the purposes for which it is voted, is charged with seeing that all money voted for the year is spent within the year. Money not spent is surrendered, and finds its way to the Sinking Fund. Attention must be drawn to this practice, because, in respect of certain departments at the War Office, it tends to wastefulness. It is obvious that, with the most careful estimating, it is not always possible for a department concerned with works or stores, &c., to spend in the year exactly the amount estimated. In such an event, provided the money has been issued from the Exchequer, it is open to the department to ask for the amount unexpended to be revoted in the following

year. But this procedure is complicated, can only be taken in respect of considerable items, and is certainly very far from being generally understood. The Committee have ascertained that the system of "carry over," by which unspent balances are placed in a suspense account and carried over to the next year, has been adopted in Germany in the interests of a severe economy, and they recommend that a similar system should be adopted.

36. It would also be an advantage if in the case of new works, as to which there is most complaint, the military districts could be informed in November of the programme of works and of the approximate amounts to be allotted in the estimates of the forthcoming financial year. This information as a rule is not given till February. Consequently there is insufficient time to prepare the plans for the selected works by the 1st April, and contracts are given out too late in the year, when the building season is already advanced.

37. It is with regard to the authority which it is the practice to obtain from the Treasury in certain cases, more especially in connection with works, that the Committee find that unnecessary references arise, and they think that the War Office should be given larger discretion. The intervention of the Treasury in some of these instances is traceable to circumstances which have ceased to exist; and there is reason to believe that the Treasury would readily relax its control in these matters.

38. The Committee, therefore, make the following recommendations:—

(1.) All Works of 5,000*l.* and over should be provided for by loans to be sanctioned by Parliament for specific works, and should, therefore, be taken out of the category of Annual Votes.

(2.) The moneys voted on Army Estimates for works and buildings should be classified as follows:—

Part 1.—New works under 5,000*l.*

Part 2.—Repairs, renewals, and maintenance.

These services should not be detailed, and no reference to the Treasury should be required, so long as the total amount allotted to the various districts is not exceeded.

(3.) The War Office should have authority, and should delegate authority to General Officers Commanding, so far as their districts are concerned, to transfer savings from Part 1 to Part 2.

(4.) Treasury sanction should not be needed for the purchase, sale, or exchange of land or premises, unless the estimated value exceeds 5,000*l.*, as against the present limit of 1,000*l.*

(5.) Treasury sanction should not be needed for the grant of an increased price to contractors under a formal contract, nor for the payment of compensation to a contractor for loss due to departure from the terms of a contract, nor for the abandonment of fines or claims for excess cost of stores purchased in default.

(6.) Treasury sanction should be dispensed with in regard to the rate of interest payable on purchase money for land or premises.

39. The Committee recommend, in addition, that the powers of the Secretary of State, and of General Officers Commanding to write off losses, deficiencies, or over issues of cash or stores in all cases that arise, provided there is no proof or presumption of theft or fraud, be increased as follows:—

	Cash.		Stores.	
	Present Powers.	Proposed Powers.	Present Powers.	Proposed Powers.
	£	£	£	£
Secretary of State - - -	Nil.	20	100	100
General Officers Commanding - -	1	5	10	50

40. The Committee also recommend that the Secretary of State should have power, without reference to the Treasury, to grant rewards to inventors up to 100% in each case instead of 25% as at present.

41. Furthermore, in order to save reference and correspondence, in cases where the amount of public money involved is inconsiderable, the Committee recommend that the Secretary of State be allowed to sanction expenditure, not covered by the regulations, up to a total limit of 5,000% a year, provided that—

- (a.) No permanent alteration of existing regulations is involved.
- (b.) The amount so sanctioned does not involve a recurring charge.
- (c.) The authority is only used for charges which are recognised by the Secretary of State as fit subjects for military expenditure.

42. If these recommendations are accepted, the Committee believe that superfluous correspondence between the War Office and the Treasury will be minimised, and that Treasury control will be strictly limited to what is reasonable. It must be remembered in this connection that Treasury control involves the centralisation in the War Office of correspondence affecting the Army, and prevents decentralisation.

43. An exaggerated impression exists, that Departmental Treasury control has been exerted to an extent and in a manner that has seriously hampered the administration, and impaired the efficiency of the Army. The Committee have found no proof of this, and they have satisfied themselves that the Treasury has strictly confined itself to the action imposed upon it by Parliament.

(b.) *Internal Financial Control.*

Q. 4114,
7071, 7265.

44. Before dealing with the question of War Office audit, the Committee must refer to the suggestion, which has been made, that the Comptroller and Auditor-General might be charged with the entire audit work of the War Office. The Committee do not endorse this suggestion. The Secretary of State is responsible for the proper expenditure of the money voted for his department, and must discharge that responsibility through his own officers and regulations, while the Comptroller and Auditor-General is an independent authority, responsible to Parliament alone, and expressly appointed for auditing the public accounts.

45. This financial responsibility of the Secretary of State is exercised through a system of regulations, to which the special attention of the Committee has been directed. The extreme elaboration of these regulations, and the minute and detailed checks imposed upon high officers, which multiply queries and largely destroy all responsibility, are recognised by the Committee as a main cause of that over-centralisation, with which they deal in another part of their Report.

46. The Committee must preface their recommendations with some explanatory discussion. In dealing with the detailed financial audit conducted at the War Office, it must be remembered that the word "audit" as used at the War Office includes not only audit in the usual sense of the word, but the examination of expenditure with reference to regulations by which it is controlled. It is with this latter duty that the greater part of the Accountant-General's work is concerned.

47. The accounting business of the Accountant-General's Department falls into two large groups. The first group consists of what are called final payments, that is, all payments for supplies, stores, works, &c., over 100% ; these are not effected until after due examination of the account, so that the issue of the money, and its acknowledgment, close the transaction. The second and larger group of payments is made under the system of what are technically called imprests,

i.e., advances of money to individuals, mainly Paymasters, who have to render an account of their expenditure which is wholly, or partially, audited at the War Office.

48. With regard to final payments, these are made on certificates signed by the responsible officers, attesting that the articles are up to standard, and have been duly received. But in the case of works, the bills, although accompanied by the necessary certificates from the responsible officers, are subjected to a so-called professional check in the department of the Inspector-General of Fortifications before being passed to the Accountant-General for examination and payment.

49. The primary authority for a payment in respect of buildings is the certificate of the divisional officer of Royal Engineers, and the only satisfactory professional examination or audit must be that conducted by that officer on the spot. His certificate must form the basis of the claim for payment, and any laxity in the local examination should be checked by occasional local inspection carried out by surveyors under the orders of the Inspector-General of Fortifications. The Committee recommend that the check now conducted by the Inspector-General of Fortifications in Whitehall should be abolished, thus releasing the officials employed upon it for other duties. The examination of the Accountant-General should be restricted to such purely arithmetical checking as may be considered necessary.

50. To pass to the second group of payments, an imprest or advance of money is issued to a Paymaster, who either (1) makes direct local payments under the value of 100*l.*, or (2) issues moneys to captains of companies or other persons, the company officers becoming sub-accountants in respect of the payment of their men.

51. With reference to the direct payments made by the Paymasters, the Committee have no recommendations to make as regards the limit of 100*l.* Q. 3339, 4210. It may be explained that there is some convenience in making all payments over 100*l.* at the War Office, as this system avoids the necessity of transmitting money, and of keeping large balances all over the country.

52. But the question of payments made by sub-accountants requires further consideration. The accounts of the company officers, who act as sub-accountants, are comprised in the company pay-lists. The Committee are decidedly of opinion that these pay-lists are unnecessarily complicated, and they were informed that these complications, while unduly occupying the time of officers, also cause much misunderstanding and dissatisfaction among the men. To take a conspicuous instance, the messing allowance should be treated as pay. Various small deductions or stoppages, *e.g.*, for haircutting, libraries, &c., are a further source of complication, and should cease to be a direct charge against the soldier; while it is also desirable to simplify the various rates of duty pay. Again, too, the present system of accounting for clothing and money compensation in lieu of issues in kind is extremely obscure and highly complicated. It is strongly recommended that these questions should be at once taken up with a view to rendering the pay lists simple and intelligible. These reforms will materially reduce the clerical work of company officers. Q. 8543, 9049, 8169, 8356.

53. The Paymasters now act as auditors in respect of these company pay-lists, and their work, again, is re-audited by the Accountant-General. Formerly this re-audit was applied in full to the accounts rendered by the Paymasters, but it is now limited to $\frac{1}{4}$ th or $12\frac{1}{2}$ per cent. of the accounts. The Committee believe that it could, with safety, be further reduced to 5 per cent. if supplemented by inspections. At the same time, the audit of company accounts would be simplified by accepting as sufficient, the production of vouchers to support the credits taken by the Paymasters, properly classified under the heads of service, subject to the occasional inspection of the pay-lists.

Q. 3319,
4111, &c.

54. Before deciding on these recommendations as to audit, however, the Committee carefully examined the question of principle involved in the conduct of any audit by Paymasters. It may be contended that the principle is objectionable in itself. The Paymaster, indeed, may be viewed in so far as he issues the money to his sub-accountant, as being, in a sense, a disbursing officer on the one hand, while he is the auditor of his own disbursements on the other. But undue weight need not be attached to this theoretical objection. In the first place, the issues by the Paymaster himself are regulated by the demands of the units with which he deals, while the issues made to him from the War Office are regulated by his average requirements. Again, the Paymaster has no interest in the payments for which he issues the money; and the knowledge which he acquires under the present system and his military standing allow him to be of much assistance to young company officers in the matter of accounts.

55. It is, therefore, the Committee's opinion that the Paymasters' audit should continue as before in respect of company accounts, of travelling, and other miscellaneous claims, and that their functions, as disbursing officers, should continue to be limited to making direct payments for contracts, &c. under 100*l*. These disbursements should be effected on the certificate of the responsible officers, which should be accepted by the Paymaster without query, subject to audit.

The Committee further recommend that the Paymasters' examination of travelling claims should be accepted as final, and that any queries that they may raise on doubtful travelling claims should be referred by them direct to the General Officer Commanding for his decision.

Station Paymasters should also be empowered to effect payments of travelling, and other claims, arising within their own areas, which are now made only by District Paymasters.

56. After an exhaustive investigation, however, of the whole subject, the Committee have come to the decided opinion that the main flaw in the present system of an examination and audit is its centralisation at the War Office. This centralisation tends to want of touch between the Accountant-General's Department and the Army; to ignorance of the difficulties felt by the military officers on the one hand, and to misunderstanding on the other; to excessive correspondence, and to undue delay in settling questions.

57. The Committee, therefore, recommend that the work of examination and audit should be transferred from the War Office to the headquarters of the military districts, not only in respect of payments made by Paymasters, but in respect of all store, supply, and clothing accounts now rendered direct to the War Office. The audit should then be conducted at such headquarters by local sections of the Accountant-General's Department, whose audit should be accepted by the Accountant-General as final. The officers of the Central Department of the Accountant-General and of the local sections should not only be interchangeable, but should, in practice, be interchanged. This is a point on which the Committee desire to lay much stress.

Q. 3505,
4001,
4059, &c.,
7399,
7736,
8006,
8536,
8851.

58. The proposal to establish a local audit was discussed at considerable length with the Accountant-General's Department, while the opinion of General Officers in Command of Districts was also taken, by whom it was very favourably received. It must be admitted that the opinions of the Accountant-General's Department, and of Sir Ralph Knox, the late Permanent Under Secretary, are unfavourable to the proposal. But it was not urged that any insuperable difficulties would be encountered in adopting the scheme, and the Committee are convinced that the advantages to be derived will greatly exceed the disadvantages with which it may be accompanied.

59. It was urged that such a system of decentralisation may result in—

(1.) A variety in practice and interpretation at the different local centres.

- (2.) A greater rigidity in interpretation, since the higher officials in the War Office can use their discretion more freely than their local representatives could be expected to do.
- (3.) A greater expense to the public, in so much as the examination of the Accountant-General is now specialised under subjects in Pall Mall, and that this arrangement allows a cheaper agency to be employed than could be utilised at a local centre, where a small staff will have to cope with all the subjects of Army expenditure.
- (4.) A risk of too close relations between the officials of the local sections and the local military officers, whereby the check that is afforded by a removed and sequestered Account Department may be weakened.

60. The answer to (1) is that any variety in practice that may arise will speedily disappear, if the powers of the local auditors are clearly defined, and if inspection visits are made from the War Office. The Committee are informed that no practical inconvenience is encountered in India by the administration of complicated Customs Laws, by the various Local Governments, under the general control of the Government of India, to whom, in cases of doubt, questions of importance are referred.

61. The objections under (1) and (2) are to some extent mutually destructive. Questions outside their delegated powers could readily be referred by the local auditors to the Accountant-General, while the interchange of officers with the War Office, in addition to inspections from Pall Mall, will maintain sufficient uniformity.

62. As to (3), the change recommended will, for the reason given, involve some expenditure. Against any increased expenditure resulting from this measure may be set the economy derived by the reduction that the Committee have recommended of the Accountant-General's re-audit of company pay-lists. And the Committee believe that the total reduction in correspondence and reference, the simplification of the audit, and other advantages, will more than compensate for any increased expenditure.

63. With respect to (4), while the Committee fully recognise that an examining and auditing staff should be distinct from the disbursing staff, and should be under separate departmental control, they emphatically reject the contention that danger must necessarily arise through contact between the two establishments. In India, where the Military Accountant-General and the local controllers are military officers, and work in the military offices, contact is allowed, and has produced no dangerous results. The Committee hold that interchange of views between the military staff of the districts and the adjacent local auditors will be beneficial to both services. It will enable the military staff to avoid errors, and will relieve the examining establishments from the duty of detecting mistakes and of making disallowances, which a timely reference to them may avoid. The Committee are fortified in this view by the expectation on the part of General Officers that the opportunity of consulting the local auditors will save them from many difficulties in which they now find themselves involved.

64. In short, it is anticipated that by a system of local audit, which will bring the audit officials into touch with the Army, a greater appreciation of the practical necessities of military administration on the one side, and of the exigencies of financial control on the other, will be promoted, and that the relations between the two branches of the public service will be materially improved.

65. The establishment of local auditors will evidently harmonise with any such military policy as that recently announced, in so far as this aims at the erection of large commands of an autonomous and self-contained character, and may, in the event of foreign expeditions, work in most advantageously with the general military organisation. It was, indeed, brought to the Committee's knowledge that, during the present war, the want of representatives of the Accountant-General's Department in South Africa has been felt. Such demands would be much more easily met in future, if local

sections of the Accountant-General's Department, accustomed to act independently and equipped with a trained staff, were in existence and could at once respond to any call.

66. The Committee realise that this proposal involves redistribution of the Accountant-General's Department. Probably not less than 150 clerks would be taken out of Pall Mall, and distributed to six or more military centres. Such a change must entail some temporary dislocation of business, but the Committee are convinced that these difficulties are well worth facing, in order to secure the objects they have in view.

67. Suggestions were made that the Paymasters should be removed from the control of the Quartermaster-General, and be placed under the orders of the Accountant-General. The Committee do not view this proposal with favour. It is their belief that military officers are best controlled by military superiors, and it appears that the Accountant-General has sufficient voice, as it is, in the selection and promotion of Paymasters. At the same time it would be an advantage if selected Paymasters could be temporarily employed in the Accountant-General's Department.

68. The Committee have visited the manufacturing departments at Woolwich and have taken evidence in regard to the system of piecework and general work accounts which have been established there. This system appears unnecessarily complicated and expensive, while the quarterly stocktaking in certain departments seems to be scarcely justified by the results obtained. The cost of the central office is not separately shown in the published accounts, which should make a clearer distinction between productive and unproductive expenditure. The Committee are strongly of opinion that the whole system of Woolwich accounts should be made the subject of inquiry by an expert independent authority.

As regards audit, the Committee consider that the Woolwich establishments should be treated as a military district, and that all queries arising should, as far as possible, be locally settled. Personal discussion should be the rule, and a question should only become the subject of correspondence with the War Office when no sufficient explanation can be obtained on the spot.

69. The Committee believe that the recommendations which they have made will do away with unnecessary checks, will promote a true sense of financial responsibility, and will pave the way to a real measure of decentralisation.

CONTRACTS.

70. The Committee have taken a considerable amount of evidence as to the working of the Contracts Branch. This evidence is somewhat conflicting. The friction which it brings to light may in part be due to the pressure produced by the war, and to the necessity for making urgent purchases on an unprecedented scale. The differences and the misunderstandings between the Contracts Branch and the Supply Departments have consequently been accentuated.

While making allowance for these abnormal conditions, the Committee consider, nevertheless, that the present relations between these departments are exceedingly unsatisfactory, and call for immediate re-adjustment.

71. This state of affairs has led, in certain quarters, to the contention that Supply Departments are charged with responsibilities which, under the existing system, they are prevented from fulfilling.

The Quartermaster General and the Director-General of Ordnance are respectively charged, *inter alia*, under the Order in Council of 7th March 1899, with "supplying the Army with food and forage," and with "supplying the Army with warlike stores, equipment and clothing."

It was contended by the Director-General of Ordnance and by other officers, that this responsibility cannot be effectively exercised unless the heads of the supply departments have full powers to make purchases within the limits of the votes that they administer, unhampered by resort to a general and independent purchaser.

Q. 364, &c.,
2304,
2469,
4373,
5664,
6480,
8012.

The Committee believe that, provided that the functions of the Director of Contracts are properly regulated and defined, the grounds for this contention will disappear, and Heads of Supply Departments will be able to discharge their responsibilities satisfactorily.

72. It is the business of the Director of Contracts at the War Office to act as general purchaser for the Supply Departments. His office was established shortly after the Crimean war, and its utility and necessity have been re-affirmed by a variety of Parliamentary and other Committees. A similar office was instituted at the Admiralty in 1869, to act for the Navy Departments (with the important exception of two departments), and is said by the Admiralty to have worked well.

73. The Director of Contracts is not only the general buyer for the requisitioning departments of the Army. He is also a large buyer for the Admiralty, Post Office, Colonies, and India. It is the duty of his branch to keep itself informed of the general state of the market, to maintain a uniform policy in regard to contractors and labour questions, to prevent competition in the market between departments whose requirements overlap, and to seek out new sources of supply. The work of the Contracts Branch is conducted under the supervision of a Parliamentary Officer, the Financial Secretary, who is appointed to deal with all the questions that must arise out of an immense expenditure of public money, involving many interests and competitors. A continuity of policy and uniformity in the treatment of contractors and of labour questions should be secured by the centralisation of all this business in one department.

74. The system of having a buying department distinct from, but the agent of, the requisitioning or using departments is adopted by railways and large business enterprises, although the practice of buying through departmental managers with expert knowledge of special articles is not uncommon.

The Committee believe that, as a general principle, the retention of a central buyer is to the public interest.

75. Exception may, however, be made in the case of the manufacturing departments at Woolwich. Contracts for certain machinery, and stores of a technical character, should be made by the Chief Mechanical Engineer, who is entirely independent of the superintendents of the various manufacturing establishments. He would in effect combine with his other duties the functions of a local Director of Contracts in respect of certain articles. The contracts made by him would be made under the same general rules that apply to the Director of Contracts, to whom copies of the contracts made would be passed for review.

76. The Committee now pass to consideration of the measures which would place the Director of Contracts in his proper position as agent of the Supply Departments.

There are four principal faults in the present system :—

- (1) The prohibition of direct communication, at their own discretion, between the technical officers of the supply or requisitioning departments and the contractors or sources of supply;
- (2) The absence of clear responsibility on the part of any Department for watching the progress of a contract between the acceptance of tender and the due date of delivery;
- (3) The restricted powers of purchase, on their own responsibility, possessed by heads of supply departments;
- (4) The absence of detailed rules or instructions, defining the duties of the Director of Contracts, and the duties of other departments in relation to the Contracts Branch.

77. With regard to (1), the Committee ascertained that the officers of the supply departments are not allowed direct communication, at their own discretion, with contractors to satisfy themselves as to the capacity of

Q. 2331,
2456.

premises, plant, &c., and quality of work. The reason for this prohibition appears to be an apprehension of possible collusion between officials and contractors. Provided that the power to visit contractors is restricted to responsible officers, the Committee are not disposed to attach any weight to this apprehension.

Q. 197, &c.,
443, &c.,
873, &c.,
983,
1800, &c.,
2044,
2070, &c.,
2274.

78. With regard to (2), the officers of the Supply Departments are not allowed to supervise the execution of orders, except in regard to guns made at the works of two particular firms. This prohibition is founded on the same apprehension of collusion. The prohibition in the second case is, however, the more remarkable, because the very thing that is prohibited to the Supply Departments at the War Office is enjoined as a positive duty on the Supply Departments at the Admiralty. These instructions should be rescinded without delay.

79. As regards (3), the Committee also consider it necessary that Heads of Departments should have full authority to decide upon the acceptance of tenders up to the value of 500*l.* in each case. Powers of direct purchases, up to a limit of 100*l.* in ordinary cases, and without limit in cases of urgency, should be given to Heads of Departments. The purchases made in these cases should always be reported to the Director of Contracts, and it will be his duty to point out to the Financial Secretary any matter which, in his opinion, requires comment.

80. Turning to (4),—the absence of any code of detailed instructions,—the satisfactory relations at the Admiralty between the Contracts Branch and the Spending Departments are probably in no small measure due to the clear and comprehensive instructions issued to the Director of Navy Contracts, which are continually revised and kept up to date, and are exhibited in such a manner as to be under the eyes of all officials who have to do with contracts. On the other hand, the various rulings for the guidance of the Director of Army Contracts, and the successive interpretations placed upon them, are scattered through many different papers, and are not readily accessible for general guidance.

To remedy this, the Committee have found it necessary to draw up a set of detailed regulations, on the lines of those in use at the Admiralty. These regulations are appended to this Report (Appendix V. (a)). It is believed that these regulations cover the points, where dispute and misunderstanding are liable to occur.

81. The Contracts Branch has been distinctly overworked for some years past, and more especially during the war. If the recommendations of the Committee are carried out as a whole, the work of the Branch will be reduced. As soon as experience of the working of the new arrangement has been gained, the clerical establishment of the Branch should be reconsidered.

Under the arrangements recommended, the Committee consider it unnecessary to appoint the two travelling inspectors sanctioned recently, for the special purpose of inquiring into the capacities of contractors and into new sources of supply.

82. With a view to ensure the continuous application of sound business principles to the Contracts Branch, the Committee consider that the Director of Contracts should be a man of proved business capacity.

83. Three further points were brought to the notice of the Committee, viz. :—

- (a.) That the specifications for military stores were sometimes unduly rigorous and exacting in minor details; that inadequate discretion is exercised in rejections for trivial and non-essential deviations from specifications.
- (b.) That the War Office, when ordering articles, do not sufficiently avail themselves of trade patterns.
- (c.) That there is a tendency, on the part of contractors, to postpone War Office orders in favour of those given by foreign governments, owing to the greater readiness of the latter to make payments on account.

84. As regards (a), the Committee think that in some cases specifications are too minutely drawn, and are too rigorously enforced. The inspectors appear not always to exercise a reasonable amount of discretion in regard to unimportant deviations from specifications. It is not possible for the Committee to make any recommendation on this point. But the Director-General of Ordnance informed them that he was fully alive to the difficulty, and he is anxious to meet it, so far as the requirements of the service allow. The Committee wish, however, to point out that their informants were unanimous in stating that the Admiralty inspectors were more ready to take responsibility than those of the War Office. This may partly be due to a habit of referring questions to superior authority, which is, perhaps, unduly prevalent among Military officers, and partly to the more practical training of the Admiralty inspectors. The Committee consider that it would be an advantage if the Military inspectors were attached for a time to the manufacturing departments, so as to gain knowledge of the processes of manufacture.

With reference to (b), the Committee recommend the adoption of trade patterns whenever possible; but they were informed that when sudden and large demands arise for certain articles, it is not necessarily advantageous to select the trade pattern of a particular firm, the supply of which is liable to be exhausted.

As regards (c), the Committee recommend that clauses providing for payments on account should, as a general rule, be inserted in all important contracts.

85. The Committee reserve the question of conferring larger powers upon General Officers in the matter of contracts to be discussed in the section of the Report dealing with Decentralisation.

CLERICAL ESTABLISHMENT.

86. The clerks in the Civil Departments of the War Office are divided into a Higher and a Second Division. There still exist a few Higher Division clerks who have been recruited under obsolete conditions. These, however, are fast disappearing, and the Higher Division clerks will soon constitute a uniform body. Their number has been reduced from 150, at which it stood in 1878, to 55; and they are now only employed in responsible positions where men of good standing and education are required.

But though the method of recruitment is the same as that in the case of the Treasury or Colonial Office, and other Public Departments, the scale of salary is lower than the scale laid down by the Ridley Commission, Q. 4862, which prevails in those offices. The War Office should not be placed at 5169. a disadvantage, as compared with other Departments, in securing the best candidates. The Committee recommend that the Ridley scale should be generally adopted for the War Office.

87. Representations were made to the Committee by the Second Division clerks, with regard to their scale of pay and to the system of promotion. The Committee did not feel justified in investigating the basis of a scale of pay, which has been laid down for Second Division clerks throughout the Civil Service. In regard to promotions, however, the Committee think that the recommendations of Heads of Departments, both Military and Civil, should be systematically recorded, and should be considered when vacancies occur.

88. The present clerical constitution of the Military Departments is unsatisfactory. Higher Division clerks are employed in posts where military officers should be employed, and Second Division clerks and soldier clerks are distributed on no principle.

Civilian clerks of the Higher Division have hitherto been retained in the Military Departments at the desire of the Military Heads. But a change of opinion has taken place on this point, and the Committee endorse the view that the posts of Higher Division clerks, as opportunities occur, should be taken by junior military officers. Q. 4875, 5137, &c., 5506, &c., 6944, 7266.

89. Civilian clerks stand for continuity, and, if they are displaced, continuity must be secured by arranging that the military officials in a department should not all be changed at the same time, but that one officer with experience should always be left in each branch.

Military officers employed at the War Office should not be withdrawn, even in the event of active operations, except in cases of real urgency. These posts should not be used as stepping stones to employment in the field, at a moment when the whole organisation of the War Office is strained by military operations, and when changes are least desirable.

Q. 5136, &c.,
5506, &c.,
6830,
7268.

90. Conflicting evidence was given as to the relative advantages of employing civilian clerks of the Second Division or soldier clerks in the Military Departments. The Committee recommend that soldier clerks should be employed as far as possible in these Departments, except where the Heads for special reasons prefer civilian clerks. Thus it was pointed out in evidence, that it is desirable to employ civilian clerks in branches, which deal with reports on the character and discipline of officers, or where the movements of troops are concerned.

Q. 5130.

In regard to the doubts expressed in some quarters as to the qualifications of soldier clerks, there seems reason to believe that the Army can supply the class of men required, if adequate care is taken in the selection.

DECENTRALISATION.

91. The main weakness of the existing system of administering the Army lies in the absence of a clear and effective recognition of the responsibility of General Officers Commanding, for administration as well as for command, within their respective districts. The duties of General Officers Commanding are thus defined in the King's Regulations, para. 156 :—

“General Officers Commanding are the representatives of the Commander-in-Chief within their commands, and, subject to these regulations, are responsible for the—

- “ (i.) Discipline and the efficiency for service of the troops.
- “ (ii.) Maintenance of uniformity of system in all branches of the service.
- “ (iii.) Maintenance of armaments, works, and buildings.
- “ (iv.) Compilation of the necessary estimates.
- “ (v.) Economical control of all expenditure, whether money, supplies, or stores.
- “ (vi.) Arrangements for mobilisation and maintenance and efficiency of all mobilisation equipment.
- “ (vii.) Organisation and preparation for defence of all fortified places within their commands, in accordance with such instructions as may from time to time be issued.
- “ (viii.) The professional training of the officers and soldiers under their command, and the establishment of a proper system of regimental instruction.
- “ (ix.) Administration and supervision of the Recruiting Service within their commands.”

92. The responsibilities of General Officers Commanding, as laid down by the above regulations, are very comprehensive; but the general terms in which they are described, afford no guidance as to the extent to which the War Office may exercise detailed control over the performance of these duties assigned to Generals. Thus the administrative position and power of the Generals, and the scope and nature of their duties, are determined more by the manner in which the War Office exercises control, than by the definition of these duties in the Regulations. The Committee, however, feel bound to add that, in some cases, Generals appear either to be ignorant of the powers they already possess, or to be reluctant to exercise them. Failure on the part of Generals to make full use of their powers inevitably leads to centralisation.

93. The Committee think that it is most undesirable that any work should be done in the War Office, which falls within the limits of the duties assigned to the General Officers Commanding. The action of the War Office, as regards matters within those limits, should take the form of general supervision, and should never descend to actual performance of work of detail, which can better be done in the districts.

94. The General Officer Commanding should, within his district, exercise administrative responsibility and control to the full extent of his powers. He should be allowed the greatest possible freedom as to the time and manner of expending the money allotted to his district on the various services for which it is provided.

He should, in all matters within his functions, be encouraged to act on his own discretion. The result to be aimed at is to make the General Officer Commanding responsible for the general efficiency of his command, and this efficiency should be watched and tested from the War Office by thorough and systematic inspection.

95. This view of the position to be assigned to the General Officers Commanding is not novel. It was laid down clearly, and with much emphasis, in the Report of the Decentralisation Committee of 1898. That Report formulated two important principles as follows:—

“The General Officer should have real control within his district, subject to general regulations, and the audit of his accounts. . . . The control of the War Office over the districts should be secured by constant inspection, whether in questions of military training, of the execution of works, of stores, or of accounts. It is by inspection, and not by returns and reports, that a General Officer’s administration of his command can best be judged.”

96. Little, however, has been done to carry these principles into effect. The Committee heartily endorse them, and have endeavoured to indicate the lines on which practical action can be taken. The moment, indeed, for a real step in the direction of decentralisation appears propitious, in view of the contemplated regrouping of the military districts.

97. Too much stress cannot be laid on the recommendation that inspection should be substituted for returns or reports. The principle of inspection is a vital and integral part of any scheme of decentralisation. Its adoption necessarily involves the provision of machinery for inspection of the various branches of the Service.

Inspection should judge by results, and it should, therefore, be separated from administration. Highly qualified officers should be charged with the duties of inspection, and should be supplied with the proper staff to assist them. It should be distinctly laid down that the duties of these officers should be confined to inspection, and that, as regards all matters affecting the personnel of the Army, they should report direct to the Commander-in-Chief.

98. The evils which result from the present system of centralisation are clearly marked. The constant flow of detail matter, with which the War Office is flooded, unduly occupies the time of the higher officials. Larger questions are consequently insufficiently considered; while the habit, that is engendered throughout the Army, of seeking authority for every action must destroy the due sense of individual responsibility which it is so important to inculcate in a modern army.

99. If decentralisation were thoroughly carried out, a complete change would be effected in the duties now carried on at the War Office. The time of the Headquarter Staff would no longer be, as now, entirely devoted to the details of administration. Small matters of routine would disappear, and, as a result, fewer officers would be employed upon the administration of the Army, setting free the remainder for the consideration of those important questions, regarding preparation for war, which form so large a feature in the work of the General Staff of foreign armies. Moreover, the War Office should, to a great extent, cease to be the post office for the vast correspondence on matters of detail—personal and other—which is always passing between the public and

the Army. The passing of this correspondence through the War Office merely involves delay and unnecessary labour. The public should be led to address their inquiries, as far as possible, direct to the Headquarters of the district in which the subject of their inquiry is located.

100. It must, however, be admitted that there are certain conditions in our service which produce obstacles to decentralisation. One difficulty in the way of decentralisation lies in the fact that the administration of various corps like the Royal Artillery, Royal Engineers, Army Service Corps, Army Ordnance Corps, is centralised. The organisation of these corps is a matter that lies beyond the Committee's reference, but it is clear that, from the point of view of decentralisation, much would be gained, if the administration of their regimental details were transferred to districts.

Foreign service, foreign reliefs, and the movement of units in the United Kingdom necessitate a certain amount of reference to the War Office, whilst the centralisation of financial authority and the detailed exigences of Parliamentary control have been powerful influences in the same direction.

101. Considerable correspondence and reference arises at present with regard to the movements of troops within districts, and from one district to another. There seems no reason why these moves should not, as a rule, be left to General Officers under the general direction of the War Office. Frequent moves, which hinder decentralisation, and involve constant expense, both to the State and to the individual officers, should be avoided; and to this end, as well as in the interests of efficiency, it is most desirable that facilities for training and manœuvring should be provided in the districts, if necessary by a Manœuvres Act.

102. The Committee have already drawn attention to the mass of minute and complex regulations, under which the Army is governed. The simplification of these regulations is essential to decentralisation. A standing committee, including officers from the districts, should at once be appointed to deal with this important matter. The consolidation, as far as is possible, of pay and allowances should be particularly kept in view.

Q 8006.

With regard to minor financial regulations, it has already been recommended in this Report that doubtful travelling claims should not be disallowed by Paymasters without reference to the General. The Committee would extend this principle. They have been much struck by the enormous correspondence and great dissatisfaction involved in the recovery of small items that have been disallowed. These recoveries from officers or men, who may have been transferred to Foreign Stations, involve an outlay of time, stationery, and postage, often exceeding the amount recovered. The decision of a General on the interpretation of regulations should be treated as final, except in the case of large items, and no recoveries should be made on disallowances by the War Office, in respect of any items authorised by the General, who should be held professionally responsible.

The grant of working and extra-duty pay, within the maximum and minimum of the rates laid down by the regulations, should be a matter for the discretion of the General and should not require reference to the War Office.

Q. 8924, &c.

103. In order to confer upon the Generals further financial freedom, the Committee recommend that a sum of 250*l.* a year should be placed at the disposal of each General Officer, to be expended at his absolute discretion, provided the expenditure is for military objects, does not violate regulations, and is of a non-recurrent character. General H.R.H. the Duke of Connaught laid stress on the point that this system works well in India, and believes that equally good results might be expected elsewhere. The amount is not large, and the items it would cover would be inconsiderable. But it is just these items that cause undue correspondence, and generate friction.

104. The powers of General Officers in dealing with contracts should also be enlarged and defined. The Decentralisation Committee of 1898 recommended that General Officers should have powers of dealing with contracts for works up to a limit of 2,000*l.* This recommendation was carried out, but not without qualifications. The Generals are given little voice

in the formation of the list of contractors. A General may have good reason, based on experience, to object to a particular contractor. But as he is obliged to accept the lowest tender from a number of competitors, who, being all on the War Office list, are *ex hypothesi* all good and capable, the General may find that the work, for which he is responsible, is handed over to the very individual he distrusts. General Officers should have the same authority in the formation of the list of approved contractors, as has been laid down for Heads of Supply Departments. The limit of works contracts with which they may deal should be extended to 5,000*l*. Q. 7650, 8163, 8658.

105. In respect to the execution of works, the authority of General Officers is restricted, and the amount of reference from the districts to the War Office is unnecessarily large. Power should be given to General Officers to carry out, subject to inspection, all authorised works (except defence works), up to a limit of 5,000*l*. That is to say, when once the annual grant has been allocated to the district, Generals should, on their own responsibility, and at their own discretion, arrange for the execution of authorised services. The control of the Inspector-General of Fortifications should be exercised, as far as possible, by means of inspection. Power should be given to General Officers to purchase building stores up to 250*l*. instead of 50*l*. the present limit. The discretion of the General in dealing with re-appropriations of barrack accommodation should also be made clear, and should be made as wide as is consistent with general uniformity of barrack policy.

106. Questions relating to land also appear unduly centralised at present. These should be settled in a district by the General Officer, and he should have power to employ the services of a local land agent and solicitor.

107. Generals should also have discretion to make occasional local purchases of general stores and articles, excluding munitions of war and clothing, provided the local cost does not exceed the price at which they could be obtained from Woolwich. Such articles should be examined and passed by the local ordnance officers in the district.

It would greatly promote economy and the sense of responsibility, if Generals were to be given an annual money credit for stores, of which there is now a prescribed annual allowance. This money credit could be apportioned among the various units in the district. At present a unit, *e.g.*, a battery, is annually supplied with a regulation number of articles calculated on the average life of the articles. Under this system, there is no inducement to a Commanding Officer of a unit to economise. Wear and tear may fall more heavily on certain articles in one year than in another, yet no matter how much he may save on certain articles by careful management, he will not have one penny more to spend on other articles for which there may be an exceptional want. There is no elasticity in the system, and vigilance is not encouraged. Q. 8045.

108. The Committee are well aware that their general proposals with regard to decentralisation might be met by the objection that the result would be to throw a mass of business hitherto transacted by the War Office upon the districts without providing any machinery for dealing with it.

There can be no doubt that, as it is, the office work of the General and of his staff is unduly heavy. Purely administrative duties encroach upon their time, at the expense of vitally important duties in regard to the preparation of the Army for war. Staff Officers occupied for many hours daily in dealing with matters of military routine or with those arising in regard to supplies, barracks, and land, cannot be expected to devote sufficient time to the study of questions relating to the higher duties of their profession.

109. Any real measure of decentralisation will entail considerable changes in the present organisation of the Staff. In the German Army, the General Officers commanding Army Corps are relieved of a great mass of business which falls upon the Intendantur. On the other hand, much of the detail work connected with military routine is discharged by the Adjutantur Staff, leaving the General Staff free to study the problems of war. In dealing with business duties, the Committee believe it to be a necessary consequence of Q. 7766, 8983.

the large scheme of decentralisation, which they advocate, that the General Officers should be provided with an adequate business staff under an officer corresponding to the Intendant. To this officer the General should delegate the business administration of his district, and should thus find himself more free than he is now to devote his time and energy to securing the military efficiency of his troops. The creation of such a staff may involve expense, but this should be met from reductions at the War Office which should result from the Committee's recommendations.

GENERAL CONTROL AND DIRECTION OF THE WAR OFFICE.

110. The most important recommendation of the Committee, and that upon which the practical success of their proposed reforms must depend, has been left to this section.

The last instruction contained in the reference requires the Committee, "To report any other amendments of procedure in connection with the aforementioned subjects which would bring the work of the War Office more into harmony with that of large business undertakings."

This instruction imposed on the Committee the duty of considering the methods of superior control and direction at the War Office.

111. The vast extent and the great diversity of the work centred in the War Office differentiates it from that of a large business undertaking only in degree, and there is no reason to doubt that the methods adopted in the latter for securing efficiency and economy could be effectively employed in the former; while it is clear that, as regards central control and direction, the present methods of the War Office are conspicuously out of harmony with the best business practice.

112. The Committee have already insisted upon the necessity for dividing the work of the War Office into well-defined sections under responsible heads. This is the first essential.

The co-ordination of the work of the various departments for the purpose of general control is equally essential. This implies (a) the focussing of all important questions for the decision of the Secretary of State, and (b) the discussion of matters involving two or more departments before executive action is taken by the heads concerned.

113. The business of the War Office appears to fall naturally and logically into three military and two civilian groups.

(Military.)

1. *Military Policy*.—Questions of Imperial and Colonial defence, the study of problems of military organisation, intelligence, mobilisation, and the strategic use of railways.
2. *Personnel*.—Recruiting, discipline, training, inspection, appointment and promotion of officers, and recommendations for rewards.
3. *Matériel*.—Supplies, transport, works, lands, ordnance, and remounts.

(Civilian.)

4. Financial review and criticism, accounts, audit, estimates, and contracts.
5. Secretariat, registry, and Parliamentary work.

This grouping of military work follows that which has been adopted by other Powers, and is analogous to that which has been found to work well in India where the military administration has been far more stable than at home.

114. There can be no proper general control and direction of these great groups of business unless the relations between the departments dealing with them are placed on a satisfactory and a durable basis.

115. The work of the great Departments at present constantly overlaps, and it is impossible to trace any systematic co-ordination between them, except, perhaps, that intended to be provided by the theoretical supervision of a Commander-in-Chief who is overweighted with other duties more properly appertaining to him, or by the somewhat fitful action of the Army Board. The zeal and goodwill of the great officers at the head of these Departments cannot alone supply this want.

116. This want was so sensibly felt that an attempt was made to supply it by meetings of Heads of Departments, known as the Adjutant-General's meetings, the abolition of which was deplored before the Committee by Sir Evelyn Wood and by Sir Redvers Buller. These meetings were informal, and they came to an end in 1895 with the repeal of the Order in Council of 1888. Q. 5520, 8231, &c.

117. The work of the three Supply Departments, which might admit of better distribution, could possibly be brought together under one military head. The functions of the Head of the Supply Departments variously known in past times as the Master-General of Ordnance or Surveyor-General, would then be revived. That office, after a long existence, was abolished in 1887, by which time it had ceased to be held by a high military officer as was originally intended. Q. 5416.

If the office were re-constituted under a high military officer, he would be charged with the general supervision of the three Supply Departments, and the co-operation and co-ordination of these Departments would thus be secured.

There would be certain advantages in this measure, but it is not denied, that the creation of such an office would affect the direct responsibility to the Secretary of State, which is vested in the Heads of the three Departments in question by the existing Order in Council.

118. The administration of the War Office on the principles laid down requires a central co-ordinating authority under the Secretary of State. In a large business undertaking, whose central authority rests in a Board of Directors, a clearly defined and rational division of business responsibility is maintained among the departments with close association and union for a common object. For the constitution of such a Board the War Office offers peculiar advantages, as the majority of its members would have technical knowledge.

119. There have been some attempts made to secure this form of administration at the War Office.

The Hartington Commission of 1890 reported as follows:—

“For the purpose of securing unity of administration and strengthening the consultative element in the War Office, we recommend the establishment of a permanent War Office Council under the presidency of the Secretary of State, of which the Parliamentary and Permanent Under Secretaries and the Financial Secretary, as well as the above principal military officers would be Members. One of the principal functions of this Council would be to secure the harmonious working of the several branches of the War Office in all cases in which they are collectively concerned. The proceedings and decisions should be formally recorded.”

This recommendation was never carried out in its integrity, though a War Office Council and also an Army Board were subsequently formed and now meet intermittently. Two boards of management are not compatible, however, with efficient business procedure.

120. Moreover, the existing War Office Council and Army Board have extremely limited powers. They have no rights of initiative and no well defined responsibilities beyond that of giving advice to the Secretary of State when requested to do so on matters referred to them. Notwithstanding the limited powers of the Army Board, evidence of weight and value has been given to the Committee, by both the Military and Civil branches of the War Office, as to its extreme utility, especially during the War. Q. 5225, 5521, 6962, 7291.

121. The Committee are satisfied that, under the existing Parliamentary conditions which determine the principles upon which the British Army is raised, maintained, equipped, and financially controlled, there must be both a military and a civilian element at the War Office. The efficiency of the

service can only be secured by blending these two elements into one body for superior administrative purposes.

122. For this purpose a permanent Board should be established, to supersede the War Office Council and Army Board, consisting of the heads of all the great departments, military and civil, to be known as the "War Office Board."

123. The Board, while in no way impairing the authority and powers of the Secretary of State or of the Commander-in-Chief, should secure the harmonious working of all the great Departments, Military and Civil.

124. The Secretary of State should be the President of the Board, and would attend and preside when he thought fit.

The Commander-in-Chief, who is the chairman of the existing Army Board, should, in the absence of the Secretary of State, be the chairman whenever important questions demand his attendance, and would, with the military Heads of Departments represent the Army; the Permanent Under Secretary of State should be deputy chairman, providing for the continuity of the business of the Board, and representing with the Parliamentary Under Secretary, the Financial Secretary, and the Accountant-General, the Civil element of the War Office. Thus the deliberations of the Board would have the advantage of expert knowledge on every subject, whether from the Military or Civil side.

125. The War Office Board as proposed would differ fundamentally from the War Office Council or Army Board as at present constituted. Its functions and the scope of its duties should be as follows :—

- (1.) The Board should be charged (under the Secretary of State) with the supervision and control of the working and management of the War Office, with the consideration of the annual estimates prepared by the Heads of Departments, and with the allocation of the sums allotted for military purposes.
- (2.) The members of the Board should be empowered to bring before it any important question affecting their Departments, and the Board as a whole should consider and decide any proposal submitted to it, subject to the approval of the Secretary of State. The assistance of General Officers Commanding should be called in when required.
- (3.) The Board should not attempt to deal with matters of routine or minor questions. It would appoint committees, not only of its own members, but of other officials, heads of departments or branches, or even officers outside the War Office, and would delegate to them the consideration of any proposal, or the arrangements for carrying out any decision.
- (4.) The financial criticism of any proposal before the Board would be considered *pari passu* with the proposal itself, so that the whole subject would leave the Board for the Secretary of State's decision in a complete state.
- (5.) The recommendations of the Board should be directly submitted to the Secretary of State by the Chairman or by the Deputy Chairman. A complete record of the proceedings and decisions of the Board should be kept for the information of the Secretary of State, and any dissents should be recorded.

126. The Permanent Under Secretary should be responsible for calling the Board meetings regularly, and for supervising the agenda, which the secretary of the Board should prepare. He should be charged with seeing that any decisions, whether of the Board or of the Sub-Committees, were carried out, and it should be his special duty to ensure the regular and punctual performance of their functions by all sub-committees, permanent or temporary, that might be appointed.

127. The Heads of Departments would, as now, be responsible for the executive working of their own departments to the Secretary of State. Their individual responsibility would be still further defined if, as recommended by the Hartington Commission, each Head of a Department were "required to prepare an annual report to the Secretary of State as to the condition and working of that department. This practice would tend to mark that individual responsibility for well-defined duties which we desire to enforce, and the collated reports would form a useful foundation for the memorandum, which is now annually presented to Parliament, to the continuance of which in a complete form as a review of past proceedings and proposed policy, we attach considerable importance."

These reports would afford a test of military progress and efficiency.

128. With a view to ensure its permanency, the War Office Board should be formally constituted, and placed on an authoritative basis as an integral part of the War Office.

129. The constant changes in War Office organisation, and the want of continuity either in administration or in policy, are, in the opinion of the Committee, principally to be ascribed to the absence of any permanent body entrusted with adequate powers and competent to advise the Secretary of State as to necessary reforms, and as to the way in which they should be carried out.

130. The Committee have, therefore, carefully defined the constitution and duties of such a permanent body, and it is to the formation of the War Office Board, and to the efficient discharge of its duties and exercise of its functions, that they look for the practical application, under the authority of the Secretary of State, of their proposed reforms and for continuous satisfactory administration.

131. The principal recommendations of the Committee may be summarised as follows:—

- I. To abolish the present system of ruling the Army by minute regulations—both military and financial—and by elaborate reports, which conduce to centralisation and to excessive correspondence.
- II. To simplify all such regulations as cannot be dispensed with.
- III. To create a system of supervision by means of effective inspection which should secure efficiency without destroying responsibility, and would subject the value received for public expenditure to a practical test.
- IV. To define more clearly the powers and duties of the Heads of Departments and their relations to each other, and to give them responsibility for the interpretation of regulations.
- V. To place a branch of the Accountant-General's Department in close touch with each spending Department, so as to give the Head of that Department financial advice and direct knowledge of the progress of expenditure under his Votes.
- VI. To simplify the Company Pay Lists, and to relieve the soldier from small stoppages, which give rise to discontent and misunderstanding.
- VII. To increase the financial power of the Secretary of State and of General Officers Commanding by providing an annual sum to cover small items of unforeseen expenditure, which give rise to much reference and correspondence.

- VIII. To abolish reference to the Treasury in certain cases, so as to reduce what is known as Departmental Treasury control to the *minimum* needed to meet the real requirements of Parliament.
- IX. To re-arrange the Works Vote, so as to secure greater elasticity, and to carry over unexpended balances, in order to prevent a tendency to wasteful expenditure at the close of the financial year.
- X. To bring the War Office into touch with the Army by transferring branches of the Accountant-General's Department to the Military districts, to conduct a local examination and audit of accounts, and to give such financial assistance as may be required, thus relieving the War Office of a great mass of work.
- XI. To reduce the audit of company pay-lists to 5 per cent., supplemented by local inspections.
- XII. To bring the relations of the Contracts Branch and the Supply Departments within the scope of definite regulations, which the Committee have drawn up, and to increase the powers of the Supply Departments in certain respects.
- XIII. To remove the Higher Division clerks from the Military Departments, replacing them by Military Officers, with the proviso that adequate continuity is preserved.
- XIV. To replace Second Division clerks in the Military Departments by carefully selected soldier clerks in all cases except where the Heads of these Departments consider that, for special reasons, civilian clerks should be retained.
- XV. To place the Central Department under the direct supervision of the Assistant Under Secretary of State, and to strengthen the central Registry.
- XVI. To enlarge the powers and responsibilities of General Officers Commanding Districts, so as to secure decentralisation to the fullest extent possible in the special circumstances of the British Army.
- XVII. To provide an adequate staff for the Military districts, so as to enable the administrative business devolving upon the General Officers Commanding to be transacted, without withdrawing them from their main duty of training and preparing the Army for war.
- XVIII. To relieve the War Office, by decentralisation, of a mass of routine work and correspondence, which now absorbs the energies of high officials, and prevents their due consideration of important questions of military policy.
- XIX. To establish a "War Office Board" on a permanent basis, with clearly defined duties and powers, which, acting under the authority of the Secretary of State, and without in any way detracting from the individual responsibilities of the Commander-in-Chief and of the Military Heads of Departments, would control and supervise the business of the War Office as a whole.

132. The Committee have now concluded their labours. They have made important recommendations involving large changes, both in the War Office itself, and in the military districts, where the immediate government of the Army should be carried on. They believe that these changes, if adopted, will have far-reaching and beneficial effects both upon the War Office and the Army. But they are fully conscious that into any system of administration, however theoretically perfect, the personal element must largely enter. They wish, therefore, to draw attention to the importance of selecting for posts at the War Office officers who have shown administrative, as well as military, capacity, and thoroughly qualified Civil officials. Upon the care and judgment with which these selections are made, upon the ability displayed by officials of all degrees, and upon their loyalty to the system which they have to administer, must largely depend the successful working of the War Office, and the permanent efficiency of the Army.

133. The Committee desire to record their sense of the very valuable assistance they have received from their Secretary, Mr. H. J. Gibson.

CLINTON E. DAWKINS,
Chairman.

COMMITTEE ON WAR OFFICE ORGANISATION.

Digest of Evidence.

9th January to 20th March, 1901.

LETTER of REFERENCE from the SECRETARY OF STATE and LIST of HEADINGS under which the Digest has been arranged.

1. Whether the present method of conducting the administrative and financial business of the War Office and its distribution as between the Civil and Military Departments is satisfactory.

2. Whether the detailed financial audit as conducted in the War Office is required by the public interest; and whether the existing financial checks on the War Office hinder the efficient transaction of its business.

3. Whether the office of the Director of Contracts should deal with all the business now transacted there, or whether the making of contracts could be in whole or part transferred to the Military Districts or to the Military Departments of the War Office.

4. Whether (with or without a transfer of staff) any of the administrative and financial business now transacted in the War Office could be delegated to the Military Districts.

5. Whether any change in the numbers, status, and pay of the clerical staff is desirable.

6. Whether Military Officers and Military Clerks should be substituted in any degree for the present trained Civilian staff.

1. Conduct of business in the War Office:

- (a) Administrative.
- (b) Financial.

2. Financial Control and Audit:

- (a) External financial control.
- (b) Internal financial control.

3. Contracts:

- (a) Existing system.
- (b) Transfer of contracts to Military Departments.

4. Clerical Establishment:

- (a) Present numbers, status, and division of duties.
- (b) Substitution of Military for trained Civilian staff.

5. Decentralisation:

- (a) Local audit.
- (b) Transfer of contracts to Military Districts.
- (c) Delegation of control to Military Districts.

MR. ALFRED MAJOR.

3. CONTRACTS.

(a.) Existing system.

The business of his Department is to supply goods, according to specifications, on demands made by the various districts and departments, 14, 95; when contracts are delayed, it is the custom to send an Inspector to see what progress is being made, 18-24, 264, 268; has never known a case where a contractor refused to give full information to representative of Secretary of State, 25; contractors usually execute their orders in the time promised, 26-33, 63-68; penalties for delay in executing contracts are enforced in a good many cases, 46-51, 62; if goods are not delivered in time the Director of Contracts buys in default and charges the manufacturer with the excess cost, 51, 62; cases of delay in delivery are generally reported by the purchasing department, 61; does not think the system of inspection as applied to goods supplied is too severe, 74-76; it is his duty to know the sources of supply, and to have them available when required, 77, 85; thinks that duty is better discharged by a central department, 78; the distribution of orders between the manufacturing departments and the trade is done at an allocation meeting held at the beginning of the year, 86, 262, 263; districts have power to purchase stores locally up to 50*l.* in value, and the Principal Ordnance Officer at Woolwich up to 25*l.*, 92; the local food supplies procured by Generals in the districts are only for current needs of troops, 102, 230; the majority of district contracts are correct, 111-13, 326; the selection of firms from whom purchases are made is, as a general rule, made by the Director of Contracts, 123-6, 145-52; the Director of Contracts buys what he is requested to buy; he does not decide on questions of necessity for purchase, 129, 130, 240; at the suggestion of the Director of Contracts specifications are frequently modified, 137-44; has no difficulty in normal times in getting an adequate supply of contractors to tender, 154; price

MR. ALFRED MAJOR—continued.

is not necessarily the governing consideration, time of delivery and other things are taken into account, 156-72; does not think as a general rule that contractors consult with each other as to the prices to be put in, 175-80; thinks as a rule, that he buys very cheaply, 181, 344; it is the duty of the receiving department to see that the contracts are executed according to terms, 197-211, 217; considers his responsibility is at an end when a contract is made unless communicated with by the receiving department, 203, 272; does not think it would be expedient or necessary to have an inspection before goods are taken into store as well as an inspection by the using department, 212; thinks the present arrangement of one person buying what he considers to be right and another department saying whether they are the articles required is the best principle that can be carried out, 216; has had no complaints of delay between the receipt of requisitions and the placing of contracts, 226, 276; thinks the system now followed in the distribution of the business as regards contracts works very well, 237; it would save a certain amount of complication of work, and thinks it would result in economy if the contract bills were audited in his Branch, 241, 242-8; thinks that the maintenance of the Director of Contracts as buyer for all is a most useful check upon all consuming departments, 253-6; contractors' premises are not to be inspected without the concurrence of the Contract Branch, 267; the present system of having an independent Branch in the War Office to check the material ordered by another Branch often results in a reduction in cost of materials, 278; the practice followed by the Director of Contracts, as a buyer, is analogous to that adopted by great commercial firms, 282-4, 342; the Director of Contracts never deals with technical questions, though he frequently advises on technical matters, 296; depends upon reports as to sub-letting, 306; buys for other departments besides the War Office, 357.

Mr. ALFRED MAJOR—continued.

During the year 1900-1, 42,285 tenders were received for consideration, 86,000 letters, and 199,000 papers, 1698; details of an arrangement by which copper was for some time bought through a broker at an assumed extra cost to the Department; owing to the death of the senior partner of the firm that arrangement has now been terminated, 181, 1701-3, 1747-66; steps are always taken to find out whether tenders come from middlemen, 1711; when continued trials are allowed to contractors it is with a view to maintain competition, 1722-6; having made the contract, the question of delivery is left with the department requiring the supplies, and in cases of serious delay in the delivery of materials it is incumbent on the Ordnance Factories to report the matter to the Director of Contracts, 1729, 1730; the Secretary of State does not think it desirable that visits should be paid to contractors' premises without previously consulting the Contract Branch, 1700, 1733-46.

Before putting a new firm on the list makes inquiry of their bankers as to their financial position, and of firms for whom they say they have executed orders, inspects their works, if he can; if all answers are satisfactorily answered, gives the firm a small trial order to see how they get on, 2780-2; in cases of disagreement with the Director-General of Ordnance as to infliction of fines, always refers to the Financial Secretary, 2783; fines have been imposed to a greater extent lately, because circumstances have required it, and have called for them, 2784; in the case of disagreement with a department in reference to the acceptance of a tender, would refer the matter to the Financial Secretary, 2786, 2787; his duties are arranged in a general statement of procedure founded upon the Orders in Council, 2789; there is no necessity for the issue of further and more definite instructions in regard to contracts if the departments will loyally carry out their duties, and leave the Director of Contracts to carry out his, 2788-96; has no hesitation in saying that in regard to all the cases cited by the Principal Ordnance Officer the Contracts Department could have done better than he did, 2794, 2857-84; details with regard to the alleged delay in the provision of tents and of the multiplication of orders with firms unable to carry them out; when the normal demand is for only 4,000 tents in the year, it is impossible so to develop the trade as to procure 50,000 in the course of four or five months, 2798-809; details with regard to delays in the provision of tent mallets, 2810-22; had samples of the tent pins bought by the General Officers Commanding sent to Woolwich for inspection, where they were found to be defective in five particular points; not one of them would have been passed by the Inspection Department, 2825; details in regard to purchases of bedsteads by the Principal Ordnance Officer 2823-8; details in regard to the local conversion of mule harness, 2829-49, 2921; details in regard to the purchase of horse-hair by the Principal Ordnance Officer; as his power to purchase extends to only 25%, he should not have purchased horse-hair up to 2,000% without reference; the Contracts Branch could have carried out the service more quickly, 2850-66, 2978-80; details in regard to the purchase of six corn crushers by the Principal Ordnance Officer, the Director of Contracts could have purchased them much more rapidly, 2867; details in regard to the delay in procuring slings for stretchers; the delay in that case was defensible, 2885-905, 2910-4; even in time of war the system of tender is the most expeditious; it shows what people are prepared to do, it brings about competition, it discloses the existence of firms which enables orders to be spread out, so that they can be executed in the required time, 2906-9; the mule harness sent to the Cape from home, and bought by the Director of Contracts with the concurrence of the Director-General of Ordnance has been in all respects satisfactory, but the supplies bought locally at the Cape which came, presumably, from America and Walsall, were rubbish, 2917-32, 2985-90; details in regard to the purchases of axes and hammers, 2934-42; with regard to the distribution of orders for clothing, has no objection to referring every contract if the Director-General of Ordnance wishes it; during the recent pressure, has not referred so much as would otherwise have been the case, 2943-5; it is the practice to refer every building contract, they are of great importance to the Inspector-General of Fortifications, 2946; dispensing with the services of the

Mr. ALFRED MAJOR—continued.

brokers for copper was a great advantage to the public service in the way of economy, 2950-3; the primary cause of the difficulties in the way of supply which have occurred in this war has been that sufficient reserves of many articles for which the trade had been exclusively relied on, have not been maintained, 2798, 2961; his relations with the heads of departments are so close and intimate that he can always get the technical knowledge he requires in making a contract, 2973, 2974; one of the most important functions that the Director of Contracts has to perform is that of securing fair competition, 2975; in placing contracts, always endeavours to work in accordance with the views of the manufacturing departments, as far as possible, 2991-5; would always consider any recommendation he might receive from the Principal Ordnance Officer in regard to the placing of a contract, if he did not agree with the recommendation would refer to the Director-General of Ordnance before sending the case to the Financial Secretary, 2996-3001; 3004-6; it is laid down that on tenders being referred to the requisitioning authority by the Director of Contracts he should state what tender, in his opinion, should be accepted, 3002; details of a case in which a General Officer Commanding applied for the removal of a certain contractor's name from the local list of firms to whom tenders should be sent; the Secretary of State decided that the contractor's name should not be removed, 3012-23.

(b.) Transfer of Contracts to Military Departments.

If a buyer were established in the factories independent of the superintendent, does not see that it would make any difference in regard to the responsibility of latter, 256; if a buyer were established in the factories his procedure would be identically the same as that adopted by the Director of Contracts, 257-61.

4. CLERICAL ESTABLISHMENT.**(a.) Present numbers, status, and division of duties.**

The Contract Branch is understaffed, 39, 231, 249.

It is proposed to strengthen his branch by the addition of a staff of experts in manufacturing, whose duty it will be to see that orders are being satisfactorily executed, 38-43, 338.

If he had a more extended staff could carry out more careful inquiries into the capacities of firms and the progress of orders, 2963; his supervising staff should be increased, 2966-72.

5. DECENTRALISATION.**(b.) Transfer of Contracts to the Military Districts.**

If general stores were bought by the military districts the Director of Contracts would be buying in retail instead of wholesale; it would be an expensive thing to allow Districts to buy general stores; the principal difficulty would be in regard to inspection, 233; does not think that any part of the making of contracts could with advantage to the public service be transferred to the districts, 236, 236; the present system of making contracts at out stations occasionally results in loss, 332; there would be an objection to having the buyer, the seller, and the inspector all together at Woolwich, 334-8.

There is no insuperable difficulty in settling tenders at Woolwich, but, even with the facilities afforded by the telegraph and telephone, tenders can be more conveniently settled at headquarters, 1710.

It is always necessary to treat tenders on principles of fair competition; that never would be done if contracts were more largely delegated to military officers who have no experience, and who are always changing, 2975.

GENERAL SIR H. BRACKENBURY.**1. CONDUCT OF BUSINESS IN THE WAR OFFICE.****(a.) Administrative.**

The decision of what questions should go to the Ordnance Committee rests entirely with him; sometimes over-rides the Committee; the deliberations of the Committee must be slow, because they are based upon difficult and delicate experiments; has no suggestions to make for improvement in its procedure, 5336-56, 5374-88; there should be a Military head, a Military Under Secretary of State, over all the administrative and supply services, whose duty it should be to see that all proposals are considered from all the administrative and supply points of view,

General Sir H. BRACKENBURY—*continued.*

he should be appointed for five years, with powers of extension; in this way the executive and purely administrative functions of the Commander-in-Chief could be separated, and he would be relieved of the detail of supervision, 5416-85.

(b.) *Financial.*

It is very desirable that the Paymaster's Branch and the Accountant-General's Branch should be amalgamated; there is a want of touch between district finance and War Office finance, 5356, 5359; the Departments should be more interchangeable, a Paymaster should come into the Accounts Branch of the War Office, and then go out again into the Districts; the Pay Department should also be open to the Accountant-General's staff, 5362-4, 5372, 5373. It would be an immense advantage if any sums voted for expenditure within the year, but which did not come into the payments because the stores had not been delivered, could be revoted and given for use in the succeeding year, instead of being returned as unexpended balances, 5389-408.

3. CONTRACTS.

(a.) *Existing System.*

The existing system might with distinct advantage be improved, 364; the responsibility of the Director-General of Ordnance to the Secretary of State and the Army is really destroyed by the fact that he has not the power himself to obtain the things he wants, 364; there has been constant friction between his Department and the Department of the Director of Contracts, 364, 477, 478; proper regard is not paid to the element of time and the ability of firms to carry out their contracts at all times, but more especially in times of war, 364, 388; 417-42; does not think that any system under which the Director-General of Ordnance is not responsible for obtaining the supplies which he has to give the Army can be a right system, 364; it is a wrong system that the Director of Contracts should be directly under a parliamentary official upon whom political pressure may be brought to bear, 365; the present system does not lead to economy; the Director of Contracts attaches too much importance to cheapness, 366, 367; to find out the proper sources of supply and to find out causes of delay in the execution of contracts the Director of Contracts should be given travelling inspectors, 367, 368, 457; if he dealt with contractors would be more rigorous with regard to penalties; the penalty clauses are utterly futile; has proposed that there should be cumulative penalty clauses in the contracts, 377, 389, 393-7, 428, 436, 441; the present system of buying in default is a farce, 398; there is scarcely anything that is supplied that is not behind time, 401; the Director of Contracts has no interest in enforcing penalties, 402; has known of complaints of delay between date of requisition and date of placing contract, 416; at present contractors tender recklessly as to dates, because there are no penalty clauses worth speaking of, 431, 435; his Inspection Department inspects stores on delivery; it has nothing to do with inspection of work except in certain cases during manufacture, 444-8, 474; a great many complaints of delays in delivery have been sent from his Department to the Director of Contracts, 455; has frequently called upon the Director of Contracts to apply penalties, 479.

In normal times the present system which regulates the office of the Director of Contracts and his relation to the manufacturing and supply departments does not work satisfactorily, 2544-7; his suggestions with reference to decentralisation would not affect the question of purchase of warlike stores for the Navy, 2600; it is not satisfactory that when the Director-General of Ordnance or his representative the Principal Ordnance Officer says that deliveries have been so bad that he presses for a fine, the Director of Contracts should have in his own hands the power to say, "I shall not inflict that fine"; the power of remission ought to rest solely in the hands of the Financial Secretary, 2603-5; his department is the best department to visit works and see whether firms should be allowed to tender and whether their tenders should be accepted or not, 2606, 2615; the friction that has existed between his department and the department of the Director of Contracts has been mostly in reference to stores and clothing, not in reference to guns and ammunition, 2551-3, 2609-11; if he were given a free hand would constantly be sending out his people to try and find out fresh

General Sir H. BRACKENBURY—*continued.*

sources of supply, 2616-9; it is an extraordinary thing that the General Officer Commanding of a district can make a contract for 2,000*l.* while the head of the Ordnance Branch has not got that power, 2625.

(b.) *Transfer of Contracts to Military Departments.*

At present the staff of the Director-General of Ordnance find out sources of supply that the Director of Contracts has never attempted to find out, 367; the Contract Branch should be broken up, and that portion which deals with contracts for warlike stores should be detached from the Financial Secretary and put under the Director-General of Ordnance, 370, 378, 458-60; under this system there would really be less work for the Director-General of Ordnance than there is now, 380; would only decentralise contracts in small things, 381-6; the head of a department who is responsible for the quantity and quality of the stores has a greater interest in economy than anybody else, 388; thinks, if he controlled his own contracts, he would be able to get the goods more quickly and more punctually as regards the date tendered for, 434, 436; there would be no more danger of collusion with manufacturers than there is at present if the Buying Branch were placed under him as well as the Inspecting Branch, 482-3.

The Director of Contracts is charged with making purchases in concert with heads of divisions; if that is to become a reality, it must be done in concert with those officers to whom the Director-General of Ordnance delegates certain portions of his work, 2502; as an alternative to his previous suggestions and by way of a compromise, proposes that the Director of Contracts should have an Assistant Director at Woolwich who should make contracts there in concert with the Principal Ordnance Officer and the Ordnance Factories, and another Assistant Director at Pimlico who should make contracts there in concert with the Chief Ordnance Officer of the Army Clothing Department while the contracts for weapons of war and ammunition should be made at the War Office in concert with the Director-General of Ordnance, 2502, 2504, 2560-9, 2574-87, 2588-97, 2621, 2622; if this decentralisation were carried out, the Accountant-General should have both at Woolwich and at Pimlico an Officer of F. 12 who should note liabilities and send up a weekly Schedule of contracts made on demands sent forward, 2503; any matters which the Assistant Directors of Contracts could not settle locally should be referred to the Director of Contracts, who would settle them in consultation with the Director-General of Ordnance, 2503, 2507, 2512, 2623; it would be the duty of the Assistant Directors to send to the Director of Contracts weekly Schedules or reports, 2508; the Assistant Directors should have the power to arrange with the local Officers when tenders higher than the lowest should be accepted, 2519; the Director of Contracts should still have a general directing and controlling power, 2521, 2537-40; in time of war and in cases of extreme urgency the local officers should be empowered to arrange together in order to make purchases outside the system of tender, 2522-42; would infinitely prefer that the allocation of contracts did rest with the Director-General of Contracts, 2549, 2573, 2574; if such technical matters as guns and ammunition and works were detached from the Director of Contracts and handed over to the Director-General of Ordnance and Inspector-General of Fortifications, it would be a step in the right direction, 2551-4, 2613; even if the heads of the departments had the right of consultation with the Director of Contracts upon tenders, &c., thinks that decentralisation would be equally necessary, 2557-9, 2621, 2622; a great deal of the success of his suggestions would depend upon the Financial Secretary, because if the Director of Contracts attempted to recentralise it would be represented to the Director-General of Ordnance who would go to the Financial Secretary and, if necessary, to the Secretary of State, 2588; if compromise is not wanted, then the great principle is that the officer who is held responsible for supplying the Army should have all the means of getting that supply in his own hands, 2592, 2620-2; Assistant Directors of Contracts, being in close touch with the officers of the supply departments and acting in concert with them, would more thoroughly realise

GENERAL SIR H. BRACKENBURY—continued.

their difficulties, would more readily assist them, and delays would be avoided and superfluous correspondence done away with, 2593; under his suggestion a contractor would see all the people he wished to see in one place; he would be able to see the representative of the supply department and the representative of the Contract Branch together, and there would be less risk of getting two different answers from two different authorities, 2596, 2597; when the Assistant Director of Contracts has made the purchase, the further responsibility should rest with the supply department, except the actual infliction of penalties which should be in the hands of the Financial Secretary, 2601-3; under his suggested scheme, although it would throw the ultimate responsibility on the Director-General of Ordnance, yet his officer ought to have the final decision as between himself and the representative of the Director of Contracts on any particular transaction, reports on both sides being subsequently submitted to Headquarters, 2626-37.

4. CLERICAL ESTABLISHMENT.**(b.) Substitution of Military for Trained Civilian Staff.**

Would replace all the Second Division Clerks in his Branch by military clerks, as regards the public interest the work could be as well done by one set as the other, but it is not desirable to have them mixed, 5294-7, 5370; has no Higher Division Clerks, does not find that the continuity of his office suffers from that, nor from the fact that officers are being continually changed after five years, 5301-10; owing to their military knowledge military clerks are superior to civilian clerks for the work of his Branch, 5311-6; for his work the military clerks are just as good as the Second Division Clerks, 5320-3; Military business should be managed entirely by military men, but in each spending department there should be a small civilian staff to do the account work, 5325-30, 5355-57; anticipates no difficulty in getting what Military Staff clerks he may require for his Branch, 5367, 5368.

5. DECENTRALISATION.**(b.) Transfer of Contracts to Military Districts.**

Would only decentralise contracts in small things, 381-86.

The making of contracts for stores could not be transferred in any way or to any extent to the districts, 2642.

COLONEL JOHN STEEVENS.**3. CONTRACTS.****(a.) Existing System.**

The present system under which his demands for stores are forwarded to the Director of Contracts causes the efficiency of the service to suffer owing to delays, 495-98, 552-63, 593, 684-87, 708, 727-29, 734-36; there are always long delays even in normal times, they are part of the system, 500, 505-17, 568; the system of penalties is very unsatisfactory, they are very rarely enforced, 542, 701, 809; does not think the Director of Contracts makes himself acquainted with all the available sources of supply, 552; further contracts sometimes at higher prices are frequently given to contractors when they have already unfinished contracts in hand, 552-61, 698; there is substantial and serious delay in the supply of stores under contract, 564, 565; places no reliance whatever on dates which are arranged for in contracts for delivery, 566, 619-24; the Director of Contracts is always informed in normal times when a contractor has not delivered to time, 569-73; has been habitually making complaints to the Director of Contracts of non-delivery of stores, 577-84, 588; a more rigorous application of penalties would secure more prompt deliveries, 625; the Director of Contracts should be responsible for the stores up to the time of delivery and should not disclaim responsibility directly a contract is made, 651, 652; he is limited in regard to purchasing to 25l., 679, 800-806; considers it is a disadvantage that the Contract Branch has no technical knowledge, 688; contracts are given to firms who are unable to carry them out, 693, 694-809; contracts have been given to middlemen, 695; the fact that he is not invariably informed of the steps

Colonel JOHN STEEVENS—continued.

taken by the Director of Contracts on his demands is a source of much difficulty, 696; considers the Director of Contracts does not recognise the necessity of departing from routine, 772-76; the Director of Contracts is responsible for the practice of continuing to give contracts to inefficient firms, 798.

(b.) Transfer of Contracts to Military Departments.

The work of supplying stores would be done more satisfactorily if the purchases were effected directly by the heads of departments, 514, 524, 793; his expert knowledge would particularly qualify him to become the purchaser of certain articles if the Contract Branch were broken up or decentralised, 549, 550; stores would be got more quickly if the purchasing were done by the Ordnance Department, 592, 593-609, 658; the Director-General of Ordnance should have a general power to buy with a discretion to buy with or without tenders, 593-98; would be satisfied if the Contract Department, so far as it deals with providing general stores, were placed under the Director-General of Ordnance, that would promote promptitude in delivery, efficiency in carrying out the execution of the contracts, and at the same time provide the necessary safeguards as to the proper expenditure of money, 654-76, 762-71; junior officers of the Ordnance Department should have an opportunity in time of peace of gaining a knowledge of purchasing in order that they may know thoroughly the system they are called upon to carry out in time of war, 681, 682; could carry out his portion of the contract work with a moderate addition to his staff, 658, 659, 712; advantages would result from his being brought more into direct communication with the contractors, 739; the officers of his Department have a technical knowledge of the use of stores which is not possessed by the Contract Branch, 741-61; if the whole of the contract work were transferred to the Director-General of Ordnance it would be necessary to have a Reviewing Branch under him in Pall Mall, 769.

COLONEL F. E. MULOAHY.**3. CONTRACTS.****(a.) Existing System.**

Has had no glaring instances of delays in getting tenders out; is of opinion that his requisitions are dealt with in the Contract Branch with reasonable punctuality, 820-3; thinks both the Inspecting Officer and himself should be consulted in the allocation of orders, 824-35, 908, 915, 942; does not consider that the Director of Contracts attributes sufficient importance to time in the allocation of contracts; he places orders with firms who are already over-loaded, 832, 914; the great drawback to the present system is that contractors are never up to time, or within reasonable distance of time, 841, 854-60, 891; would enforce penalties more rigorously, 843-847; Director of Contracts objects to his asking contractors their difficulties while contracts are being carried out; stigmatises such action as unnecessary and irregular, 861, 870, 895; travelling inspectors should be appointed under the Director of Contracts; they would be a connecting link which is badly wanted, at present the supply officer is cut off from the contractor, 873-86; the Contract Branch is not sufficiently in touch with the manufacturers, 887, 931; thinks the Director of Contracts is aware, when placing contracts whether a firm is in arrear or not, 914; renders to the Director of Contracts periodically a statement of the whole condition of the contracts, 917-9.

(b.) Transfer of Contracts to Military Departments.

Assuming that stores will still have to be obtained by contract, does not think the work could be done more quickly by allowing him to make purchases under the Director-General of Ordnance, 837-40, 903-7; if he dealt with contractors themselves he could make them more punctual, 842, 869, 908; thinks he should have the power of sending officials under the Director-General of Ordnance to any place at any time to see how orders are proceeding, 893, 894, 933, 936; would prefer a system under which he became the purchaser of all the stores he required, 901, 902; it would be a very great advantage to the State if his department undertook the duty of purchasing, 932, 937.

COLONEL C. M. WATSON.

1.—CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

Details of the principles upon which loan works are to be carried out, 6172-93; local inspections are carried out as far as possible, 6194-5; in order to obviate delays in regard to the printing required by his branch, would suggest that the head of each department should have the right to deal direct with the printers in all cases, 6208-19, 6489, 6492-4; the unsatisfactory manner in which the Registry carries out its work is a cause of delay; would place at the head of the branch a skilled official, and a better class of clerks should replace the untrained boys who are at present employed there, 6221-43; would like to have the Registry at the Horse Guards put under the Inspector-General of Fortifications, 6243, 6414-6, 6541-5; there is practically no delay arising out of correspondence which is necessarily carried on between the Quartermaster-General and the Inspector-General of Fortifications; but it would be an advantage if the functions of each were more clearly defined, 6245-310, 6508-21, 6538-40; there is a saving of time in the Inspector-General of Fortifications starting barrack questions rather than wait till the Quartermaster-General has put forward a definite statement of accommodation required, 6435-46, 6547-52.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

In order to obviate the present delays in matters of finance the Inspector-General of Fortifications should be made responsible for his own votes, financial control taking the form of post audit, 6196-208, 6477-92; has no difficulty in ascertaining daily how the expenditure of loans stands, 6358-66; the surveyors in his branch check all bills professionally to see that the description of each item is correct; would prefer to treat the home bills in the same way as the foreign bills are treated, and leave the professional check entirely to the stations; would have inspections and an occasional test audit, 6367-408; if the Accountant-General took over the examination of the works bills he would have to duplicate the staff of the Inspector-General of Fortifications, 6447-9; has had no complaints of their works under the Barrack Loans; independent authorities have reported on their work most favourably; details of accommodation provided under the various loans, 6452-8.

3. CONTRACTS.

(a.) *Existing System.*

The General Officer commanding a district has power at present to sanction locally contracts up to 50*l.* for stores, and up to 2,000*l.* for building works, in cases where the contracts are for more than 2,000*l.* the tenders are sent to the Director of Army Contracts, who, for want of technical knowledge, has to refer them to the Inspector-General of Fortifications, 944-76; abroad the General deals with all contracts, without the intervention of the Director of Contracts, who, however, has the power of reviewing them afterwards, 951, 1207; in cases of local supply, works and materials are carefully inspected by the Royal Engineers, and, if not up to specification, rejected, 951; at the end of every contract a completion report is rendered, stating how a contractor has done his work, and is passed to the Director of Contracts, 977-80, 1201; the due execution of the works contract must rest with the Commanding Royal Engineer of the district, 982-4, 989, 1137, 1149; does not think there is any delay in the Contract Branch in dealing with tenders, 1000, 1001, 1199; it is recognised as the duty of the staff of the districts that they shall control works in progress, and inspect them when completed, 1002, 1005; penalties are not often enforced, each case is considered on its own merits, 1006-13; there are a certain number of complaints about delays in the completion of works, 1014, 1256; some contractors are reckless and some very careful in regard to time, but a time for completion of work is always specified, 1015-7; the limit of 50*l.* for stores is too low, would make it 2,000*l.*, the same as for building works, 1033-44, 1167; all contracts made locally are sent to the Inspector-General of Fortifications for review, with reasons stated when lowest tenders are not accepted, 1039, 1102, 1207; all orders from abroad for stores come to his office, where a record

Colonel C. M. WATSON—continued.

of the latest patterns, &c., is kept, this results in the best being procured, 1048-56; it is part of the duty of the central office to inspect stores in the process of manufacture, 1057, 1058; penalties in the case of stores are always settled in communication with the Director of Contracts, 1059; it would be a rare thing for the Director of Contracts to reject a contract selected by the Inspector-General of Fortifications, 1093, 1094; every district has an annually revised list of contractors, and on placing his contracts a General has to send tenders to all on that list, 1096-1100, 1107, 1108; prefers to have all work done by contract, but abroad military labour has to be employed; thinks in a large contract a contractor does the work better and more cheaply, 1111, 1112, no responsibility rests upon the Director of Contracts, either for execution of work or for finance, 1149, 1150, 1153, 1201-4; the experiment of allowing contracts up to 2,000*l.* to be made in the districts has not been thoroughly tried, as none of those contracts have yet been finished, 1200; the Inspector-General of Fortifications can make contracts for stores for only 50*l.*, except in the case of iron stores, when his authority extends to 100*l.*, 951, 1210; the finding of arbitrators, when they are required, is supposed to rest with the Inspector-General of Fortifications, 1213; the present intervention of the Director of Contracts does away, partially, with the individual responsibility of the Inspector-General of Fortifications, 1217-29; the Director of Contracts' functions are, to a certain extent, only those of a post office, 1235, 1236, 1257, 1258.

(b.) *Transfer of Contracts to Military Departments.*

All that is done by the Director of Contracts now is to accept the tenders referring to matters under the Inspector-General of Fortifications and carry on correspondence with the contractors, it would make little difference in the Inspector-General of Fortifications' Branch, possibly only the addition of one clerk, if all the work were transferred from the Director of Contracts, 1061-74, 1113, 1114; if the office of the Director of Contracts ceased to exist his Branch would secure contracts as advantageous for the Service as at present, 1080; his Branch and the General Officer Commanding a District have more interest in economy than the Director of Contracts, 1080-2, 1237; even if all the contract work were transferred to his Branch, thinks important contracts should go to the Secretary of State, 1176; thinks the responsibility of the Inspector-General of Fortifications really remains the same whatever the functions of the Director of Contracts may be, 1251.

5. DECENTRALISATION.

(b.) *Transfer of Contracts to Military Districts.*

It would be much simpler if all contracts for building works were sent to the General Officer Commanding, 948, 949; it would save a great deal of time if a rule was made that all letters from contractors were to go direct to the Commanding Royal Engineer, 1141-7, 1211; would propose that up to 2,000*l.* the General should have power to accept tenders, and all tenders above that amount should be scheduled locally to the Inspector-General of Fortifications, the larger contracts would thus be under two independent authorities as the General is under the Secretary of State and not under Inspector-General of Fortifications, 1179-93.

(c.) *Delegation of Control to Military Districts.*

Would leave as much power as possible in the hands of general officers, but would not delegate to them powers to decide upon the plans, &c. of barracks; this work can be better done from headquarters, 6166-72, 6193; the power of deciding on the merits of all sites and buildings should rest with headquarters, general officers are not best fitted to be vested with uncontrolled power of committing the War Department in regard to permanent barrack-building schemes, 6314-58, 6496-507, 6528-37; the Commanding Royal Engineer ought to be on the staff of the General Officer Commanding; so far as works are concerned the Commanding Royal Engineer should not be under the Chief Staff Officer, 6459-76, 6522-6; in regard to the acquisition of rifle ranges the system of employing local land agents might be extended with advantage, 6553-70.

COLONEL G. HILDEBRAND.

3. CONTRACTS.

(a.) Existing System.

For fortification works General Officers of Districts can put out contracts up to 2,000*l.* without the intervention of the Director of Contracts, as, however, fortification works are invariably above 2,000*l.*, all contracts go to the Director of Contracts for approval, 1269, 1270; cases have occurred in which his Branch has been overridden in the allocation of contracts by the Director of Contracts, 1274-80, 1306-11; is dissatisfied with the present system under which contracts are sometimes placed, by the Director of Contracts, with men against whom both his Branch and the Generals have strong objections, 1281, 1282, 1290, 1291, 1294-1305, 1324-49; is of opinion that the intervention of the Director of Contracts as at present is entirely for the bad, 1284, 1365; the present system does not tend to economy, does not tend to efficiency of work does not tend to speed of execution, and might in certain cases be dangerous to the safety of the Empire, 1293, 1364; his Branch has been overridden by the Director of Contracts a dozen times in the case of one particular firm in the last two years, and that firm are still contractors for fortification works, 1309; the Director of Contracts allows tenders to be invited from bad contractors, and when they come in he accepts them, 1341, 1342; thinks interviews between the Director of Contracts and contractors most undesirable, 1370; the distance between the Office of the Inspector-General of Fortifications and that of the Director of Contracts leads to delays, 1378, 1379.

(b.) Transfer of Contracts to Military Departments.

The whole of the superfluous correspondence arising with the Contract Branch could be done away with if the contract arrangements were kept in the branch which has to carry out the work, 1285-7; it is absolutely essential in the public interest that the final decision in accepting tenders for important work should rest with those who have to carry out the work, 1360; good work has been done abroad, in Malta, Gibraltar, and other places where the Director of Contracts has nothing to do with the contractors, 1364.

LIEUTENANT-GENERAL SIR C. M. CLARKE, BART.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) Administrative.

Except for very small matters, questions of sites should be settled at headquarters, and not be left to Generals in the districts, 6770-6; one department might be entirely charged with the acquisition of rifle ranges, 6777-86, 6860-2; it would be a very useful thing if the Army Board met regularly and at stated intervals, 6795-816; the Army Service Corps officers could not be charged with the maintenance of barracks, at present they have plenty to do, 6817; the Army Service Corps officer at present is not sufficiently educated to be able to give a General advice in regard to general contracts and purchases, renting, and leasing of land, 6820; so long as the members of the Pay Department are commissioned officers they should be under a military head, the Quartermaster-General 6827-9; it would tend to lessen delays if the Inspector-General of Fortifications were in the same building as the Adjutant-General and Quartermaster-General, 6846-50; it would not be an advantage to bring the Supply and Works Departments under one head, 6851.

(b.) Financial.

The departments should be as little as possible interfered with in the administration of expenditure under their Votes, 6845.

3. CONTRACTS.

(a.) Existing System.

The contracts for all local supplies are in the hands of General Officers commanding districts, with the exception of coal contracts, which are centralised under the Director of Contracts, 1393-5; contracts made by Generals locally are subject to general supervision by the Director of Contracts, 1396-02, 1417-9; a General is only limited in the amount of his contracts for supplies by the number of troops he

Lieutenant-General Sir C. M. CLARKE, Bart.—continued.

has in his district, 1403, 1494; local tenders are invited by public advertisement, 1405-12; it is left entirely to the General to accept whatever tender seems best to him, subject to considerations of the character of the men tendering and the general principle that the lowest tender under ordinary circumstances should be accepted, 1413-6; his department has no complaint to make of the work now done by the Director of Contracts as being an unnecessary cause of delay, 1426, 1435, 1436; except in the case of operations outside the country, the Quartermaster-General makes practically no contracts for supplies, 1431; details of procedure by which the head of the Supply Branch at Woolwich made demands on the Director of Contracts for supplies for South Africa, 1433-51, 1464; stores purchased locally by Generals are inspected by Army Service Corps Officers, 1460; finds the Director of Contracts the most convenient buyer for the supplies he requires, 1464-77; considers the subsequent review of contracts after being entered into suffices amply to safeguard the public interests and ensure that contracts are entered into in the ordinary and regular way, 1481, 1525; has no complaints, owing to the effective inspection by his own officers, and the Director of Contracts' knowledge of the markets, 1440, 1441, 1489-90.

(b.) Transfer of Contracts to Military Departments.

If the present system were altered it would be necessary to supply the Quartermaster-General, the Inspector-General of Fortifications, and the Director-General of Ordnance with a separate contract staff, 1427-9, 1478, 1527; sees no advantage in making purchases direct; does not consider himself qualified; would have to depend on his contract staff, 1443, 1528; his Supply Branch at Woolwich would be quite competent to make its own contracts for supplies with the aid of a little clerical assistance, 1486.

4. CLERICAL ESTABLISHMENT.

(b.) Substitution of Military for trained Civilian Staff.

In branches where continuity and secrecy are necessary, is in favour of the employment of the civil rather than the military clerk; would not mix the classes, 6830-7, 6840-4, 6855-9; would not be in favour of making the military clerk interchangeable between the War Office and the districts, 6838, 6839.

5. DECENTRALISATION.

(b.) Transfer of Contracts to Military Districts.

Would not give the General of a district *carte blanche*, but would give him as much financial power as possible; this it is a good thing as it develops habits of business, 1494-6, 1516, 1523; meat and forage contracts are arranged in the districts without reference to the Director of Contracts, except when completed, and with good results, 1497-1505, 1519.

MR. G. D. FLEETWOOD WILSON.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) Administrative.

As at present worked, the registry is a source of absolute danger to the department as well as a grave inconvenience, 4782; the registry was formerly under him, but the responsibility for it has now, at his request, been taken over by the Permanent Under Secretary of State, 4782, 4860; ever since the higher division clerks were withdrawn from the registry it has been going from bad to worse, 4783; if every great department had its own registry, there would be confusion and delay; at present, there is no undue delay in dealing with papers, the machinery is sound if it is properly worked with a proper staff, 4815-24, 4919, 4920; the responsibility for the efficiency of the civil clerical staff of the War Office rests with the Permanent Under Secretary of State, 4846-60; is not satisfied with the present working of the office, 4854; if the Branch of the Director of Contracts is broken up, the parliamentary work connected with that Branch should be transferred to the Central Branch, 4754-8; the state of the Registry at the War Office is a scandal; the Department suffers very much owing to delays in getting papers; the Registry should be established on a proper footing under a Chief Clerk and Registrar, who should be given full control over papers and the manner in which the various subjects were dealt with, 4760-3; the head of the Registry should have

Mr. G. D. FLEETWOOD WILSON—continued.

a controlling and guiding influence over the actual papers, and over the work on them throughout the Department, 4773-4830; it is a very unfair temptation to put very important papers in the hands of men with small salaries; the custody of confidential documents should be in the hands of a higher division clerk, 4781; the Chief Clerk and Registrar should be the immediate head of all the central branches, and one of his most important functions would be to supervise and improve the correspondence emanating from the War Office, 4785-7, 4795, 4873; the Central Branches should be placed entirely under the control of Assistant Under Secretary of State; this would relieve the Permanent Under Secretary of an enormous amount of work with which he is at present burdened, 4788, 4837; it would be impossible for the Assistant Under Secretary of State to act as Chief Clerk and Registrar with any success, 4792-4; the drafts of all important letters that go to the Assistant Under Secretary, the Permanent Under Secretary, or the Secretary of State for signature should, in the first place, be submitted to the Chief Clerk and Registrar for approval and amendment if necessary, 4796-814; the Department under the Chief Clerk should draft letters which do not deal with the technical and particular work of the departments from which they emanate, 4798; would get rid of clerks in their first year's service who did not promise to develop into efficient public servants, 4839, 4928-35; it would be a very good thing to relieve the Inspector-General of Fortifications of the bulk of his purely civilian building work, and place it under the Office of Works, 4905-18; it would be a very great advantage to have a Central Branch where young men, on joining the Office, could be educated in a good tone of clerical work, and of dealing with papers, 4924-7.

3. CONTRACTS.**(a.) Existing System.**

Details of the procedure by which contracts for clothing were arranged when he was at Pimlico, 1550-8, 1580-2, 1614; thinks the system of "nursing" firms to enlarge areas of supply presents considerable risk, though it may be necessary to prevent "rings," 1557, 1612; when the tenders were accepted every assistance was given at Pimlico to the contractors; they were constantly there, and were encouraged to come, 1559; constantly represented that travelling inspectors should be appointed to watch and report upon the progress of contracts, 1561-5; used to send very strong protests if contractors were not keeping up to time, 1566; there is a tendency with contractors to take contracts beyond their powers, 1568-70, 1580, 1633-9; in a purely contracts department there is a tendency to think of nothing but contracts, to administer nothing but the contractors' part of the business, and to take the contractors' view rather than the view of the man who has to supply the Army with the material, 1571-4; his complaints of contractors being in arrear with their deliveries were incessant, 1575; all clothing contracts are time contracts, 1576-9; has always held that the infliction of fines should be carried out more rigidly, 1584, 1609; some things cannot be bought in default; many things are not trade articles, 1589; being asked to relax his standard of inspection in favour of contractors was a very common source of difficulty, 1640, 1641; does not accept the view that there is no delay between sending in a requisition and placing a contract; the delay arises from the fact that the technical knowledge which is requisite for a satisfactory selection of firms is to be found rather in the supply and manufacturing departments than in the Contracts Department, 1675-9.

(b.) Transfer of Contracts to Military Departments.

If, when at Pimlico, he could have placed his own contracts it would often have saved a great deal of time, and in many cases there would have been no delay in delivery, 1556, 1628-32; it would be better to break up the Director of Contracts Department, and let the Director-General of Ordnance and the various Branches make their own contracts, 1590-3, 1680; the duties of the Director of Contracts should be distributed, labour questions should be under the Parliamentary officials and be dealt with in the Civil Branches immediately under the Secretary of State; the registration of contracts should be a function of the Accountant-General, who should also have the

Mr. G. D. FLEETWOOD WILSON—continued.

power of criticising them by way of audit, this would supply a grave deficiency in the present scheme, 1594-603, 1615, 1654-6; thinks the head of a Supply Department is so much interested in getting good stuff and getting it punctually, that he will always do his best to carry his contractors with him, 1613; the chances of collusion would not be greater than at present if the Contracts Branch were abolished; the chances of collusion between inspectors and viewers and contractors are not in any way affected by the Director of Contracts, 1622, 1660-5; when at Pimlico, would gladly have taken over his own contract work with a small addition to the staff, 1625, 1651; if the Supply Departments had the placing of their own contracts, there would be greater security that the stores would be available for the troops when wanted, 1632; there is now a re-duplication of work, but if the Contracts Branch were broken up, and the heads of departments allowed to arrange their own contracts, that reduplication would cease, 1653, 1670-4; the functions of the Director of Contracts afford no protection against the passing of bad stuff, the responsibility lies mainly in the inspection, 1659-65; the only way in which military stores can be got satisfactorily is to have as little delay as possible between the man who is answerable for the provision of those stores and the contractor who has to make them; thinks any other system under which there is yet another officer with the opportunity of discussion arising between them is a source of delay, and consequently of danger, 1680-8.

4. CLERICAL ESTABLISHMENT.**(a.) Present Numbers, Status, and division of Duties.**

The clerical work of the War Office would be better done by fewer people, provided the general average standard was raised, 4866.

(b.) Substitution of Military for Trained Civilian Staff.

The constitution of the Military Branches should be entirely military with no civil staff at all; reliable, intelligent, and well-trained military clerks are very much wanted, 4875-86, 4891, 4892, 4936-40; a mixed staff, Civil and Military, is a wrong system from every point of view; it works badly, 4887-9; it would be an essential condition to replacing civilian clerks by Army Officers that a limit should be put to the extent to which such Officers should be taken away to take part in active operations, 4895-8; the work of the Director-General of Ordnance's Branch has gone very much better since the civil was replaced by the military element, 4900, 4901.

MR. W. C. B. HALL.**3. CONTRACTS.****(a.) Existing System.**

The Director of Navy Contracts is responsible for the purchase of all stores, supplies, and machinery of authorised patterns as articles of store, required for the use of the Naval and Marine Forces and Establishments and for the conclusion of all contracts in connexion therewith, excluding only contracts for ships and their machinery, for guns and gun mountings, and for yard machinery, 1775-7, 1883-93, 1953; in order to ensure the supply of articles of a satisfactory quality, care is taken to obtain them only from persons or firms of repute, and for this purpose the system of limited tenders is encouraged in preference to general invitations by advertisement, 1778; the limited lists are continually being revised; a man is generally taken off if he fails badly to carry out his contract or if he does not tender for three years, 1782-90; the element of time always enters into the consideration of contracts, 1781; it is only in reference to very technical matters, as regards machinery and special articles that the Director of Contracts confers with the head of the department concerned as to the firms to be invited to tender, but if the head of a department has expressed a wish to be consulted, he is consulted whatever the article may be, 1791-9; the Director of Navy Contracts has no responsibility for the examination of stores, but he is furnished by the examining officers with such information and reports upon the quality of materials as he may from time to time desire, 1800; has no means during the execution of an order of sending down and watching its progress; would inquire of the department concerned if necessary, 1800-2; it might happen in an

Mr. W. C. B. HALL—continued.

exceptional case that the officer who examined the work in process of construction would find himself detailed to examine the goods when delivered, 1802-7; it is a very important part of the duty of the Director of Navy Contracts to keep himself well informed in regard to new inventions and improvements and changes in the designs or qualities of the stores required, 1808, 1878; visiting of works is an important part of the Director's duty; the chief requisite to enable him to carry out his duties satisfactorily is not so much technical knowledge as gumption, 1809-12, 1832-5, 1860, 1861, 1899-1915; sometimes, especially when trade is good, there are many complaints of delays in delivery, they have met that by striking contractors off the list for continuous delay, 1815, 1816; their chief remedy for delay is buying in default, 1817-9; the great bulk of the stores are bought under annual requisitions, and the delivery spread over eight or nine months, 1820, 1821; the principal part of the duty of keeping contractors up to time is done in the receiving departments, in cases of failure the papers are passed to headquarters and then the Director of Navy Contracts takes up the question of hastening delivery, 1822, 1823, 1841-50, 1916-23; the Director of Contracts can set aside the ordinary routine in cases of urgency, 1824, 1825; the Director of Contracts consults the head of the department concerned before renewing an important contract, 1836, 1837; in regard to certain special kinds of stores the Supply Department keeps a watch over the contractor's proceedings and reports periodically to the Contract Department, 1833; after the Director has made a contract, the head of a department is responsible for seeing it carried out, 1866, 1897, 1898, 1899; does not find that the efficiency of the Contract Branch is affected by the fact that the members of it have not had any technical training, 1859, 1863-71, 1899-915, 1936-9; the using departments supply the specifications and patterns and the Contract Branch buys to them; the departments are responsible for the patterns, 1872, 1896; the Contract Branch is not in the habit of overriding the strongly expressed wishes of departments, 1873, 1876, 1877; the Contracts Branch raises no objection to expert officers from the departments visiting the works of contractors to see how contracts are progressing, 1874; personal communication between the contracts and the other departments is enjoined by the instructions, and it is a practice that is generally followed, 1894, 1895; the instructions for the Director of Navy Contracts are revised from time to time as experience shows it to be desirable, 1924, 1925; each branch clearly knows its duty from those instructions, and there is no danger of friction, 1927; finds the regulations in practice easy and satisfactory to work under, is quite satisfied with them, 1945, 1946.

(b.) Transfer of Contracts to Departments.

Does not consider that any system which gave full permission to heads of departments to make their own contracts would be as satisfactory as the present one, 1828-30; if in time of emergency everybody took to buying on their own account there would soon be chaos, 1879, 1880.

MR. W. P. PERRY.**3. CONTRACTS.****(a.) Existing System.**

There is nothing in the War Office corresponding to the "Instructions to the Director of Navy Contracts" printed at the Admiralty, 1962; such a set of "Instructions" would be of considerable assistance to the department, which at present has only the instructions handed down by various committees, 1962-9; the difficulties between his department and others are partly due to a lack of definiteness in instructions; if his instructions could be more clearly defined in detail it would prevent a certain amount of objection that exists to the spirit of the instructions being put into use every day, 1966-8, 2038; local officers will sometimes, and without authority, commit the Department to a purchase for which subsequent authority has to be given, 1970-84, 2038-43, 2055-61; always confers with the head of the department concerned, the requisitioning department, as to which tender shall be accepted unless by consent the reference is dispensed with, 1985-96; visiting establishments in the manufacturing districts is a recognised

Mr. W. P. PERRY—continued.

system in the Contracts Branch, but owing to lack of staff it has not been carried out efficiently lately, 1997, 2004-8, 2044-5, 2046; the system pursued at the War Office differs from that followed at the Admiralty where they can usually systematise their orders so as to go to the trade about once a year for one particular article, whereas, owing to the scattered stations of the Army, &c., and the arrangements at the Ordnance Factories, miscellaneous orders are continually coming in, 2001-17; it would be a distinct advantage if the Contracts Branch could get the orders to purchase at definite dates, and for the largest possible quantities, this has been repeatedly represented to the Military Departments, 2017-28; the Contracts Branch is not a "post office," it is the duty of that Branch to call for tenders for stores requisitioned by the using departments, but it is also bound to look into all questions, to see that the contract is correct, the price correct, to keep the record, to watch the transactions right through and, when necessary, to suggest to the departments the advisability of introducing further competition with a view to efficiency and economy, 2031-40, 2062, 2063; there is no friction between the Contracts Branch and the other Departments, though there may be friction between individuals, 2026, 2027; there is no more difficulty in meeting the orders for the Director General of Ordnance, or Inspector-General of Fortifications or Ordnance Factories, than there is in meeting orders for the Quartermaster General, from the contract point of view they are absolutely on level terms; the inspection, the technicalities are in the hands of the military authorities, 2030, 2031; the Director of Navy Contracts does not deal with the variety of stores, with the different classes of stores that the Director of Army Contracts does, 2033-6; his Branch is always glad of the assistance of officers of other departments in the inspection of firms and contracts in progress, but they should not go out except at the instance of the Contracts Branch, 2044, 2045.

4. CLERICAL ESTABLISHMENT.**(a.) Present Numbers, Status, and Division of Duties.**

The Contracts Branch has never been properly staffed during the 18 years he has been in it, 1998.

LORD HALIBURTON.**3. CONTRACTS.****(a.) Existing System.**

While Director of Supplies and Transport never had occasion to be dissatisfied with the department of the Director of Contracts, 2069; always dealt directly with the contractor the moment the contract was made, but if things were not delivered properly then called for the intervention of the Director of Contracts, 2069; his local officers, when necessary, inspected and reported on contracts in progress, the same officers might also be charged with the duty of inspecting supplies on delivery, 2072-7, 2127, 2197-200; thinks, with regard to the proposed travelling inspectors, that the Director of Contracts cannot be an expert in the supply of all stores to the Army, would therefore draw the inspector from the department which is being served by the stores in question, 2078-80, 2124; the tendency of every sub-department is to desire to get the whole business into its own hands, it is a desirable thing therefore that the officer dealing with the stores should not be the sole person to decide where they should be got; if the Contracts Branch works properly they must know a great deal more about the general trade of the country than any particular department can know, 2086, 2091, 2130-5, 2170, 2182, 2187; is under the impression that there are regulations which provide for close contact between the supply departments and the Director of Contracts, and that in making contracts he should do it in communication with the head of the department; in cases of difference of opinion there is always the appeal to the Secretary of State, 2087-92, 2117, 2120, 2147-52, 2156-8; found the office of the Director of Contracts a very valuable assistance, 2093-5, 2130, 2177; visiting the establishments of contractors was a recognised part of the duty of the Director of Contracts, and it is important, from a business point of view, that there should be a sufficient staff to carry out such inspections, 2096-105, 2125, 2126; the Director of Contracts has an incentive to economy as well as the heads of departments, 2106-10, 2131, 2132, 2202-5; never had

LORD HALIBURTON—*continued.*

any friction with the Director of Contracts, contested cases were settled by conference, 2111-5, 2142-6; it is quite right that the Director of Contracts should look upon himself as having charge of the interests of the contractor as well as of the public, 2111-5; 2136, 2137, 2178; if contractors felt that the system of fines was overdone they would put up their prices, 2116; commends the system of placing the duty of seeing a contract carried out on the receiving department as soon as the contract is made, 2123; the direct head of the Director of Contracts is the Financial Secretary and he and the Permanent Under Secretary would settle all ordinary questions raised between the Director of Contracts in reference to the action of other departments, 2172-6; thinks that greater publicity in regard to the prices of accepted tenders would assist the Government by bringing in other contractors, 2206-12.

(b.) *Transfer of Contracts to Military Departments.*

The great evil of not having a Contracts Branch would be that there would be a number of people on behalf of the Government going into the market buying the same sort of article and competing with each other, 2158, 2187.

SIR R. H. KNOX.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

One of the chief duties of the Assistant Under Secretary should, in his position as Chief Clerk, be the superintendence of the work of the Registry, that, and the allotment of the accommodation of the Office and looking after the Office Staff generally, are his proper functions, 5043-7, 5071; all letters passing through the Registry reach the hands of the person responsible for dealing with the subject in the course of an hour or so, 5063-5; in normal times there would be no advantage in introducing a Chief Clerk between the Assistant Under Secretary and the Staff Clerk who is at the head of the Registry, 5072; the function of the Registry is only to receive letters, register them, annex any previous correspondence on the same subject, send the complete file to the Branch that will deal with the matter, as soon as possible, and when a paper is dealt with look through it to note important decisions in an index, and then put the paper away, 5076, 5078, 5079; if there are delays in getting answers from the War Office, would not attribute them to any fault of the Registry, 5080-7; supervision of the drafting of letters would be quite outside the functions of the head of the Registry, the head of the Branch concerned is responsible for the drafting of letters, and the system could not be worked in any other way, 5089-94; the head of the Branch who receives the papers is responsible for sending them on with the utmost rapidity, 5110; it is not the function of the Registry, as at present constituted, to prevent more than one paper running on the same subject at the same time, 5111-30; confidential papers are at present in the hands of the head of the Registry and his assistant, there is nothing to be urged against this system which places the custody of such important documents in the hands of officials who are not of really high standing, 5131-5; the Army Board has rather departed from its original intention, viz., that it should be a committee of the authorities of the several Departments to settle at once for submission to the Secretary of State questions in which they were jointly concerned; it would be of the greatest possible advantage if it reverted to that plan, and met at stated intervals, 5225-73, 5284-6; is in favour of the constitution of a Board consisting of the Deputy Inspector-General of Fortifications, the Deputy Accountant-General, the Deputy Director of Ordnance, &c., to discuss matters which cannot, in the ordinary course of business, be settled by the principals; there is enough of such work to engage officers of that standing quite once a week, 5274-83.

2. FINANCIAL CONTROL AND AUDIT.

(a.) *External Financial Control.*

The system of examination now carried out is absolutely necessary in the public interest, it works better than any previous system, and is extremely satisfactory, 4126, 4127, 4206.

Sir R. H. KNOX—*continued.*(b.) *Internal Financial Control.*

There is an advantage in placing Paymasters under the Quartermaster-General rather than under the Accountant-General; Paymasters are soldiers and should be treated as soldiers, 4088, 4101-4, 4191; the old system of regimental Paymasters was a bad one, 4105, 4208; the examination of one-eighth of the company and one-sixth of the district accounts is sufficient and satisfactory, 4111-3, 4173, 4207; the present system under which the Paymaster acts as cashier and auditor works very satisfactorily, 4111-3, 4128-30, 4199, 4200; and it is strengthened very much by coming as quickly as possible after the financial transactions are completed, 4079; Paymaster's audit should not be accepted as final under any circumstances; it should be subject to test, 4164-6; would not accept from the Paymaster, in lieu of the duplicate pay list, a certificate to the effect that he had examined the company accounts, and that they were correct according to regulation; the duplicate accounts must be rendered to the War Office; there could be no real test audit if it were known which particular accounts were to be taken in hand, 4213-27; the payment of officers through the agents is a system which the officers prize very much; to pay them by cheques issued from the War Office to the agents or through the company accounts would entail additional work without any corresponding advantage, 4228-36.

3. CONTRACTS.

(a.) *Existing System.*

It is not his duty, but the Director of Contracts would satisfy himself, when demands of an extraordinary nature were put forward, that money had been provided to meet them, 2232-42, 2247, 2376-8; the position of the Director of Contracts is one which does secure both efficiency and economy, 2243, 2244, 2361-73, 2398-404; in considering the advisability of placing new names upon his list, it is of importance that the Director of Contracts should have the power of inspecting the various factories and ascertaining the ability of contractors to execute contracts, 2260; the Contract Branch is not a superfluity, differs entirely from the view that each department knows more about the goods it requires and uses than the Contract Branch, 2262, 2263; advocates making all large purchases by means of the Contract Branch, but in extraordinary circumstances the system should admit of the departments making direct purchases, 2264, 2337-9, 2373, 2420; whenever friction exists between the Contracts Branch and the other departments, it is generally merely a personal matter, 2265, 2266; the present Contract system, which gives the power of scrutiny and observance to a department outside the using department, is a valuable one; the Service, if worked on any other lines, would be soon in a very bad condition, 2266, 2267; has always understood that the Director of Contracts, before accepting, certainly contracts of any dimensions, would consult necessarily the demanding departments, and come to an agreement with them, 2265-73, 2284, 2425-7; in the absence of agreement between himself and any department, the Director of Contracts submits the case to the Financial Secretary, who passes it on, if necessary, to the Secretary of State, 2268-71; the duty of inspection should be a joint one, performed by a member of the using department and a member of the Contracts Branch, it should not be left to either the one or the other solely, but both branches ought to satisfy themselves as to the progress made, and ought to be authorised so to satisfy themselves, 2274-82, 2321, 2322; it is inherent in all official people to try and get hold of the work that other people are doing; if, therefore, a set of instructions, similar to those at the Admiralty, could be drawn up, it would be valuable, 2283, 2430; the Director of Contracts, as a matter of principle, requires just as much check as any other department, 2286; would permit the Supply Departments to communicate with contractors and inspect progress at any time they please, but the Director of Contracts should be made aware that such action is to take place, 2322, 2331-3; the War Office contract system has worked admirably for 45 years, and any large variation from it would be very unwise, 2335; believes the delays which have occurred have been due to the difficulties of contractors in meeting their engagements, and not in the slightest degree to faults of the

Sir R. H. KNOX—*continued*.

system which exists, 2336; if the head of a department does not agree with the Director of Contracts he can send the case to the Financial Secretary; if they do not like the ruling of the Financial Secretary they have the right to appeal to the Secretary of State; there is no difficulty in getting prompt decisions, 2342-60, 2394-97, 2408-11; the demanding department is absolutely responsible for testing the goods when they are delivered, to see whether they are what they want, and in accordance with the specification, 2361-2; whatever loss of time there may be in delivering, or in the execution of work, does not arise from the contract system itself, 2366, 2419; the demanding departments should be the watchers of the Director of Contracts, to see that he is doing the best for them that he can do; if his system is not producing the best results economically they should report, 2382, 2383; any using department which suffers from delays, or rejections, should communicate with the Director of Contracts, and look to him to set the matter right, 2386; in normal times the Contracts Branch and the Director-General of Ordnance and Quartermaster-General can produce the men necessary to do all in the way of inspection that is required, 2389-91; would not agree to the audit of bills being carried out in the Contracts Branch, 2393; the question of fines is abstruse, difficult, and puzzling; believes that during the recent period of strain most of the contractors have done their best to supply everything that has been wanted by the State, 2428.

(b.) *Transfer of Contracts to Military Departments.*

The War Office is the largest buyer in the world, and it is necessary that it should have a contract policy, but no uniformity of policy could be secured by any arrangement under which contracts are dealt with and decided upon and accepted by many different branches, 2273; if guns and ammunition and works were, following the Admiralty lines, taken away from the Director of Contracts, the change would be a very bad one, 2289-95; attaching a contract staff to each department would not work well; it is better that the officer who deals with the contractor, and to whom the contractor looks, should be an officer independent of the requisitioning department, 2304-8, 2371, 2433; none of the things now purchased by the Director of Contracts would be better purchased if obtained through the Supply Departments, 2311-17; a mere central reviewing department, from the fact that it has no results to bring out, and is charged with no function except mere review, would be likely to drop into desuetude, and not be supported by people in authority, 2387, 2421-2; apart from the question of principle, if the Contracts Branch were broken up and the Director's share of the work transferred to the Director-General of Ordnance, it would be a further concentration of work on an Officer who is already very heavily loaded, 2412-6; there would be a probability of corruption creeping in if the Director of Contracts were eliminated, 2422, 2431-4.

4. CLERICAL ESTABLISHMENT.

(a.) *Present Number, Status, and Division of Duties.*

As regards the Higher Division, the Ridley scale should be adopted; the War Office is very unfairly treated in not having as good a chance of picking its men as other offices, 5169-79; the establishment of Higher Division Clerks is between 50 and 60, 5172; looks to having a Higher Division Clerk as principal and another as his deputy, or second, in all the large subdivisions, 5173.

(b.) *Substitution of Military for trained Civilian Staff.*

The better plan would be to have no Higher Division men in the Military Branches; there should be an increase in the number of Military Officers, and matters so arranged that the continuity of the work of the Office should be preserved by those Officers succeeding one another, 5136-40, 5182-6, 5190-8; it would be extremely difficult to obtain a sufficient number of military clerks to staff completely the Military Branches, 5136; a mixture of classes is bad, the staff of a division should be all either Second Division Clerks or all Military Clerks, 5141-52; to have an interchange of Military Clerks between the districts and headquarters would be very risky indeed, 5153, 5180-81; the men selected to serve as

Sir R. H. KNOX—*continued*.

Military Clerks at the War Office are always the best men of their class, 5154-60; the Military Clerk is always slow, 5161, 5162, 5205; the main advantage, if not the only advantage, in having Military Clerks is that they get on better with Officers, 5161-8; Military Clerks, as regards quality and capacity, are not to be compared with Second Division Clerks, 5202-12.

5. DECENTRALISATION.

(a.)—*Local Audit.*

It would be an extravagant plan to provide a local audit for the examination of the great variety of accounts which exist in a district, 4055-62, 4072-4, 4138; it requires a considerable amount of experience and training to become acquainted with the regulations in a way to be able intelligently to examine Army accounts, 4059; local audit would give rise to variety of treatment in the interpretation of the regulations; important points would have to be referred to headquarters, 4063-5, 4179, 4182; there would be difficulty in making a very interchangeable staff, men would not so readily enter as Civil servants if they were liable to be moved about unless some further advantages were offered in the way of local pay, &c., 4066-71, 4180; it would have been a very difficult thing to have provided a special local audit out in South Africa, 4080-2; an expansion of the War Office, or a local audit office to meet the extraordinary circumstances of a war, would be an extremely difficult thing, 4082, 4182-5; if local audit were established, and Paymasters reduced to mere cashiers, the whole of the examination, including what is done by the Paymaster in the examination of the company accounts should be done locally, 4083; a system of local audit would lessen the knowledge and experience of the Accountant-General in the working of the regulations; he is able to deal with matters more intelligently if he has the actual accounts to deal with, 4123-5; local audit could not be entirely relied upon, there would have to be a test audit at the War Office, 4131-7, 4164-70; centralisation of all the audit at the War Office would be better than local audit, 4139; where the work is centralised, it is much easier to meet an excessive strain than where that strain affects many stations away from headquarters, 4184; it would be necessary to have highly trained and highly paid men in charge of the decentralised audit, 4195; the addition of officers to hold the position of cashiers simply, would increase the number of officials without increasing the efficiency of check, 4209.

SIR G. CLARKE.

3. CONTRACTS.

(a.) *Existing System.*

All communications between the superintendents of factories and the Director of Contracts have to go through the Stores Department, 2436, 2448-50; the cases of delay at the Arsenal are of almost daily occurrence in every branch of material supplied, 2346; details of three cases in which excessive delays occurred: in the first case the delay was occasioned by putting the work order up to competition, no one tendered who could supply and ultimately the order was placed with the firm he first recommended; in the other two cases the orders were not placed with the firms he recommended; he ultimately acquiesced in the firms chosen, as he had no power of satisfying himself first whether the firms could do the work, therefore felt obliged to raise no objection; both these firms failed to complete the orders, 2437-47, 2471-9, 2451-60; had he the power, could send men to inspect works which would enable him to say at once whether any particular firm's tender should be accepted or not, 2443-7, 2456-63; thinks he has the power to withhold his consent to the acceptance of a tender until he had sent an expert to assure him that the work could be done, but has never exercised that authority, 2461-3; it is necessary that regulations should be issued laying it down as the duty of the heads of departments to make inquiries as to the competence of firms to execute orders before their tenders are accepted, 2464-7; five orders were recently given to the trade for carriages alone, if those orders could have been placed in the Arsenal, there would be a saving of 411,000*l.*, 2459.

Sir G. CLARKE—*continued*.

(b.) *Transfer of Contracts to Military Departments.*

If purchases were made by heads of departments, there would not be any liability to abuses, but would not give power of purchase to heads of departments, would give it to the Store Department at Woolwich which has a strong interest in providing for the factories in the best and cheapest way, 2469; contracts should be made by the Contract Store Branch of the Arsenal which would mean very close personal check and would save great delay in time and correspondence, 2493-500; trials all cost money to the public, they are not done at the cost of contractors, therefore with a department anxious to push on work there would be a considerable saving of money, 2495; there should be a Central Reviewing Department in London having cognizance of all prices paid for materials above a certain amount, which should bring the buyer to book if the prices paid were too high, 2498-500.

COLONEL C. H. BAGOT.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

The constant communication with the Adjutant-General and Quartermaster-General leads to delay; it is inevitable; if it can be reduced it will lead to a more satisfactory carrying on of business 6636-41: the design for the hut for South Africa was not ready when the emergency arose, but there was hardly any delay in the Branch of the Inspector-General of Fortifications in getting the design out, 6642-58.

(b.) *Financial.*

The amount of new services that can go into the Estimates in any one year is largely governed by the amount of continuation services of the year before; there is, therefore, a rush at the end of the financial year in order to avoid lapses of money voted; such unexpended amounts should be carried to a suspense account; the present difficulties would be alleviated if the preliminaries could be got over more quickly and the works started earlier in the year, 6572-628, 6668-83; there must be a reserve in hand under Part III. in order to meet emergent services; the present reserve is not too large, 6619-23; it would give less trouble if Parts I., II., and III. were converted into only two divisions; it would also be advisable to separate capital charges, i.e., new buildings, from maintenance charges, 6659-64.

3. CONTRACTS.

(a.) *Existing System.*

Triennial contracts are made in all districts for all minor repairs and small new works up to 400*l.*, 2651; when the period is approaching at which the existing triennial contracts terminate, the schedules of prices on which they are based are revised under him by the Chief Surveyor, 2654-6, 2748-52; General Officer Commanding advertises for tenders upon the scheduled prices, the tenders are returnable to the Director of Contracts, and the General Officer Commanding indicates whether the man tendering is competent or not, 2658-66; the Director of Contracts settles which tenders shall be accepted, in consultation with the Inspector-General of Fortifications; there is no difficulty about this as a rule; any difference of opinion would be settled by the Financial Secretary, 2667-72, 2701-3; finds no difficulty or delay at head quarters in arranging the triennial contracts, 2673-6; has had no questions raised by General Officers Commanding as to the size of the triennial contract districts, 2677-83; unless a General Officer Commanding made a suggestion in regard to the limits of a district, would repeat the previous triennial contract, 2684-9; has constantly had complaints in Ireland, but not in England, through contractors not having competent agents on the spot, 2690-1; very seldom goes above the lowest tender, 2693; there is a condition in the contract that the contractor or his agent can be called upon to reside within three miles of the works; this is sometimes enforced, 2694-700; as between his department, the General Officer Commanding, and the Director of Contracts, the triennial system works perfectly well, 2705; sees no advantage arising from the intervention of the Director of Contracts in the contracts in the building trade, for he has no means of forming an inde-

Colonel C. H. BAGOT—*continued*.

pendent judgment on the question of prices, 2714-21; the fear of losing the Vote, the sum to be expended by the end of the financial year, often causes unwise hurry on the part of the Engineer departments, 2722-35; when a General reports a case of bribery or corruption in regard to his department, the case should, as a matter of ordinary routine, go to the Inspector-General of Fortifications first, and not to the Director of Contracts, 2736-47; would always refer to the General Officer Commanding before making any important changes in the schedules of prices on which triennial contracts are based; the General Officer Commanding is also afforded opportunities of suggesting alterations, 2756-7, 2762; does not think the present schedule of prices leads to higher prices for work than if the tenderers had, according to usual custom, to fill in their own prices, 2770.

(b.) *Transfer of Contracts to Military Departments.*

It would be a considerable convenience if their power to purchase stores were extended from 50*l.* to 250*l.*, 6665-7.

MR. ROBERT CHALMERS.

2. FINANCIAL CONTROL AND AUDIT.

(a.) *External Financial Control.*

Transfers between Vote and Vote require the sanction of the Treasury, which is subsequently authorised by Parliament in the Annual Appropriation Act, 3027-33, 3211-5, 3264; the formal previous sanction of the Treasury for a transfer between two sub-heads of the same Vote is not asked for unless some change of policy is involved, 3027, 3037-41; it is not the practice of the War Office, but it should be, to go to the Treasury for authority to utilise savings on one sub-head of a Vote in meeting an excess on another sub-head of the same Vote, 3045, 3046, 3216-26, 3277-84; all new Civil situations, if they carry with them rights to pension, have to be submitted to the Treasury, 3059; there is no possibility of minimising the correspondence with the Treasury on the subject of pensions, 3061-3, 3267-9; no new work of any magnitude is to be commenced without previous sanction of Parliament, but, if it is urgent, Treasury have power to sanction commencement without waiting for the Vote of the year, 3066, 3071-3; Treasury has no power to Vote money, can only sanction a new service if there is old money for it, has to be satisfied always that there is money, 3095, 3096; War Office has power to write off losses of stores up to 100*l.*, the General Officers Commanding up to 1*l.* for cash and 10*l.* for stores; the Treasury has no objection to extending the powers of the War Office in regard to cash, nor would there be any difficulty in empowering Generals to write off up to 5*l.* cash, 3127-32; it is assumed that the spending department, being responsible for efficiency, makes proper proposals in regard to what is to be done, and what is to be spent, 3220; would not be in favour of changing the present system so that the men should be voted without details, and a rough estimate of pay taken, relying upon the Accountant-General supplying the details at the end of the year, 3254; when the War Office Estimates reach the Treasury they are always gone through carefully to see whether there is anything in them upon which there is a difference of opinion, 3260, 3285-9; the troubles of the War Office, both in Supply and before the Public Accounts Committee, would be very much increased if the provisional powers conferred by Parliament on the Treasury were transferred to the Secretary of State for War, 3034; the value of the necessity of reference to the Treasury lies in the fact that it makes the Accountant-General keep a close watch on sub-heads, out of which excesses on Votes arise, 3042-4, 3212; there should be a reference to an outside body in regard to foreseen expenditure for which Parliament has made no provision, 3044, 3045, 3265; thinks there would be a considerable loop-hole in the Pay Warrant if the Secretary of State had power to dispense with its provisions without going to the Treasury, 3052; the Secretary of State's position would be much weaker if it were known he had a dispensing power to grant exceptions in individual cases, 3053, 3057, 3230, 3234-9; as regards money for other purposes than those of pay and allowances it would

Mr. ROBERT CHALMERS—continued.

probably be salutary if fuller powers were given to the War Office, 3055; in reference to Treasury control it is very important there should be uniformity, as far as possible, in the regulations, which govern the remuneration of men performing analogous functions for the State in different departments, 3064, 3065; it is very dangerous for a spending department to assume Parliamentary sanction for expenditure, 3067; it is most desirable that the anticipation of Parliamentary sanction should be extremely limited in extent, and the responsibility for that should be shared by an independent department, 3067-70, 3221; with regard to works and building services under Part I., the Treasury would be quite prepared to lump together the provision for the year for cognate works in a district, 3074-81, 3240-51; does not think, in Parts II. and III., the War Office would wish for greater freedom than they now possess, 3084-7; the power of the Treasury in regard to new works is practically limited to calling the attention of Parliament to the fact that estimates were made and had not been carried out; if it were an extremely bad case, Treasury would refuse to sanction the expenditure, 3088-94; the House of Commons originated the rule as to the necessity of Treasury sanction for purchase, sale, or exchange of land, or premises; the total under that rule might be increased, 3098-119, 3301; the rule for Treasury sanction in regard to services executed jointly with the Colonies is in order that there may be one central department to bring the other departments into harmony, 3120; for contributions towards cost of work, &c., made to public bodies or private individuals, the War Office always like to take the Treasury with them, 3122, 3123; previous Treasury sanction is always necessary for the insertion in Army Estimates of a service estimated to cost over 30,000*l.*, 3124-6, 3290; the War Office would be ill-advised to wish to take to itself and exercise by its Director of Contracts the power of granting an increased price to a contractor under a formal contract instead of getting an outside impartial department to assume the responsibility, 3133-47; the Treasury would have no difficulty in enlarging the limits of the rewards to inventors and royalties, if the War Office wish it, 3148-50; Treasury sanction has to be obtained for gifts of public property to Colonial Governments, public bodies, or individuals, 3151-3; if the Comptroller and Auditor-General took over the departmental audit of the War Office Accounts he would either surrender his present independent position or he would be apt to intervene in questions of administration, 3194-203; details of the general principles which guide the Treasury control of Army expenditure, 3204, 3205, 3262; is not aware that there is any dissatisfaction on the part of the War Office with the present Treasury control, 3206-10, 3225-7, 3231-3, 3263, 3275, 3276; the War Office does not appeal to the Treasury so frequently as the Admiralty; thinks the War Office should tend to conform to the practice of the Admiralty, 3038, 3292-8.

Mr. FRANK T. MARZIALS.**1. CONDUCT OF BUSINESS IN THE WAR OFFICE.****(a.) Administrative.**

The distribution of stationery should not be with the Central Branch, it should be distributed by the Store Branch, 7273; for the purposes of proper supervision and distribution of its work, the Registry should be under a Higher Division Clerk, 7274-80; is not in favour of the suggestion that each branch should have its own Registry, 7282-84; it would be a great mistake to have letters drafted or criticised in the Registry, 7285-6; it is necessary to have a Central Department to deal with all regulations, 7288; it will not be possible to simplify the Regulations until the matters they deal with are simplified, 7289; the Army Board is a useful institution, it would be better if it met at stated intervals, 7291-4; local professional inspection of works in districts by independent surveyors would be a good thing, 7299-312, 7335-6; when the Army Board, the War Office Council, or the Secretary of State, has to consider questions upon which different opinions have been expressed, the focussing of those opinions should be effected by the Central Branch, 7313-5.

Mr. FRANK T. MARZIALS—continued.**(b.) Financial.**

If the audit were transferred to the Auditor-General, the power of exercising judgment on the expenditure would probably be restricted within a very much smaller limit, 7265; there must be a central body in order to bring all the estimates into harmony, and to centralise and focus the amounts, 7295-8; the Finance Department should not be under the Military Department, 7263, 7316-34.

2. FINANCIAL CONTROL AND AUDIT.**(a.) External Financial Control.**

Does not think that the control of the Treasury is either needless or unreasonable, 3451-6.

(b.) Internal Financial Control.

If the Pay Department is kept down to the smallest peace limit, it is inadequate to the larger demands that are made upon it in time of war, 3317; the combination of the functions of a cashier, and those of principal auditor is not an undesirable one, with the audit of the War Office behind it, 3319; the arrangement under which the Paymaster lay outside the War Office, and the War Office audit was complete not only of those payments which the Paymaster had made himself, but those also of his subordinates, was the best system of audit, 3321; details of the method of auditing contractors bills, 3311, 3332-43; is constantly consulted, in a friendly and informal way, by officers, as to whether any action which they may contemplate would or would not conflict with rules, 3380-6; audit at the War Office means something more than is generally meant by audit; it means an examination to see if the expenditure is according to regulation, 3414; simplification of regulations is the great desideratum; does not think that regulation is carried too far and made a substitute for discretion, 3415-25; would not object to raising the power of the General Officer Commanding for writing off cash, 3457.

In an immense business like the War Office, it is desirable that there should be in the actual formation of the policy of the place a distinct Branch more permanent in its personnel than the Military Branches, and that that financial Branch should have the power of criticism and advice, 3795-811, 3817-20; in regard to payments under contract, the Paymaster is the officer who is responsible for seeing that the claim of the contractor is in accordance with contract, and correctly charged and computed; it is desirable that there should be this check upon the receiving department, 3826-47; before putting a regulation in force affecting Paymasters' work would consult the Quartermaster-General, and probably some half-a-dozen of the best Paymasters, 3854-5; has never known of any practical difficulty arising from an Officer Commanding keeping the private and public company funds in one banking account, 3856-9; it is desirable that the present audit of the Volunteer capitation charges, the Yeomanry charges, and charges by Post Office for money orders issued for Army Reserve should be continued, 3860-70; the present audit in regard to the payments made to pensioners, and to the Paymaster-General's Non-Effective Account might be reduced, 3874-80, 3887-92.

3. CONTRACTS.**(a.) Existing system.**

The proposal that the Contracts Branch should examine their own bills is not a sound one; an independent examination and check is desirable, 3893.

4. CLERICAL ESTABLISHMENT.**(b.) Substitution of Military for trained Civilian Staff.**

It is not desirable that clerks of the Higher Division should serve in the Military Departments, 7266; as a rule, military clerks are not quite as good as Second Division Clerks, 7268; military clerks employed at the War Office should be made interchangeable with the districts, 7271.

5. DECENTRALISATION.**(a.) Local Audit.**

If the Paymaster were a mere cashier, it would be undesirable that payments should be made without audit, 3309; in time a local audit office would lose

Mr. FRANK T. MARZIALS—*continued.*

touch of the traditions of the War Office, and come under the influence of the General Officer Commanding, 3323; as regards time, the representative of the War Office in Dublin would be no nearer a payer or payee in Cork or Belfast than he would be in London; outside a radius of 20 miles his personal intercourse would be nil, 3325, 3369-72; assuming it to be desirable to create a local War Office audit, it could be transferred bodily, but in that event it would be necessary to recreate an office for an equivalent number of men who would require greater supervision than those sent out, 3325-9; in regard to the current expenditure on bills, the local War Offices could send in to headquarters daily or weekly tabular statements showing how their bills were going, 3344-53; it might still be a convenience for large sums for bills to be paid from the War Office, 3350, 3551; the responsibility of the Paymaster would be limited to seeing that he was not making excessive issues, but the final audit would rest with the local War Office and not with the Paymaster, 3356; even in view of his responsibility as Accounting Officer, does not see why he should not accept the audit of his subordinates decentralised as well as of those in the War Office, 3357-61, 3367, 3368; for the purpose of supervising the local War Offices, it would no doubt be necessary to keep a small staff, who would pay surprise visits and report to the Accountant-General, 3365-67; the rules for the administration of a local audit would have to be somewhat more stringent than those adopted at headquarters, 3374; local audit would do away with correspondence on small matters, which at present give rise to a certain amount of irritation, 3376, 3377; if from the Paymaster is taken away the examination of a large portion of the payments he makes, the present number of Paymasters could be reduced, but in war time this would be regretted, 3388, 3389; if a local audit office is established, the clerk in charge must be a man of some standing, in order to hold his own with the General Officer Commanding, 3390; local audit would mean that at the various stations it would be necessary to have a staff more highly paid and of a superior kind to that with which it is possible to do the work when it is all in one place, 3391; if Paymasters were made cashiers, and only a sufficient number were maintained in peace time to do cashier's work only, that number would have to be largely augmented in war time to do cashier's work only, but such a system does not get rid of the audit which would be thrown back on the War Office examiners, the staff of which would also have to be increased, 3393-407; the local audit offices would contain a good many boys, but that sort of lad could not be taken for a foreign expedition, 3408-10; to reduce Paymasters to the position of simple cashiers, and to centralize all audit at the War Office, would mean an overgrown department at headquarters; it would mean immense concentration with an equivalent increase of correspondence, 3426-35; if local audit were established, a complete reorganisation of the Accountant-General's Branch would be imperative, 3439; if the local audit were made in full, and if it were taken as the final audit by the Accountant-General, the test audit at the War Office could be dispensed with, 3443, 3444; with a system of local audit it would be very difficult to provide a staff of Paymasters sufficient either in numbers or training for war, and also to supply from the War Office the additional amount of supervision that would be required, 3445-50.

Assuming that the Paymaster is to be only a cashier, if claims for direct payments are to be pre-audited before payment, it would be desirable to have local extension of the War Office, but if the full examination is done only after payment, the work can be better done at headquarters under one complete system and one head, 3770-1, 3821-5, 3850, 3851; if local audit were adopted, it would mean additional staff; it would be necessary to have in each district some financial representative of high standing and fairly well paid; the local examiner would also have to be of somewhat higher type than the one employed in the War Office, 3778-9, 3784; attaches great importance to those at headquarters being in close touch with the accounts, with the actual effect of what is done; if the accounts were taken away an additional source of knowledge would be taken away from headquarters, 3780-4, 3789; the audit and the administrative functions of the Accountant-General's

Mr. FRANK T. MARZIALS—*continued.*

Branch could be separated, but it would be at some cost and loss of efficiency, 3789-94; assuming that pre-audit of direct payments by the Paymaster is not necessary, a centralised War Office audit would be more economical than a local audit, 3848; directly decentralisation takes place there will be varieties of rulings, 3852.

COLONEL T. W. DRAGE.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

The payments for reservists and pensioners form the principal part of the work of the Pay Offices now in England, 3469-95; the Paymaster issues money on imprest to Captains of Companies and heads of departments; the imprests are cleared by accounts rendered at the end of each month, 3496-3511, 3602-10; the company pay lists are completely audited in the Pay Office; believes they are also audited at the War Office, 3512-25, 3739, 3740; the District Paymaster makes payments for small contracts for sums under 100*l.*, 3527, 3548-53; except at the districts the pay lists practically exhaust the imprests, and at districts the other payments under the imprests are comparatively small, 3528-33; the Station Paymaster is limited to the payment of troops; if he is District Paymaster as well, then he pays travelling allowances, contracts under 100*l.*, and miscellaneous services, 3530-43, 3674-86; officers have the option of drawing their pay and allowances through the agents or the paymaster, 3544; all payments made by District Paymasters are audited at the War Office, 3551; the Paymaster has nothing to do with the balance sheet of the company unless it shows that public money is being used for private regimental purposes, 3554-66; it would not be convenient for a company to keep separate accounts for its regimental and for its private funds, 3567-9, 3584, 3593, 3752, 3753, 3757-67; the Company Officer is allowed to have a balance of only 10*l.* of public money, 3577-9, 3592, 3611, 3612; sees no disadvantages in a system by which both public and private money is kept in the same company account if the regulations are complied with, 3595; the examination of travelling claims gives a great deal of trouble; has an Officer employed from about 9.30 in the morning to 4 in the afternoon checking them, 3613-23; the questions of local allowances do not give much trouble at home; each foreign station has its own local regulations, 3624-6; there are no means by which work on travelling claims could be reduced, 3627; before paying a claim under contracts requires a certificate from the Army Service Corps Officer that it is in accordance with the terms of the contract, 3641-4; checks all bills before paying them, finds a good many of them wrong, 3645-52; officers ought to have from five to seven years' service before they come to the Army Pay Department, and the maximum age limit should be lower than 35, 3661, 3666-9; officers who join the Pay Department from the Army, know more of the Service and its requirements than those who come from the War Office, 3662; thinks the Pay Department has been treated to some extent as a provision for men who were being turned out of the Service on account of age, 3663-5; there is not a needless amount of reference to the War Office by Paymasters, 3670-3; War Office observations on claims and on pay lists are not tending to increase; this to a certain extent is because the work of the officers of the Army Pay Department is better done now, 3711-17; the time that elapses between the rendering of an account and the receipt of the War Office observations is nothing like what it used to be, 3720; has made as many as 150 observations on a single company pay list, the errors arise from carelessness on the part of the company officer, 3717-25; the clothing compensation account is a terribly complicated business, the worst the Pay Department has had for any number of years; thinks it could be made to work more simply and easily, 3726-36; Paymasters are not consulted as to the working of regulations, but it is left to them to make representations to headquarters, 3736-8; the strength of the Pay Department has proved inadequate for the requirements of war, 3743, 3744; after 12 months of pay office work a military clerk ought to be a very good clerk, 3745.

Colonel T. W. DRAGE—*continued*.

5. DECENTRALISATION.

(a.) *Local Audit.*

It would be well that the General Officer should be in closer relations with the Paymaster, and consult him more in reference to the regulations, 3628-37, 3698-709; does not think it would answer in a big district, like Ireland, to reduce the paying centres and to disburse from Dublin; the work can be better done by not too much doubling up, and the Paymaster on the spot is a good deal of assistance to the local troops, 3688-90.

Mr. G. P. WIGHT.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

One-eighth of the company pay lists, and one-sixth of the district and direct charges are audited each month at the War Office, 3899, 3906-8, 3912-4; company and regimental funds are not examined, but in regard to the company pay lists which are fully examined, the company balance sheet is scrutinised in order to see that the company officer is not using public money to finance the different regimental funds, 3901-4, 3950-60; does not detect a great many errors in examining the Paymaster's account, 3909, 3938-41; when an account is completely examined the classification is reviewed, and mistakes of classification, which are very often numerous, are pointed out to the Paymaster, 3915-7, 3961-5; in order to lessen the work of classification, has endeavoured to get some of the headings of the estimates amalgamated, 3916-9; regimental officers have the option of drawing their pay through the Paymaster, but they very rarely avail themselves of it; they find it a convenience to have a banker in London act as their agent, 3920; the agent's accounts are always very thoroughly examined, they are carelessly rendered, 3922-30; at foreign stations the staff and departments normally draw their pay through the Paymasters, 3927; it would be a very good plan, in order to prevent overcharges of officer's pay, if the Paymaster paid the officer by sending a cheque or money order to the credit of the officer's account with the Army agent, 3928-37, 3941; company officers are frequently quite inexperienced in financial matters, and often lose or muddle away the cash; the colour-sergeant in many cases is also a man of no experience, 3943-8; under the present system the test audit of one-eighth is sufficient, 3949; the Paymaster's audit of the accounts is, in theory, complete; he reviews every penny that is charged against the public, 3957; company pay lists are made out in duplicate, and the duplicate pay list is sent to the War Office as a voucher in relief of the imprests issued to the Paymaster; in regard to the question of obviating the compilation of the seven-eighths of the monthly account not examined at the War Office would not regard as satisfactory, and in lieu of those pay lists a simple certificate from the Paymaster stating that he had examined the accounts in detail and satisfied himself that all the payments were correct and according to regulation, 3966-4000, 4040-2; it is a distinct economy that the Paymaster audits the regimental accounts, 4004; the errors in the company pay lists audited by the Paymaster are often very numerous, 4020, 4021; to remove all audit from the Paymasters, and centralise it at the War Office, would be a bad system, 4032; in view of the complicated regulations the present system works as well as any such system ever can work in time of war, 4033; the present examination and audit are rendered far more difficult than need be by the complications in the soldier's pay and allowances, 4034-9.

5. DECENTRALISATION.

(a.) *Local Audit.*

Local audit would be a very wasteful system, the Paymaster being merely a cashier the benefit of his present services would be to a large extent lost, and there would have to be a great multiplication of the civil staff, 4001-19, 4023-29; if local audit were introduced correspondence with headquarters would be increased, for there would be a difficulty in securing uniformity in the interpretation of the present difficult and complicated regulations, 4024-9.

Colonel E. BAINBRIDGE.

2. FINANCIAL CONTROL AND AUDIT.

b. *Internal Financial Control.*

The local auditor, acting for the Accountant-General, examines as well as audits the factory accounts, they are also dealt with by the Comptroller and Auditor-General who has representatives at Woolwich, 4401-18.

3. CONTRACTS.

a. *Existing System.*

Buys by contract the annual stores in bulk, but all demands for new stores come to him from the heads of the department concerned and are then sent on to the Director of Contracts, 4240-58; certain classes of tenders are always referred back to him before acceptance, but the rule does not apply to all tenders, 4259-67; is sometimes compelled by the Contracts Branch to accept the lowest tender, details of an instance in which the Contracts Department forced the factories to accept the tender of an unsatisfactory contractor who was unable to supply the order, tender subsequently cancelled, and order placed with firm originally recommended by the factories; has had a good many such cases, 4268-96, 4493-500; things are often wanted in a hurry when there is no time for making experiments; in such cases applications are made that the contracts be given to certain firms, 4295, 4496; in order to avoid delay and correspondence accepts the ruling of the Director of Contracts; has the right of appeal to the Director-General of Ordnance, but does not exercise it, the contracts are too numerous, 2646 in the year 1899-1900, 4284-7, 4323-8; is allowed to visit the works of contractors and does so to a great extent; the Director of Contracts has asked to be informed of such proposed visits in order that a representative of his Branch may be present, 4297-304; in order to widen the area of supply the Director of Contracts gets as many firms as possible on his list, which is also frequently added to by the factories, but there is no general co-operation between the two Departments in the compilation of the list, 4305-22, 4532, 4533; protests, as a rule, against orders being given to firms he knows nothing about, 4342-4; there is great delay in the delivery of stores which is frequently occasioned by want of plant in Contractor's works, 4347-56; understands that the infliction of fines is hardly ever imposed; if it were done rigorously prices would be put up, 4357; has purchased in default, but it is always a difficult process, 4360; if the Director of Contracts had on his list only such firms as the factories recommended the delays would be reduced, 4361; would rather have power of purchasing to a greater extent than calling for tenders to a greater extent; is at present limited to orders of 25*l.*; in 1899-1900 out of a total of 2,646 the Director of Contracts placed order for 629 of 25*l.* or under; if the factories were given a limit of 500*l.* would have had 2,231 out of 2,646; if 250*l.*, would have had 1,998 out of 2,646, which would represent 130,000*l.*, as against 1,250,000*l.* for the remaining 648 contracts, 4362-72, 4502; would feel very comfortable if he got a voice in the selection of tenders and an increased limit of unrestricted purchase, 4377-400; has every inducement to take the lowest tender whenever there is any reasonable hope of getting the work done, as it affects the prices of factory work, 4481; maintains a familiar acquaintance and touch with the sources of supply of all materials he requires, 4503-10.

b. *Transfer of Contracts to Military Departments.*

If the making of contracts were left with the factory would issue tenders to only those firms whom he knew would supply; would give trial orders so as to add to his list and would then take the lowest tender without hesitation, 4329-40, 4361, 4482-9; if contracts were left with him it would require skilful and careful management on his part to obviate charges of making monopolies, &c., 4373, 4374; if the duty of getting tenders were left with him would get the contracts placed in less than the present average time of one month, 4331, 4482-8; if he made the contracts would want an addition to his staff, 4527-9.

MR. HAY FREDERICK DONALDSON.

3. CONTRACTS.

(a.) *Existing System.*

Supplies specifications of machinery required to the Chief Superintendent who sends the demands to the Director of Contracts, 4545, 4546; if he says he wants a particular machine the Director of Contracts places the order with the firm he mentions, 4549, 4550 4593; pays visits of inspection in order to keep in touch with what is going on throughout the mechanical trades of the country, 4562-7.

(b.) *Transfer of Contracts to Military Departments.*

It would probably be a better system if they were able to order things direct, rather than go through the Director of Contracts, as a commercial engineer sees no advantage arising out of the intervention of the Director of Contracts in the purchase of machinery, 4548, 4549, 4591, 4592; if he took over the making of contracts it would in many cases quicken matters, and in others it would not, 4594-9.

MR. J. T. LA BROOY.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

The factory accounts are audited by the War Office Local Auditor and a representative of the Comptroller and Auditor-General; in reference to the detailed amounts expended, the Local Auditor and the Comptroller and Auditor-General do not appear to go over the same ground, but the balance sheet, the capital account, the indirect expenditure statement, and the comparison of prices they both examine fully, both in regard to figures and methods, 4635-47, 4658, 4661-74, 4694-8, 4735-9; the auditing of the cost records is important to every one of the customers of the factories; practically the factories cost accounts are audited on behalf of the customers, 4648-53; during the 12 or 13 years that his office has been in existence there has not been a single bill prepared there for payment to contractors on which a wrong amount has been paid, the bills are most carefully examined before they go forward, 4689-93, 4715; sees no reason why the whole of the audit should not be done by a Branch of the War Office at Woolwich, 4699, 4716.

The object of stock-taking is to get at the cost of the articles produced in the Ordnance factories; details of procedure adopted, 9081-99, 9137-86; there is at present an independent branch of the Accountant-General's Department at the Arsenal; much of the work is done by personal conference, but even that system might be extended; there is still a large amount of correspondence over trifling things, 9117-27; has frequently to deal with different branches of the War Office on the same question, 9128; details in reference to the distribution of labour between day-work and piece-work in the Ordnance factories, 9187-218.

3. CONTRACTS.

(a.) *Existing System.*

All demands for small purchases up to 25l. are brought to him; invites three tenders mostly from local people in every case, 4623-34, 4717-34; in cases of urgency has purchased things direct, and then applied to the Director of Contracts for covering authority, which has always been given, 4627-9; if the factories were allowed to purchase direct up to 250l. instead of 25l. there would be about a week saved in every case; it would dispense with about three-fourths of the present references to the Director of Contracts, 4675-80, 4728, 4729, 4740-50; in one year alone as many as 1,500 telegrams were sent to contractors urging on deliveries; it is only a very small percentage of delays that is reported to the Director of Contracts, 4681-3.

MR. J. A. FLYNN.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

Is very dissatisfied with the regulations, they are very long-winded and badly expressed, 4953-61; in theory, his Branch has no voice in the policy of a regulation, but if it appears to be a bad regulation, they do, in

MR. J. A. FLYNN—continued.

fact, raise the question, 4962-9, 4990, 5038-5041; the Pay Warrant cannot be made a good book of regulations unless some of the conditions are simplified, 4970, 4971; the pension regulations are excessively complicated; half the complications would be wiped out if pensions were based on length of service, with some allowance for superior service, 4970-7, 4984, 4998; the subject matter of the regulations is made more intricate than it need be, or would be, if the detailed effect were considered before the decision was given, 4978; of late years there has not been much difference in the number of regulations issued, 4992; only a small financial loss would have been occasioned by making the regulation simpler, and calling the messing allowance pay, and treating it as pay, 5003; the complication of the regulations arises from the desire of the War Office to have a regulation to cover everything, 5018; the red tape in the regulations arose from the War Office being too much harried by the Treasury, and by questions in the House of Commons, and by too much attention being paid to newspaper criticism, 5019, 5020; if he noticed a new regulation restricting the power of the General Officer Commanding which conflicted with the intention of the Decentralisation Committee, would call special attention to it and ask whether it should go out, 5027; it is the duty of his Branch to see that all the Branches concerned are consulted before any regulation is issued, 4956, 5028-31.

GENERAL SIR EVELYN WOOD.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

It would be an advantage, in regard to the work of the Office, and it would relieve the Commander-in-Chief of a certain amount of detail if there were a weekly meeting of the heads of the Military Departments, something analogous to the old Adjutant-General's meeting, which should act as an advisory board to the Commander-in-Chief when necessary; this meeting should be presided over by the Adjutant-General, 5520-56; would deprecate the Army Board sitting without the Commander-in-Chief, 5548-50; House of Commons questions are largely responsible for the degree of centralisation that prevails, 5590-92, 5614-21; a great deal of work that is now done in the Adjutant-General's Department could be transferred to the Military Districts, 5590, 5593, 5613.

(b.) *Financial.*

The Adjutant-General has not at present any authority in matters of finance; power should be given to him to settle matters of minor importance without reference to the Accountant-General's Department, 5490-503, 5575; it is desirable that in peace time military officers should have an opportunity of gaining experience in regard to the financial powers which they are called upon to exercise in time of war, 5497, 5498, 5557, 5558, 5584; a closer touch between the Military and the Finance Departments is essential to smooth and economical working, 5582; the present system by which the Pay Department is placed under the Quartermaster-General is better than a system by which they would be under the Financial Secretary, 5562-4; the Adjutant-General's Department should be in a position to frame estimates and financially consider the cost of the present and proposed personnel of the Army, 5624, 5625.

4. CLERICAL ESTABLISHMENT.

(a.) *Present Numbers, Status, and Division of Duties.*

The staff of his department is inadequate to carry out the duties properly, 5504, 5505, 5566. There is dissatisfaction amongst the clerks in his Division; they feel, when they come to the Military side, that they are lost, and that they will get no more promotion, 5518, 5519.

(b.) *Substitution of Military for Trained Civilian Staff.*

In the Military Division Higher Division Clerks should be replaced by Staff officers, retaining the Second Division Clerks in their present places, military clerks being used for returns, &c. and other non-confidential matters, 5506-17, 5559; there is no difficulty in getting Staff clerks from the Army good enough for the duties they should perform in the War Office, 5560, both the officers and the Military Clerks should be interchangeable between the War Office and the Districts, 5515.

GENERAL SIR R. HARRISON.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

In favour of the institution of a Board of Officers, something analogous to the Adjutant-General's Meeting, which should meet at stated intervals and settle questions in which the various departments are concerned, 5636-57, 5894-5908, 5928-30; the Inspector-General of Fortifications should be allowed to get what staff he requires, and settle their conditions of service, 5768-72; the Inspector-General of Fortifications should make his own regulations, 5817-19; barracks work could not be done more economically by civil agents; if it were taken away from the Royal Engineers and given to civilians there would be a large duplication of staff, 5865-81; the correspondence between the departments of the War Office is more diffuse than it need be, 5882-93, 5927, 5931-35, 5936-55; the purchase of ranges is a very complicated question, 5956-60.

(b.) *Financial.*

Would do away with the present audit carried out in his office by the Accountant-General; would have a test check by the surveyors, but would practically accept the certificate of the officer on the spot, supervising his work by periodical inspections, 5721-67, 5909-17; up to the present has not had nearly enough money to maintain the barracks and keep them in proper order; Part I. should be confined to new work, and all repairs and maintenance should go to Part III., 5773-7; the Inspector-General of Fortifications should bring forward for annual estimate or for loans such new services as Army changes render necessary, 5778-5816; it would be more convenient to carry out large new works under loans, leaving maintenance to the annual estimates, 5780, 5783, 5925-26.

3. CONTRACTS.

(a.) *Existing System.*

Contracts should not be given to unsatisfactory contractors; the Inspector-General of Fortifications should have the deciding voice in all works contracts, 5918-20.

(b.) *Transfer of Contracts to Military Departments.*

Should be at liberty to make his own contracts without any reference and without an intermediary or agent in the person of a Director of Contracts, 5663-73; would like to have power of purchasing stores up to 500l. 5921.

4. CLERICAL ESTABLISHMENT.

(b.) *Substitution of Military for trained Civilian Staff.*

Is in favour of the association of civil clerks with officers at headquarters in order to maintain continuity, 5820-36.

5. DECENTRALISATION.

(b.) *Transfer of Contracts to Military Districts.*

Would give general officers power to make contracts up to 4,000l. or 5,000l., allowing them to determine the list of contractors, and settle which contract should be accepted, 5674-5720.

(c.) *Delegation of Control to Military Districts.*

The purchase and sale of lands should be carried out at headquarters, and should not be entrusted to general officers acting in conjunction with the Treasury Solicitor, 5837-64.

MR. J. M. BULL.

2. FINANCIAL CONTROL AND AUDIT.

(b.)—*Internal Financial Control.*

The existing audit of the Works Branch is practically illusory, 5965-6033; the surveyor at headquarters should be attached to the Accountant-General's Department in order that the rates and prices in a contract may be properly checked; would have more confidence in surveyors serving under the Accountant-General, 6034-44, 6062-4, 6132, 6153, 6154; in order to avoid errors in quantities there must be local inspection; would send inspectors to examine buildings from time to time, 6045-51, 6084; instances in which certificates in reference to work, &c., are

Mr. J. M. BULL—*continued.*

demonstrated to be worthless are frequent enough to throw grave suspicion on the value of the whole system under which they are rendered, 6066-154.

MR. B. B. CUBITT.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE

(a.) *Administrative.*

Sees no objection to the Inspector General of Fortifications taking charge of his own printing, but it is more convenient for all the printing to go through C.2., where they have a knowledge of what matter exactly is placed out to the various printers, and are thus able to spread the work in times of pressure, 6686-6757; except on the possible ground of economy, there would be an enormous advantage if the War Office could make its own arrangements with the printers, 6758-65.

MAJOR-GENERAL SIR C. GROVE:

1.—CONDUCT OF BUSINESS IN THE WAR OFFICE:

(a.) *Administrative.*

The Army Board at present is not a sufficient machine for centralising all military proposals and for keeping a general purview over expenditure; a Board is not a good machine for going into questions of detail, 6887, 6882, 6883; all letters from the military department should go out in the name of the Commander-in-Chief, 6936-43; it would be a good thing if the Army Board were made a working reality, and if the Commander-in-Chief through that Board settled questions, not only of policy, but also the cost of that policy, and the finance required to carry it out, 6962; there is too much correspondence at present, a large part of this is in reference to the interpretation of regulations; the correspondence would be reduced if the regulations were simplified and codified, 6993-7; the direct Military Adviser of the Secretary of State should be the Commander-in-Chief, 6998-7003; the Commander-in-Chief should have the entire Military responsibility for the efficiency of the Army, 7028-36; there is on the Military side of the War Office a want of some officer or central office to see that all questions have been properly discussed before being submitted to the Commander-in-Chief, 7035, 7036; there is a steady tendency at the War Office, due to outside causes, and the intervention of the House of Commons in matters of executive military detail, for matters connected with the military direction of the Army to pass from the military officers to a civilian exposed to the political pressure of parties; the result is injurious to the Army, and to the administration, for it causes over centralisation and useless work, 6920-35; the civil side of the War Office is too much mixed up with pure administration, and the responsibility of the military heads is thereby impaired, 6973-9, 7008, 7009.

(b.) *Financial.*

The separation of finance from the Military Department does harm; the Commander-in-Chief is the only one who can say properly which are the most important Army Services; to carry out this duty he should have a proper staff of officers capable of advising him in regard to the financial bearings of proposals, 6866-8, 6955-63; would place on the Commander-in-Chief the responsibility of keeping a general watch over Military expenditure and of supervising and causing to work together all the great Supply Branches; it would tend to real economy, 6869-81, 6972-5; the number of small matters which under the Pay Warrant require the approval of the Secretary of State, have diminished of late years, but are still far too many, 6911-9; every spending department should frame its own estimates, and keep an account of its own expenditure, 6987-92; the dissociation of military action from account keeping and finance has tended to make officers think very little of the money side of questions, 6866, 7037, 7051, 7052; the Commander-in-Chief should have the amount of money allotted to him by Parliament placed absolutely at his disposal, and the sum once settled should be voted for a certain term of years, 7058-72; War Office audit should be dropped altogether; the audit should be done only by the Auditor-General, 6988, 7071; the concentration of financial control in the Civil Branch

Major-General Sir C. GROVE—continued.

permits that Branch to spread itself over military questions of all kinds; the tendency is to take away from military people the direct responsibility which ought to rest on them, 6980-6, 7010, 7051; the Accountant-General's Department, except the audit, should be transferred from the Civil to the Military side of the War Office, leaving with the Financial Secretary only a small staff of clerks, 7040-50, 7062.

4.—CLERICAL ESTABLISHMENT.**(b.) Substitution of Military for trained Civilian Staff.**

If the Accountant-General's Department were transferred to the Commander-in-Chief, it would be immaterial whether the staff was civil or military; would prefer it to be military, 6901-10; would approve of Military Officers in the place of Higher Division Clerks; and Military Clerks in the place of Second Division Clerk; would have them interchangeable between the War Office and the districts, 6944-54.

5. DECENTRALISATION.**(a.) Delegation of Control to Military Districts.**

Would make General Officers Commanding responsible for the complete financial bearing of all proposals they put forward, 6884-95, 6987-71, 7053-7.

COLONEL J. T. SKINNER.**1. CONDUCT OF BUSINESS IN THE WAR OFFICE.****(a.)—Administrative.**

There is an advantage in present system under which the Quartermaster-General has to be consulted in regard to all site plans, but a great deal of delay occurs from the fact of the Inspector-General of Fortifications being at the Horse Guards and the Quartermaster-General in Pall Mall, 7096-106, 7151, 7156-69; the responsibility of the Quartermaster-General comes in, in many ways, in reference to rifle ranges; at present, the Quartermaster-General is responsible for all ranges, 7107-52; there is a certain amount of duplication in the functions of the Quartermaster-General and the Inspector-General of Fortifications; this could be avoided if both branches were under the same roof, 7153-5, 7174; directly a site plan is settled, the Quartermaster-General drops out of the question, and the Inspector-General of Fortifications takes up the plan for construction, 7167; continuation services absorb nearly the whole of the annual estimates; the only way to arrive at a satisfactory method is to transfer all the bigger services to loans, 7172; the precise position of the Quartermaster-General and the Inspector-General of Fortifications in regard to sites and buildings might, with advantage, be more clearly defined, 7175-95, 7204-12; where there has been delay in the provision of a rifle range, it has arisen, as a rule, from failure to find a suitable site at a suitable price, 7238-60.

4. CLERICAL ESTABLISHMENT.**(b.)—Substitution of Military for trained Civilian Staff.**

In a branch such as that of the Quartermaster-General it is better to have only civil clerks; does not require any of the Higher Division; sees no objection to a certain admixture of civil and military, but the military clerks should be interchangeable with the districts, 7196-203.

5. DECENTRALISATION.**Delegation of Control to Military Districts.**

Small minor matters in regard to buildings and sites might be left to Generals Commanding, but all larger questions must come to headquarters for decision, 7077-95, 7213-9.

MAJOR-GENERAL SIR F. MAURICE.**1. CONDUCT OF BUSINESS IN THE WAR OFFICE.****(a.) Administrative.**

Almost all the questions that force correspondence on the War Office will obtain nearly as much with the Army Corps as they do now with the Districts 7354, 7361, 7364-6, 7380, 7540-1, 7573; if Army Corps are established it will be necessary, in order to provide drafts for foreign service, to have Army Corps at home fitting to Army Corps abroad, 7378-93; the effect of the recommendations of the Decentralisation Committee has been to reduce the correspondence between the War Office and the

Major-General Sir F. MAURICE—continued.

Districts to about one-third of what it was, both in normal and abnormal times, 7400, 7401; it is vitally necessary that officers of the War Office who have power to decide questions locally should have their time sufficiently free to go down and see for themselves what is going on in the different districts, 7421-4, 7461-6, 7502, 7503, 7554-9; when the Army Board has to decide upon questions affecting a district the General Officer Commanding should be given an opportunity of expressing his views personally upon the subject, 7438-43; in order to relieve the pressure upon the War Office there should be more independent heads, with power to settle questions as they arise, 7454, 7541; confusion in regard to War Office decisions arises owing to the unsatisfactory way in which letters are treated on receipt in the Registry; would prefer the old system of addressing letters to the head of the particular department which deals with the subject matter, 7467-99, 7530, 7531, 7545-9; the abolition of the office of Deputy Adjutant-General, Royal Artillery, has in practice proved a disastrous failure, 7505, 7506; his difficulties as General Officer Commanding arise, not so much from insufficient power as from the difficulty of getting through matters which must be referred to the War Office; the delay that occurs there is due to the fact that individuals are overworked, 7540, 7541, 7553, 7560-2; the source of all centralisation and of all congested correspondence is practically to be attributed to the principle of continual check and revision to avoid insignificant mistakes, 7563-7; many of the regulations bind everybody much too tightly for the public advantage, 7573, 7574, 7581.

5. DECENTRALISATION.**(a.) Local Audit.**

If the officer in charge of the Local Audit Office had power to deal with questions finally it would very much simplify correspondence, 7397-9; if it is merely a question of interpreting the financial regulations as they exist, then a Paymaster in a district is adequate, but if it is a question of spending money irrespective of regulations, then a financial adviser is essential, 7460, 7579, 7580.

(b.) Delegation of Control to Military Districts.

As a rule anything which can be dealt with in a district without interfering with another district is now, so far as the War Office is concerned, left to the discretion of the General Officer Commanding, 7354-60; if the Army Corps districts are to be self-contained and autonomous, it will be necessary to furnish each with complete facilities for the various courses of instruction and drill, 7368-77; at the present has all the power which could be usefully exercised by himself and his officers in his district, 7457-59; the preparation of drafts should be put out to districts, 7518-20.

MAJOR-GENERAL L. V. SWAINE.**1. CONDUCT OF BUSINESS IN THE WAR OFFICE.****(a.) Administrative.**

If decentralisation is to be effected in the War Office it will be necessary either to reduce the powers of the Adjutant-General or abolish his office; he should be replaced by an Inspector-General for each arm of the Service, 7587-603, 7884-98, 7905-19, 7934-41; delay arises from the fact of there being only one huge Registry at the War Office; if the Adjutant-General were replaced by Inspectors-General, each letter could then be marked with the arm of the Service to which it referred; the work between the districts and headquarters would be expedited if each department of the War Office had a Registry of its own, 7587-91; so long as the powers of the Adjutant-General are undefined he is able unduly to extend their practical application; there should be an Inspector-General for each arm of the Service, who should not only inspect but control the discipline of his own branch, 7604-34, 7888-90, 7934-7; the regulations are badly worded, 7733-46; since the Decentralisation Committee reported the number of returns sent to the War Office from the districts has diminished; there is room for still further reduction, 7752-63; has no difficulty in getting replies from the War Office, 7848; would take the Barrack Branch from the I.G.F. and put it entirely under the Quartermaster-General, 7898-900, 7956-61.

Major-General L. V. SWAINE—*continued.*

(b.) *Financial.*

Contractor's bills of 100l. and upwards now sent to the War Office should be paid by the district paymaster, 7747-51.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

Many of the certificates at present required for allowances as well as for stores are very unsatisfactory, 7675-717; the station paymasters should pay district charges, 7730-35.

5. DECENTRALISATION.

(a.) *Local Audit.*

There would be no difficulty in local audit; it would make the district more self-contained, 7735, 7736; local audit would save trouble and correspondence with the War Office, 7739-46; if a local auditor were placed at every Army headquarters the English system would approximate very closely to the German system, 7764-75; it would be perfectly satisfactory to accept the German system of audit—details, 7872-85.

(b.) *Transfer of Contracts to Military Districts.*

Unless very considerable improvements can be introduced into the Barrack Branch of the Inspector-General of Fortifications' Branch and into the Contracts' Branch, is strongly of opinion that some of their work should be deputed to the Generals of Districts, 7635-49; a great many of his difficulties in regard to contracts would be obviated if he had a very large share in settling the composition of the list of approved contractors; Generals Commanding might have a freer hand in regard to contracts generally, 7650-74.

(c.) *Delegation of Control to Military Districts.*

The appropriation of quarters in a barrack should be within the discretion of the General Officer Commanding without reference to the Quartermaster-General, 7718-29; if the suggested six military districts are to be effective, they must be treated very much on the German plan, they must contain their administrative functions within themselves—details, 7776-843; if command in the districts were concentrated in the hands of Army Corps Commanders there would be no difficulty in supplying the drafts necessary for foreign service, 7962-75.

GENERAL SIR REDVERS BULLER.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

Many of the regulations affect principles which the War Office alone is cognisant of; it has the power of taking a very much wider view than the officer in the district can, 8087; would like to see the military government of the War Office organised exactly like an Army in the field; all staff training should be the same in principle, and every District the same, and then, when moved into the field, everything would go on the same; at present, when war breaks out, officers have to learn duties which they are never allowed to touch in peace time, 8088-108, 8167; assuming that the suggested six Army Corps were established in a year or so, it would be quite within the power of the Staff already existing to administer them, 8158-62; it is very important to simplify the regulations and make them more elastic, 8171, 8179, 8240-3; unless the military heads of departments in the War Office are allowed to consider in concert all military proposals before they go to the Secretary of State, there will be a failure to obtain proper co-ordination, 8172, 8173, 8219-39; it is essential for the efficient working of the Army that the Army Board should be set up somewhat on the lines of the Adjutant-General's meetings and should hold its meetings at fixed periods 8231-9.

(b.) *Financial.*

The great blot in the military administration of the Army, has been that there has never been any attempt to place financial responsibility on the Commander-in-Chief, and through him on the Generals Commanding, 7985, 8165-7; Army finance is over-controlled by regulations; would make them

General Sir REDVERS BULLER—*continued.*

more elastic, 7989, 7990; every building should be a lump sum Vote, 8020-7, 8124-32; troubles in regard to works sometimes arise through a want of system between the Districts and the War Office, 8028-35; instead of allowing a percentage of material for wear and tear, would allow the Officers Commanding a unit so much money for the upkeep of his stores, leaving him to purchase whatever was necessary, 8045-9, 8197-201; does not want the War Office to be an Accountant Department; it should be an Audit Department, and its decisions should be enforced through a Military Department, 8120; when the policy of expenditure has been settled the heads of the Spending Departments should be allowed to administer their own Votes, subject to audit, to see that the money is spent according to regulations, 8174, 8175; would place accounts under the Military, and leave the audit to the Civil Branches, 8176, 8177, 8194; it is a very difficult thing to lay down fixed rules for pay and allowances, but would be inclined to consolidate more than is done now, 8183-8186.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

The money recovered by way of disallowance is not worth the tremendous friction nor worth the great distrust it teaches officers stationed in the districts to feel of the War Office, 7989, 8006, 8052 8059; in lieu of the numerous certificates now required on travelling and other claims, would accept the examination of the Paymaster, subject to subsequent War Office audit, 8050-64; his panacea all through for the simplification of account is a more direct responsibility for expenditure, 8038, 8148.

3.—CONTRACTS.

(a.)—*Existing System.*

The Contracts Branch suffers from being too much detached from the Army; the War Office is not as good as it ought to be, as it is not particular enough about the contractors who are put on the list, 8014-9, 8133-6; for large expenditure there is not centralisation enough; large contracts, anything over 2,000l., are better left in the hands of a Central Office, 8018, 8019, 8137-47; the Director of Contracts should not force upon a General Officer Commanding a contractor to whom the general objects, 8163, 8164.

(b.)—*Transfer of Contracts to Military Departments.*

Is strongly in favour of there being an independent Contracts Branch, 8012-4, 8019; in order to be particular with contractors, advocates the retention of the Director of Contracts and his branch, 8019.

5. DECENTRALISATION.

(a.) *Local Audit.*

Would have a local auditor to audit, and question, if necessary, a general's expenditure; the auditor should be a War Office official of high class, 7990-8011.

(c.) *Delegation of Control to Military Districts.*

Has had no trouble in regard to Stores, but does not like the Store Accounts, nor the principles upon which they are kept; has made proposals for a change of system, 8036; would make the Commanding Officer of a unit responsible that he did not exceed the regulations in regard to Stores; would treat irregularities as breaches of discipline, 8037-43; the only matter in regard to which decentralisation can actually take place is in the expenditure of money, 8086, 8148; for the lesser building works all responsibility should be centralised in the Districts, and for larger works in the Central Office, 8146, 8147; the General should be responsible for the money that is spent within his district; he should be the Accountant to the War Office, and the Accounts should be subject to his revision and decision before they go to the War Office; the accuracy of the accounts should be enforced as a matter of discipline, 7986-8011, 8073-5, 8110-22, 8148-62, 8168, 8188-94, 8202-18, 8241-54; wants to see, throughout the Army, more responsibility placed upon individuals; that can only be done by delegating financial powers in the expenditure for stores, 8109.

LIEUTENANT-GENERAL SIR W. F. BUTLER.

1.—CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.)—*Administrative.*

The reports and returns now rendered by the districts to the War Office are too voluminous; they are compiled in too great detail, and the detail is unreliable, even when completed, 8259-81, 8390, 8442-5; does not see how any effective decentralisation of work can be arrived at without a fundamental reorganisation of the forces; the Field Army ought always to be kept distinct from the Garrison Army, 8390-400, 8431; real decentralisation is not a question of throwing so many more duties upon the districts, it is a question of delegation of authority and responsibility right through the whole fabric of the Army, 8260, 8446-50.

(b.)—*Financial.*

The rates for pay and the allowances for clothing are capable of simplification, the present complicated system of accounts is unnecessary and uncalled for, would give consolidated rates, daily, weekly, or monthly; would also consolidate the pay of officers in districts, and treat them as officers at headquarters are treated, 8355-75.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

It is necessary that officers should be charged with paying their men and with the company's accounts, but would put every officer through a course of book-keeping, 8375-7.

3.—CONTRACTS.

(a.)—*Existing System.*

All contracts should be thrown open to the whole of the general public by advertisement, 8300-2; the General Officer Commanding should have a leading voice in the placing of contracts, 8304.

5. DECENTRALISATION.

(a.) *Local Audit.*

It would be an improvement to have local audit; does not see why the District Paymaster should not do it, 8344-54; if there were a proper system of decentralisation and a proper expert financial staff, the paper work and the administrative work of the General would be proportionately lessened, 8457-60.

(c.) *Delegation of Control to Military Districts.*

The General Officer Commanding should have, as far as possible, a free hand within the regulations, 8283; would give a General a Works Vote and a Vote for Stores for his district, fixed upon the average of the last five or seven years, and allow him, subject to audit and inspection, to maintain his district and improve his district so far as he could improve it, 8283-97, 8324, 8336, 8471-92, 8516-8; in regard to most stores would make the districts self-contained, 8380-6; if his suggestions in regard to a Works Vote, to pay, clothing, stores, &c. were adopted, and if there were local audit in the district the General in command should be able, subject to periodical inspection, to carry out his command with practically no reference to the War Office beyond his annual report, 8412-28; so far as the district is concerned, there is room for more decentralisation in the work of the various officers of the General's staff, 8457-70; there should be a distinct division made between the military staff duties and the purely administrative and business matters carried on under a General, and at the head of each division there should be a staff officer, 8431-5, 8493-7; the provisions of drafts and the question of recruiting could not be decentralised, they must be arranged from headquarters, 8520-6; details showing how far various suggestions made to the Decentralisation Committee could be carried out, 8508-15; it would be a good thing if a sum of 300l. a year were, subject to audit, placed at the absolute disposal of the General of a district to meet small services, 8326-40; the Chief Paymaster should be the financial adviser of the General Officer Commanding; the position of the Paymaster should be much more recognised, 8342, 8378; if the General had power, and was largely consulted on the question of the list of approved contractors, it would make the authority he now has of dealing with contracts up to 2,000l. more of a reality, 8325; would like to have the present limit of 2,000l. extended up to 5,000l., 8292, 8441.

MAJOR-GENERAL SIR T. FRASER.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

The present system, under which purchases and sales of land are carried out direct by the War Office, is by far the best arrangement that could be made, 8695-7; in view of the functions and interests represented by the Adjutant-General, the Quartermaster-General, and Inspector-General of Fortifications, it is essential that they should all be consulted in reference to the acquisition of rifle ranges, 8744-9.

(b.) *Financial.*

It would be a great advantage if Generals knew in October what works would be included in the following year's estimates, work could then be begun on the 1st April, 8561-71; canteens should be under Civil managers, or retired officers, 8580-90; the War Office supervision of the General's financial functions, as it exists now, is a very valuable factor; it collates the system of looking at things from a broad point of view, 8654-7.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

It would be a deplorable thing if the payment of the men were not in the hands of the Company Officers, but the present complication of the accounts and regulations take up too much of the Officers' time, and injures their military efficiency, 8539-56, 8709-11; in the future Paymasters must give a very great deal more assistance to Officers, and Officers must look for assistance from the Paymaster's office, more than they do now, 8554-60.

3. CONTRACTS.

(a.) *Existing System.*

There would be no difficulty in accepting the lowest tender, provided the General had a large voice in determining the list of contractors, and if no one was kept on the list without his consent; the final decision in regard to placing a contract ought also to rest with the General, 8658-69, 8718-33.

5. DECENTRALISATION.

(a.) *Local Audit.*

It would be a very great advantage to have a local section of the War Office Finance Branch, under a Local Auditor, with powers delegated from the Accountant-General, in every district to help the General Commanding, and the final audit should be made in the district, 8533-9.

(c.) *Delegation of Control to Military Districts.*

It would be possible, subject to inspection, to give a General a certain sum for the maintenance of buildings in his district, and allow him to spend it at his own discretion, 8670-5; in order to perfect decentralisation, would give the General in a district the entire power and responsibility of dealing with everything arising under his command without reference to the War Office, except in reference to unforeseen and largely important questions, 8698-708, 8712, 8734-40; it is a serious matter that at present the time of the Staff of the district is largely taken up with all sorts of formal and routine matters, 8713, 8714; the limit within which a General has power to write off over-payments should be extended from 1l. to 10l., 8578-80; in order to lessen reference and correspondence, would give Generals larger powers in regard to forage, casting of horses, extra duty pay, &c.; details, 8593-653, 8698; within the limits of the decision of the highest authority the General of a district ought to have the freest hand that he can in the expenditure of the money allotted to his district, 8735-40.

GENERAL H.R.H. THE DUKE OF CONNAUGHT.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

There should be a qualified War Department Land Agent in Ireland, 8755; letters from the Inspector-General of Fortifications department should be sent in triplicate to the districts, 8783-8; the scope of the ordnance workshops in Ireland should be extended, 8789-811; approved of the abolition of the office of Deputy Adjutant-General, Royal Artillery, 8900-4; is strongly in favour of the appointment of Inspector-General of Cavalry, Infantry, and Artillery, who

General H.R.H. the DUKE OF CONNAUGHT—*continued*.

should report direct to the Commander-in-Chief, 8904-14; on the whole there is not much delay in the correspondence with headquarters, the delay generally arises when there is a financial side to the question submitted, 8915-23; the Army Board should give a General the option of attending its meeting when they are dealing with matters affecting his district, 8932-5; one of the greatest defects of the present military system is that it does not inculcate responsibility at an early age and drive it home right through an Officer's career, 8961-8, 8988-92; the regulations are very complicated, but, as a matter of discipline, it is necessary that all should be guided by the same principles throughout, 9070-9.

(b.) *Financial.*

Would be in favour of giving a money allowance in lieu of supplying material in kind for the upkeep of equipment, 8928-38; does not approve of deductions from soldiers' pay, 9060-2.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

The men should be paid by Paymasters, not by Officers commanding, at present undue demands are made upon Company Officers by the detailed work on accounts, 9049-52, 9067-9.

3. CONTRACTS.

(a.) *Existing System.*

Generals should have the deciding voice in the formation of the list of approved contractors, 8776-82.

5. DECENTRALISATION.

(a.) *Local Audit.*

Is in favour of transferring to Dublin a section of the Accountant-General's Department to conduct the audit there under a local auditor; it would be very valuable to have the staff interchangeable with the staff at the War Office, 8814-61, 8958-60.

(c.) *Delegation of Control to Military Districts.*

The greatest possible powers, in regard to transfers, &c. should be given to Generals commanding Army Corps in their own commands, 8862-72; if all the necessary information were centred in the home battalion the drafts could be arranged in the districts; this would be an advantage, as it would place more responsibility on the Generals, 8873-99; subject to inspection and annual report, and to those communications which are essential for the regulation of the United Kingdom as a whole, the General in command of an Army Corps should have a lump sum voted to cover the expense of running his command in regard to works, stores, &c., and should also have full control and be allowed to undertake those duties and responsibilities which are now carried out by a General commanding an Army Corps in Germany, 8936-50, 8973-4, 9017-42; the effects of the recommendations of the Decentralisation Committee are satisfactory, but decentralisation on much broader and more direct lines is really required, 8980, 8993-4; the time of Staff Officers is largely taken up with administrative work which has no direct relation to the training of the Army for war; would prefer to have the duties divided on the German system, 8982-7, 9010, 9011; would give the Commander of the Forces in Ireland, and the Generals commanding Army Corps, greater powers in regard to the purchase of land; the Commanding Royal Engineer in Ireland should have additional staff to enable him to settle all financial points in regard to land, 8754-64; would give Generals fuller powers in regard to the Works Votes; they should have full power over all savings, 8765-75; would like to see the limit under which a General can authorise local purchases of stores raised to 100l., 8812-4; Generals should have the power to write off up to the limit of 5l. in the case of cash, and 50l. in the case of stores, 8839-43; would like to see a system introduced under which 200l. or 300l. should be placed absolutely at the disposal of the General of a district to meet small exceptional services, 8924-31; the full financial administration of an Army Corps district could, subject to the requirements of Parliament be carried out by the General in Command, 8951-7; Generals Commanding should have full power to deal with everything connected with contracts up to 2,000l., 8776-82.

MR. C. HARRIS.

2. FINANCIAL CONTROL AND AUDIT.

(b.) *Internal Financial Control.*

Details of the proceedings of the Committee on Ordnance Factories Accounts, which recommended that individual piece-work, as distinct from gang piece-work, should be introduced in the Ordnance factories wherever possible, 9227-62; one of the duties of the Local Auditor is to compare factory prices year by year, and factory prices with outside trade prices, 9253; neither the record of materials nor the wages account of the Building Works Department can be trusted as records of minor matters, 9265-82; details of the procedure adopted in the quarterly stock-takings; they are sometimes omitted, when that happens it is found that prices differ from the correct standards, 9283-304; details of the system employed for estimating the cost of piece-work in the factories; the system affords an opportunity of discovering that there is a definite return for the expenditure of a definite sum of money in a Government establishment; without some guarantee of that sort there is considerable danger that there may be little return for expenditure, 9305-57; doubts very much whether the adoption of day-work would lead to simplification in the accounts, 9325; the present form of account is due to the requirements of Parliament, it is also the only machinery by which anybody at Woolwich can be held responsible for what he does, 9327-42.

COLONEL F. S. ROBB.

1.—CONDUCT OF BUSINESS IN THE WAR OFFICE.

(b.) *Financial.*

There would be no advantage in putting a section of the Accountant-General's Branch on the Military side of the office; is perfectly satisfied with the present arrangement under which the work is carried out as between himself and the Finance side, 9596-602, 9611.

4.—CLERICAL ESTABLISHMENT.

(a.) *Present Number, Status, and Division of Duties.*

Is strongly opposed to there being any First Division Clerks in his branch, can keep up the continuity of office procedure perfectly well with Second Division Clerks, 9378, 9379, 9510; his branch is very much understaffed, and it is at present hopelessly disorganised, 9381, 9430, 9431, 9464-505, 9518-49; his branch should be divided into sections, the Military being placed under an officer, and restricted entirely to returns, &c., the papers on organisation, administration, and personal matters being allotted to the Civil clerks, 9381-3, 9430, 9431, 9575, 9580-85.

(b.)—*Substitution of Military for trained Civilian Staff.*

Would not employ military clerks on anything except very technical work of a non-confidential nature, 9377, 9378, 9380, 9507, 9508; would prefer to have an officer in charge of his branch rather than a Higher Division Clerk, 9379, 9410; sees no difficulty in working with mixed classes, 9381.

5. DECENTRALISATION.

(c.) *Delegation of Control to Military Districts.*

In the interests of India and the foreign stations, it is essential to retain control of the drafts at headquarters, to decentralise the work among the Army Corps would lead to complications and very much increase correspondence, 9363-73, 9384, 9454-63, 9550-68; details of various matters now dealt with by the division of the Adjutant-General's Department known as A.G. 1, which might be decentralised and left to the districts to settle, 9385-453, 9592-5; if any big scheme of decentralisation is adopted, uniformity cannot be expected, 9602-5.

COLONEL A. M. DELAVOYE.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

The division of the education of the Army, officers under the Military Secretary, and men under the Adjutant-General, is not a good thing, 9663-6, 9675, 9707, 9708, 9776; the incidence of responsibility has been changed since the abolition of the office of Director-General of Education, 9657, 9682, 9687-91, 9725; candidates

Colonel A. M. DELAVOYE—*continued*.

coming into the Army through the Militia are badly up in the subjects of general education, 9737; in regard to the authority exercised by his department over the training of officers, the present arrangement of business is quite satisfactory, but the promotion examinations might be a little less cumbersome; the reappointment of a Director-General would be of no value in reference to the dispatch of business, 9731, 9732, 9741-3; has nothing to suggest in the direction of obtaining more power or responsibility or authority in regard to the education of the Army, 9761, 9762; owing to the lack of accommodation in the Military Colleges, will have, in future, to take more officers from the Militia than ought to be the case, 9763-8; the educational standard of the cadets who pass into the colleges is very good indeed, 9769-72; the course at Sandhurst should be extended to 18 months, 9775.

4. CLERICAL ESTABLISHMENT.

(b.) *Substitution of Military for trained Civilian Staff.*

Military clerks are not generally satisfactory, 9693-701.

LIEUTENANT-COLONEL J. S. COWANS.

1. CONDUCT OF BUSINESS IN THE WAR OFFICE.

(a.) *Administrative.*

On the whole the Registry distributes the correspondence without undue delay and to the right department, 9872-6.

Lieutenant-Colonel J. S. COWANS—*continued*.

(b.) *Financial.*

His branch administers the Transport Vote, but they have to apply to the Financial Branch to see how the Vote stands at any particular moment, 9798-804, 9841-62; there would be no advantage in bringing the accounts part of the work connected with the Transport Vote in closer connection with his branch than it is at present, 9861, 9862, 9871, 9880.

4. CLERICAL ESTABLISHMENT.

(a.) *Present Numbers, Status, and Division of Duties.*

Thinks he ought to have some one at the head of his branch; a capable staff clerk would be ample; a First Division Clerk would be rather wasted, 9809-12, 9815, 9877-79.

(b.) *Substitution of Military for trained Civilian Staff.*

Is in favour of the Civil clerk; the work of his branch is infinitely better done by Civil than it would be by Military clerks, 9806, 9866-70.

5. DECENTRALISATION.

(c.) *Delegation of Control to Military Districts.*

It would not be possible to decentralise the work of embarkation and conveyance of stores and place it under the Generals in the districts, 9783-7; the work in connection with the drafts could not be more decentralised than it is at present, 9819-32.

HEADINGS UNDER WHICH THE INDEX IS ARRANGED.

Accounts, General.	Losses.
Adjutant-General's Meetings.	Middlemen.
Army Board.	Military Education.
Army Corps.	Military Staff, Establishments, and Departments.
Audit of Accounts.	Naval Contracts.
Balances.	Ordnance Committee.
Barracks and Buildings.	Ordnance Factories.
Bills.	Ordnance Workshops.
Buyers.	Pay and Allowances.
Buying in default.	Pay Department.
Canteens.	Penalties.
Civil Staff, Establishments, and Departments.	Printing and Stationery.
Contracts. (<i>See also</i> "Director of Contracts," "Purchases," and "Tenders.")	Purchases.
Contractors (<i>See also</i> Middlemen.)	Registry.
Correspondence.	Regulations.
Decentralisation. (<i>See also</i> "Army Corps," "Contracts," "Local Audit," &c.)	Rifle Ranges.
Delays (Contracts).	Specifications.
Director of Contracts, Branch of.	Stock-taking.
Drafts.	Stores.
Estimates.	Sub-letting.
House of Commons.	Supplies.
Inspection.	Tenders.
Lands and Land Agents.	Treasury.
Loans.	Votes.
Local Audit.	Works.

INDEX.

ACCOUNTS, GENERAL:

The payments for reservists and pensioners form the principal part of the work of the Pay Offices at the present time in England (*Col. Drage*), 3469-95.

The Paymaster issues money on imprests which are cleared by accounts rendered at the end of each month, 3496-3511, 3528-33, 3602-10.

The Station Paymaster is limited to the payment of troops; if he is District Paymaster as well he pays other miscellaneous services, 3530-43, 3647-86.

Officers have the option of drawing their pay and allowances through the Agents or the Paymaster, 3544.

The examination of travelling claims gives a great deal of trouble, 3613-23.

Questions of local allowances do not give much trouble at home, 3624-6.

There are no means by which work on travelling claims could be reduced, 3627.

War Office observations are not tending to increase, 3711-17.

The time that elapses between the rendering of an account and the receipt of the War Office observations is nothing like what it used to be, 3720.

Has made as many as 150 observations on a single company pay list, 3717-25.

The clothing compensation account is a terribly complicated business, 3726-35.

Does not think it would answer in a big district like Ireland to reduce the paying centres and to disburse from Dublin, 3688-90.

One-eighth of the company pay lists and one-sixth of the district and direct charges are audited each month at the War Office (*Mr. Wight*), 3899, 3906-8, 3912-4.

Does not detect a great many errors in examining the Paymaster's accounts, 3909, 3938-41.

Mistakes in classification are very often numerous, 3915-7, 3961-5.

In order to lessen the work of classification has endeavoured to get some of the headings of the estimates amalgamated, 3916-9.

Officers rarely avail themselves of the option of drawing their pay through the Paymaster, 3920, 3927.

Agents' accounts are always very thoroughly examined, they are carelessly rendered, 3922-30.

To prevent overcharges the Paymaster might pay an officer by sending a cheque or money order to the Army Agent, 3928-37, 3941.

Company Officers are frequently quite inexperienced in financial matters, the colour-sergeant in many cases is also a man of no experience, 3943-8.

Would not regard as satisfactory a general certificate in lieu of the seven-eighths of the company accounts which are not examined, 3966-4000, 4040-2.

It is a distinct economy that the Paymaster audits the regimental accounts, 4004.

The errors in the company pay lists audited by the Paymaster are often very numerous, 4020, 4021.

Would not accept certificates from Paymasters in lieu of duplicate pay lists (*Sir R. Knox*), 4213-27.

Many of the certificates at present required for allowances, as well as for stores, are very unsatisfactory (*Maj.-Gen. Swaine*), 7675-717.

Station Paymasters should pay district charges, 7730-5.

Does not like the stores accounts nor the principles upon which they are kept (*Sir R. Buller*), 8036.

The General should be responsible for the money spent within his district; the accuracy of the accounts should be enforced as a matter of

ACCOUNTS, GENERAL—cont.

discipline, 7986-8011, 8073-5, 8110-22, 8148-62, 8168, 8188-94, 8202-18, 8244-54.

The money recovered by way of disallowances is not worth the great distrust and friction it causes, 7989, 8006, 8052, 8059.

His panacea all through for the simplification of accounts is a more direct responsibility for expenditure, 8038, 8109, 8148.

Would place the accounts under the Military and leave the audit to the civil branches, 8176, 8177, 8194.

It is necessary that officers should be charged with paying their men and with the company accounts (*Sir W. Butler*), 8375-7.

The present complication of the company accounts takes up too much of the Officers' time and injures their Military efficiency (*Sir T. Fraser*), 8539-60, 8709-11.

The men should be paid by Paymasters, not by Officers Commanding Companies (*H.R.H. The Duke of Connaught*), 9049-52, 9067-9.

ADJUTANT-GENERAL'S MEETINGS:

It would be an advantage to have a weekly meeting somewhat analogous to the old Adjutant-General's meeting (*Sir Evelyn Wood*), 5520-56.

Is in favour of the institution of a Board of Officers, something analogous to the Adjutant-General's meeting, which should meet at stated intervals (*Sir R. Harrison*), 5636-57, 5894-5908, 5928-30.

The Adjutant-General's meetings considered proposals from the heads of departments (*Sir R. Buller*), 8231-9.

ARMY BOARD:

The Army Board has been invaluable for the purposes of the War (*Sir H. Brackenbury*), 5474.

It would be very useful if the Army Board met regularly and at stated intervals (*Lieut.-Gen. Sir C. M. Clarke*), 6795-6816.

It would be of the greatest possible advantage if the Army Board reverted to its original plan, and also met at stated intervals (*Sir R. Knox*), 5225-73, 5284-6.

The Army Board is a useful institution; it would be better if it met at stated intervals (*Mr. Marziale*), 7291-4.

Would deprecate the Army Board sitting without the Commander-in-Chief (*Sir Evelyn Wood*), 5548-50.

The Army Board at present is not a sufficient machine for centralising all Military proposals and for keeping a general purview over expenditure (*Sir C. Grove*), 6867, 6882, 6883, 6962.

When the Army Board has to decide upon questions affecting a district, the General Officer Commanding should be given an opportunity of expressing his views personally upon the subject (*Sir F. Maurice*) 7438-43.

Unless the Military heads of departments in the War Office are allowed to consider in concert all Military proposals before they go to the Secretary of State, there will be failure to obtain proper co-ordination (*Sir R. Buller*), 8172-3, 8219-39.

The Army Board should be set up somewhat on the lines of the Adjutant-General's meetings, and should hold its meetings at fixed periods, 8231-9.

The Army Board should give a General the option of attending its meeting when his district is under discussion (*H.R.H. The Duke of Connaught*), 8932-5.

ARMY CORPS:

If the Army Corps districts are to be self-contained and autonomous, it will be necessary to furnish each with complete facilities for the various courses of instruction and drill (*Sir F. Maurice*), 7368-77.

ARMY CORPS—*cont.*

If Army Corps are established, it will be necessary, in order to provide drafts for foreign service to have Army Corps at home fitting to Army Corps abroad, 7378-93.

If the suggested six Military districts are to be effective, they must be treated very much on the German plan (*Maj.-Gen. Swaine*), 7776-843.

It would be quite within the power of the Staff already existing to administer the six Army Corps (*Sir R. Buller*), 8158-62.

The full financial administration of an Army Corps should be carried out by the General in command (*H.B.H. The Duke of Connaught*), 8951-7.

AUDIT OF ACCOUNTS :

The system of examination now carried out is absolutely necessary in the public interest (*Sir R. Knox*), 4126, 4127, 4206.

The examination of one-eighth of the company and one-sixth of the district accounts is sufficient and satisfactory, 4111-3, 4173.

The present system under which the Paymaster acts as cashier and auditor works very satisfactorily, 4111-3, 4128-30, 4199, 4200.

Audit is strengthened very much by coming as quickly as possible after the financial transactions are completed, 4079.

A Paymaster's audit should not be accepted as final under any circumstances, 4164-6.

The payment of Officers direct from the War Office, or through the company accounts, would entail additional work without any corresponding advantage, 4228-36.

The addition of Officers to hold the position of cashiers simply would increase the number of officials without increasing the efficiency of check, 4209.

The combination of functions of cashier and principal auditor is not an unreasonable one with audit of the War Office behind it (*Mr. Marzials*), 3319.

The old system under which the Paymaster lay outside the War Office, and the War Office audit was complete, was the best system of audit, 3321.

Audit at the War Office means an examination to see if expenditure is according to regulation, 3414.

To centralise all audit at the War Office would mean an overgrown department at headquarters, 3426-35.

Before putting into force a regulation affecting Paymaster's work, would consult Quartermaster General and probably some Paymasters, 3854-5.

The present audit of Volunteer, Yeomanry, and Army Reserve charges should be continued, 3860-70.

The audit in regard to the Non-Effective Account and payments to pensioners might be reduced, 3874-80, 3887-92.

The audit and administrative functions of the Accountant-General's Branch could be separated, but it would be at some cost and loss of efficiency, 3789-94.

If the audit were transferred to the Auditor-General, the power of exercising judgment on the expenditure would be restricted within a very much smaller limit, 7265.

The company pay lists are completely audited in the Pay Office (*Col. Drage*), 3512-25, 3739, 3740.

All payments made by District Paymasters are audited at the War Office, 3551.

Under the present system the test audit of one-eighth of the company accounts is sufficient (*Mr. Wight*), 3949.

The Paymaster's audit of accounts is, in theory, complete, 3957.

To remove all audit from the Paymasters, and centralise it at the War Office, would be a bad system, 4032.

The present system of audit works as well as any such system ever can work in time of war, 4033.

Would do away with the present audit carried out in the Inspector-General of Fortifications' Office by the Accountant-General (*Sir R. Harrison*), 5721-67, 5909-17.

The existing audit of the Works Branch is practically illusory (*Mr. Bull*), 5965-6033.

AUDIT OF ACCOUNTS—*cont.*

Instances in which certificates in reference to work, &c., are demonstrated to be worthless are frequent enough to throw grave suspicion on the value of the whole system under which they are rendered, 6066-154.

War Office audit should be dropped altogether; the audit should be done only by the Auditor-General (*Sir C. Grove*), 6988, 7071.

In lieu of the numerous certificates now required on travelling and other claims, would accept the examination of the Paymaster, subject to audit (*Sir R. Buller*), 8050-64.

The Finance Department of the War Office should be an audit, not an Accountant Department, and its decisions should be enforced through a Military department, 8120.

The War Office audit is not an audit at all, it is a computation, 7995, 8005, 8117.

BALANCES :

It would be an immense advantage if unexpended sums could be re-voted and given for use in the succeeding year, instead of being returned as unexpended balances (*Sir H. Brackenbury*), 5389-08.

Unexpended balances on any year's Vote should be carried to a suspense account (*Col. C. H. Bagot*), 6572-6628, 6668-83.

In order to alter the present system and to avoid hurried expenditure at the end of the financial year, it would be necessary to obtain a general Act providing that unexpended balances should remain to the credit of the Department for which they were authorised (*Mr. Chalmers*), 3163-83.

With regard to company balances, has never known any practical difficulty arise from an Officer Commanding keeping the private and public company funds in one banking account (*Mr. Marzials*), 3856-9.

The Paymaster has nothing to do with the balance sheet of the company, unless it shows that public money is being used for private regimental purposes (*Col. Drage*), 3554-66.

It would not be convenient for a company to keep separate accounts for its regimental and for its private funds, 3567-9, 3584, 3593, 3595, 3752-67.

The company officer is allowed to have a balance of only 10l. of public money, 3577-9, 3592, 3611, 3612.

Company balance sheets are scrutinised in order to see that the company officer is not using public money to finance the different regimental funds (*Mr. Wight*), 3901-4, 3950-60.

BARRACKS AND BUILDINGS :

It would be a very good thing to relieve the Inspector-General of Fortifications of the bulk of his purely civilian building work, and place it under the Office of Works (*Mr. Fleetwood Wilson*), 4905-18.

The power of deciding on the merits of all sites and buildings should rest with headquarters, General Officers Commanding are not best fitted to be vested with uncontrolled power of committing the War Department in regard to permanent barrack schemes (*Col. C. M. Watson*), 6166-72, 6193, 6314-58, 6496-507, 6528-37.

Barrack buildings could not be transferred to the Office of Works, 6450.

Except for very small matters, questions of sites should be settled at headquarters (*Lieut.-Gen. Sir C. M. Clarke*), 6770-6.

Army Service Corps Officers could not be charged with the maintenance of barracks, 6817.

Barracks work could not be done more economically by civil agents (*Sir R. Harrison*), 5865-81.

Small minor matters in regard to buildings and sites might be left to General Officers, but all larger questions must come to headquarters for decision (*Col. Skinner*), 7077-95, 7213-9.

There is an advantage in the present system under which the Quartermaster-General has to be consulted in regard to all site plans, 7096-169.

The precise position of the Quartermaster-General and the Inspector-General of Fortifications in regard to sites and buildings might, with advantage, be more clearly defined, 7175-95, 7204-12.

BARRACKS AND BUILDINGS—cont.

The appropriation of quarters in a barrack should be within the discretion of the General Officer Commanding, without reference to the Quartermaster-General (*Maj.-Gen. Swaine*), 7718-29.

Would take the barrack branch from Inspector-General of Fortifications and put it entirely under the Quartermaster-General, 7898-900, 7956-61.

For lesser building works all responsibility should be centralised in the districts, and for larger works in the central office (*Sir R. Buller*), 8146-7. Every building should be a lump sum vote, 8020-7, 8124-32.

It would be possible to give a General a lump sum for the maintenance of buildings in his district (*Maj.-Gen. Sir T. Fraser*), 8670-5.

BILLS:

It would save work and result in economy if the contract bills were audited in the Contract Branch (*Mr. A. Major*), 241-248.

Would not agree to the audit of bills being carried out in the Contracts Branch (*Sir R. Knox*), 2393.

Would leave the professional checking of bills entirely to stations; would have inspections and occasional test audit (*Col. C. M. Watson*), 6367-408.

If the Accountant-General took over the examination of the works bills he would have to duplicate the staff of the Inspector-General of Fortifications, 6447-9.

Details of the method of auditing contractors' bills (*Mr. Marriale*), 3311, 3332-43.

Local auditors could send to headquarters daily or weekly tabular statements showing how their bills were going, but it might still be a convenience for large sums for bills to be paid from the War Office, 3344-53, 3551.

The proposal that the Contracts Branch should examine their own bills is not a sound one, 3893.

The Paymaster is the officer who is responsible for seeing that the claim of a contractor is in accordance with the contract, 3826-47.

Checks all bills before paying them; finds a good many of them wrong (*Col. Drage*), 3645-52.

During the 12 or 13 years he has been at Woolwich no wrong amounts have been paid on bills (*Mr. La Brooy*), 4689-98, 4715.

Contractors' bills of 100l. and upwards now sent to the War Office, should be paid by the district Paymaster (*Maj.-Gen. Swaine*), 7747-51.

BUYERS:

The maintenance of the Director of Contracts as buyer for all is a most useful check upon all consuming departments (*Mr. A. Major*), 253-6, 278.

The practice followed by the Director of Contracts as a buyer is analogous to that adopted by great firms, 282-4, 342.

If a buyer were established in the factories, his procedure would be exactly the same as that now followed by the Director of Contracts, 256-61.

If the Buying Branch were placed under him as well as the Inspecting Branch, there would be no more danger of collusion with manufacturers than there is at present (*Sir H. Brackenbury*), 482, 483.

Finds the Director of Contracts the most convenient buyer for the supplies he requires (*Sir C. M. Clarke*), 1464-77.

BUYING IN DEFAULT:

If goods are not delivered in time, the Director of Contracts buys in default (*Mr. A. Major*), 51.

The present system of buying in default is a farce (*Sir H. Brackenbury*), 398.

Some things cannot be bought in default, they are not trade articles (*Mr. Fleetwood Wilson*), 1589.

Has purchased in default, but it is always a difficult process (*Col. Bainbridge*), 4360.

CANTEENS:

Canteens should be under Civil managers or retired officers (*Sir T. Fraser*), 8580-90.

CIVIL STAFF ESTABLISHMENTS AND DEPARTMENTS:

The Contracts Branch is understaffed (*Mr. A. Major*), 39, 231, 249, 2963-73.

There should be a Military Under Secretary of State over all the administrative and supply services (*Sir H. Brackenbury*), 5416-85.

Would replace all the Civil staff in his Branch by Military clerks; it is not desirable to have the classes mixed, 5294-7, 5370.

The continuity of his office does not suffer from having no Higher Division Clerks, 5301-10.

In Branches where continuity and secrecy are necessary is in favour of the employment of the Civil rather than the Military clerk (*Lieut.-Gen. Sir C. M. Clarke*), 6830-7, 6840-4, 6855-9.

When at Pimlico would gladly have taken over his own contract work with a small addition to the staff (*Mr. Fleetwood Wilson*), 1625, 1651.

The responsibility for the efficiency of the Civil staff of the War Office rests with the Permanent Under Secretary, 4846-60.

Is not satisfied with the present working of the War Office, 4854.

There should be a Chief Clerk and Registrar who should be the immediate head of all the Central Branches; he should supervise and improve the correspondence emanating from the War Office, 4785-7, 4795, 4873.

The Central Branches should be placed entirely under the control of the Assistant Under Secretary of State, 4788, 4837.

It would be impossible for the Assistant Under Secretary of State to act as Chief Clerk and Registrar with any success, 4792-4.

Would get rid of clerks in their first year's service who did not promise to develop into efficient public servants, 4839, 4928-35.

It would be a great advantage to have a Central Branch where young men, on joining the Office, could be educated in a good tone of clerical work, 4924-7.

The clerical work of the War Office would be better done by fewer people, provided the general average standard was raised, 4866.

The Contracts Branch has never been properly staffed during the 18 years he has been in it (*Mr. Perry*), 1998.

Supervision of the drafting of letters would be quite outside the functions of the head of the Registry (*Sir R. Knox*), 5089-94.

In favour of the institution of a Board consisting of the Deputy Chiefs of the War Office, 5274-53.

The Ridley scale should be adopted for the Higher Division, 5169-79.

The establishment of the Higher Division is between 50 and 60, 5172.

There should be a Higher Division Clerk as head and another as his deputy in all large subdivisions, 5173.

It is desirable that there should be in the actual formation of the financial policy of the War Office a distinct Branch more permanent in its personnel than the Military Branches (*Mr. Marriale*), 3795-811, 3817-20.

The focussing of opinions upon questions which the Army Board, War Office Council, or Secretary of State has to decide should be effected by the Central Department, 7313-5.

The Finance Department should not be under the Military Department, 7263, 7316-34.

It would be a great mistake to have letters drafted or criticised in the Registry, 7285-6.

If he made contracts would want an addition to his staff (*Col. Bainbridge*), 4527-9.

There is dissatisfaction among the civilian clerks of the Second Division in his department; they feel, when they get to the Military side, that they will get no more promotion (*Sir Evelyn Wood*), 5518, 5519.

The staff of his department is inadequate to carry out the duties properly, 5504, 5505, 5566.

The Surveyor at headquarters should be attached to the Accountant-General's Department; would have more confidence in surveyors serving under the Accountant-General (*Mr. Bull*), 6034-44, 6062-4, 6132, 6153, 6154.

The Civil side of the War Office is too much mixed up with pure administration (*Sir C. Grove*), 6976-9, 7008, 7009.

The concentration of financial control in the Civil Branch permits that Branch to spread itself

CIVIL STAFF ESTABLISHMENTS AND DEPARTMENTS—*cont.*

over Military questions of all kinds, 6980-6, 7010, 7051.

There would be no advantage in putting a section of the Accountant-General's Branch on the Military side of War Office (*Col. Robb*), 9596-602, 9611.

Is strongly opposed to there being any Higher Division Clerks in his Branch, 9378-9, 9510.

There would be no advantage in bringing the accounts part of the work connected with the Transport Vote in closer connection with his Branch than it is at present (*Lieut.-Col. Cowans*), 9798-804, 9841-62, 9871, 9880.

CONTRACTS. (*See also* "Director of Contracts," "Purchases," and "Tenders.")

The majority of district contracts are correct (*Mr. Major*), 111-113, 326.

Price is not necessarily the governing consideration in regard to placing contracts; time of delivery and other things are taken into account, 156-172.

The system now followed in the distribution of business in regard to contracts works well; no part of the work could be transferred to the districts with any advantage to the public service, 233-7.

The system of making contracts at out-stations occasionally results in a loss, 332.

The existing system of contracts might with advantage be improved; the Director-General of Ordnance should make his own contracts (*Sir H. Brackenbury*), 364-83.

The officer responsible for supply should have the power of dealing with that supply himself, in every step of it from first to last, 2592, 2620-2.

A General Officer Commanding can make a contract for 2,000*l.*, but the Director General of Ordnance has no such power, 2625.

The making of contracts for stores could not be transferred in any way or to any extent to the districts, 2642.

The present system of contracts causes the efficiency of the Service to suffer owing to delays (*Col. J. Stevens*), 495-8, 552-63, 593, 684-7, 708, 727-9, 734-6, 769.

The chief supplying departments should make their own contracts, 514, 549, 793.

Further contracts, sometimes at higher prices, are frequently given to contractors when they have already unfinished contracts in hand, 552-61, 698.

The fact that he is not invariably informed of the steps taken by the Director of Contracts is a source of much difficulty, 696.

Could carry out his portion of the contract work with a moderate addition to his staff, 658, 659, 712.

Both the Inspecting Officer and himself should be consulted in the allocation of contracts (*Col. Mulcahy*), 824-35, 908, 915, 942.

Reenders to the Director of Contracts periodically a statement of the whole condition of the contracts, 917-9.

Does not think the contracts could be arranged more quickly by allowing him to make purchases under the Director General of Ordnance, 837-40, 903-7.

A General Officer Commanding has power to sanction locally contracts up to 50*l.* for stores and 2,000*l.* for buildings; the limit of 50*l.* is too low, would make it 2,000*l.* in both cases (*Col. C. M. Watson*), 944-76, 1043-44, 1167, 1179-93.

Abroad the General Officer Commanding deals with all contracts, 951, 1207.

All contracts made locally are sent to the Inspector-General of Fortifications for review, 1039, 1102, 1207.

It would be a rare thing for the Director of Contracts to reject a contract selected by the Inspector-General of Fortifications, 1093, 1094.

Work should always be performed by contract where possible, 1111, 1112.

The Inspector-General of Fortifications can make contracts for ordinary stores up to 50*l.*, and for iron stores up to 100*l.*, 951, 1210.

Even if all contract work were transferred to his Branch, important contracts should still go to the Secretary of State, 1176.

CONTRACTS—*cont.*

Practically all contracts for fortification works go to the Director of Contracts for approval (*Col. G. Hildebrand*), 1269-70.

Contracts for local supplies are in the hands of General Officers; such contracts are subject to revision of Director of Contracts (*Lieut.-Gen. Sir C. M. Clarke*), 1393-1402, 1417-9.

Except in the case of operations outside the country, the Quartermaster-General makes practically no contracts for supplies, 1431-51.

The subsequent review of contracts for supplies by the Director of Contracts safeguards the public interests, 1481, 1525.

Would give Generals as much power as possible in the making of contracts, 1494-6, 1516, 1523.

The local system for meat and forage contracts is attended with good results, 1497-1505, 1519.

If the present system for contract work were altered it would be necessary to supply the Quartermaster-General, the Inspector-General of Fortifications, and the Director General of Ordnance, with a separate contract staff, 1427-9, 1478, 1527.

His Supply Branch at Woolwich would be quite competent to make its own contracts for supplies with the aid of a little clerical assistance, 1486.

Details of procedure by which clothing contracts were arranged at Pimlico (*Mr. Fleetwood Wilson*), 1550-8, 1510-2, 1614.

All clothing contracts are time contracts, 1576-9.

If the Supply Departments placed their own contracts there would be greater security that the stores would be available for the troops when wanted, 1632.

The duty of seeing a contract carried out should rest on the Receiving Department as soon as the contract is made (*Lord Haliburton*), 2123.

The present contract system is a valuable one (*Sir R. Knox*), 2266, 2267.

The War Office contract system has worked admirably for 45 years, and any large variation from it would be very unwise, 2335.

The War Office must have a contract policy, this would not exist if each department bought for itself, 2273.

Five orders were recently given to the trade for carriages; if they could have been placed in the Arsenal there would have been a saving of 411,000*l.* (*Sir G. Clarke*), 2489.

Contracts should be made by the Contract Store Branch of the Arsenal, with a Central Reviewing Department in London, 2493-2500.

Triennial contracts are made in all districts for all minor repairs and small new works up to 400*l.* (*Col. C. H. Bagot*), 2651.

The schedules of prices upon which triennial contracts are based are revised at headquarters, 2654-6, 2748-52.

Generals advertise for tenders upon the scheduled prices, and report upon the men tendering, 2658-66.

The Director of Contracts and the Inspector-General of Fortifications settle which triennial contracts are to be accepted; no difficulty about this as a rule, 2667-72, 2701-3.

Finds no difficulty or delay at headquarters in arranging the triennial contracts, 2673-6.

Has had no questions raised by Generals as to size of triennial contract districts, 2677-89.

As between his department, the Generals, and the Director of Contracts, the triennial system works perfectly well, 2705.

Would always refer to a General Officer Commanding before making any important changes in the schedules of prices on which triennial contracts are based, 2756-7, 2762.

The District Paymaster makes payments for small contracts for sums under 100*l.* (*Col. Drage*), 3527, 3548-53.

Before paying a claim under contracts, requires a certificate from the Army Service Corps officer that it is in accordance with the terms of the contract, 3641-4.

When things are wanted in a hurry applications are sometimes made that the contracts be given to certain firms (*Col. Bainbridge*), 4295, 4496.

In order to avoid delay accepts the ruling of the Director of Contracts; 2,646 contracts made for him in 1899-1900, 4284-7, 4323-8.

CONTRACTS—*cont.*

There is no general co-operation between his department and that of the Director of Contracts in the compilation of the list of contractors, 4305-22, 4532.

If making of contracts were left with the Factory, would issue tenders to only those firms whom he knew would supply, 4329-40, 4361, 4482-9.

If contracts were left with him it would require skilful and careful management to obviate charges of making monopolies, 4373-4.

If the tenders were left with him would get contracts placed in less than the present average time of one month, 4331, 4482-8.

If he says he wants a particular machine the Director of Contracts places the order with the firm he mentions (*Mr. Donaldson*), 4549, 4550, 4593.

In cases of urgency has purchased things direct, and then applied to the Director of Contracts for covering authority (*Mr. La Brooy*), 4627-9.

If the factories were allowed to purchase direct up to 250*l.*, instead of 25*l.*, there would be about a week saved in each case; it would dispense with about three-fourths of the present references to the Director of Contracts, 4675-80, 4728, 4729, 4740-50.

Contracts should not be given to unsatisfactory contractors, the Inspector-General of Fortifications should have the deciding voice in all works contracts (*Sir R. Harrison*), 5918-20.

Would give General Officers power to make contracts up to 4,000*l.* or 5,000*l.*, 5674-5720.

The Inspector-General of Fortifications should be at liberty to make his own contracts without any reference and without an intermediary or agent in the person of a Director of Contracts, 5863-73.

Generals should have a very large share in settling the composition of the list of approved contractors, and a freer hand in regard to contracts generally (*Maj.-Gen. Swaine*), 7650-74.

All contracts should be thrown open to the whole of the general public by advertisement (*Sir W. Butler*), 8300-2.

The G.O.C. should have a leading voice in the placing of contracts, 8305.

Would like to have the present limit of a General's power in settling contracts extended from 2,000*l.* to 5,000*l.*, 8292, 8441.

The final decision in regard to placing a contract ought to rest with the General (*Sir T. Fraser*), 8658-69, 8718-33.

Generals should have full power to deal with everything connected with contracts up to 2,000*l.*; they should also have the deciding voice in the list of approved contractors (*H.R.H. the Duke of Connaught*), 8776-82.

CONTRACTORS. (*See also "Middlemen."*)

When inspected, contractors give full information to representative of Secretary of State (*Mr. A. Major*), 25.

The selection of firms is, as a general rule, made by the Director of Contracts, 123-6, 145-52.

Has no difficulty in normal times in getting an adequate supply of contractors to tender, 154.

Thinks, as a general rule, that contractors do not consult with each other as to the prices to be put in, 175-80.

Before putting new firms on the list makes inquiries as to their financial position, &c., 2780-2.

Contractors have responded well to the demands of the War Office during the war, 2914.

Advantages would result from his being brought more into direct communication with the contractors (*Col. J. Stevens*), 739.

Contracts are given to firms who are unable to carry them out, 893-4, 798-809.

If he dealt with the contractors himself he could make them more punctual (*Col. F. E. Mulcahy*), 842, 869, 908.

At the end of every contract a completion report is rendered stating how a contractor has done his work (*Col. C. M. Watson*), 977-80, 1201.

Some contractors are reckless and some very careful in regard to time, 1015-7.

Thinks interviews between contractors and the Director of Contracts most undesirable (*Col. Hildebrand*), 1370.

CONTRACTORS—*cont.*

Every assistance was given at Pimlico to contractors (*Mr. Fleetwood Wilson*), 1559.

The system of "nursing" firms to enlarge the areas of supply presents considerable risk, 1557, 1612.

There is a tendency with contractors to take contracts beyond their powers, 1568-70, 1580, 1633-9.

Believes that during the recent period of strain most of the contractors have done their best to supply everything that has been wanted by the State (*Sir R. Knox*), 2428.

Has constantly had complaints in Ireland, but not in England, through contractors not having competent agents on the spot (*Col. C. H. Bagot*), 2690-700.

Regulations should be issued laying it down as the duty of heads of departments to make inquiries as to the competence of firms before their tenders are accepted (*Sir G. Clarke*), 2464-7.

Protests as a rule against orders being given to firms he knows nothing about (*Col. Bainbridge*), 4342-4.

CORRESPONDENCE:

It would save a great deal of time if all correspondence from contractors on building works were to go direct to the Commanding Royal Engineer (*Col. C. M. Watson*), 1064, 1141-7, 1211.

The whole of the present superfluous correspondence could be done away with if the contract arrangements were kept in the Branch which has to carry out the work (*Col. G. Hildebrand*), 1285-7.

The Drafts of all important letters should be submitted to the Chief Clerk and Registrar for approval and amendment if necessary (*Mr. Fleetwood Wilson*), 4796-814, 4798.

There is no possibility of minimising the correspondence with the Treasury on the subject of pensions (*Mr. Chalmers*), 3061-3, 3267-9.

Local audit would do away with much correspondence in small matters (*Mr. Marzials*), 3376, 3377.

There is not a needless amount of reference to the War Office by Paymasters (*Colonel Drage*), 3670-3.

If local audit were introduced, correspondence with headquarters would be increased (*Mr. Wight*), 4024-9.

There is at the factories a large amount of correspondence over trifling things (*Mr. La Brooy*), 9117-27.

Has frequently to deal with different branches of the War Office on the same question, 9128.

Correspondence between the departments of the War Office is more diffuse than it need be (*Sir R. Harrison*), 5882-93, 5927, 5931-35, 5936-55.

All letters from the Military Department should go out in the name of the Commander-in-Chief (*Sir C. Grove*), 6936-43.

There is too much correspondence at present; a large part of this is in reference to the interpretation of regulations, 6993-7.

The questions that force correspondence on the War Office will obtain nearly as much with the Army Corps as they do now with the districts (*Sir F. Maurice*), 6573, 7354, 7361, 7364-6, 7380, 7540.

The effect of the recommendations of the Decentralisation Committee of 1898 has been to reduce correspondence between the War Office and the districts to about one-third of what it was, 7400-1.

There is delay in getting through matters which must be referred to the War Office, 7540-1, 7553, 7560-2.

The source of congested correspondence is to be attributed to the principle of continual check and revision to avoid insignificant mistakes, 7563-7.

The number of returns sent to the War Office from the districts has lately diminished: there is room for further reduction (*Maj.-Gen. Swaine*), 7752-63.

Has no difficulty in getting replies from the War Office, 7848.

CORRESPONDENCE—cont.

The reports and returns now rendered by the districts to the War Office are too voluminous; they are unreliable (*Sir W. Butler*), 8259-81, 8390, 8442-5.

In order to lessen correspondence would give Generals larger powers in regard to forage, &c. (*Sir T. Fraser*), 8593-653, 8698.

Letters from the War Office should be sent out in triplicate (*H.R.H. The Duke of Connaught*), 8783-8.

There is not much delay in the correspondence with headquarters, 8915-23.

DECENTRALISATION. (*See also Army Corps, Contracts, Local Audit, &c.*):

Would only decentralise contracts for small things (*Sir H. Brackenbury*), 381-6.

Even if heads of departments had the right of consultation with the Director of Contracts, decentralisation would still be necessary, 2557-9, 2621, 2622.

Directly decentralisation takes place there will be varieties of rulings (*Mr. Marriale*), 3852.

In order to relieve pressure upon the War Office there should be more independent heads with power to settle questions as they arise (*Sir F. Maurice*), 7454, 7541.

At present has all the power which could be usefully exercised by himself and his officers in the district, 7457-59.

The only matter in regard to which decentralisation can actually take place is in the expenditure of money (*Sir R. Buller*), 8086, 8148.

Details showing how far various suggestions made to the Decentralisation Committee of 1898 could be carried out (*Sir W. Butler*), 8508-15.

In order to perfect decentralisation would give a General entire power and responsibility within his district, except in regard to largely important questions (*Sir T. Fraser*), 8698-708, 8712, 8734-40.

Decentralisation on broader and more direct lines than those recommended by the Decentralisation Committee is required (*H.R.H. The Duke of Connaught*), 8980, 8993-4.

Details of various matters now dealt with by the branch of the Adjutant-General's Department known as A.G. 1, which might be left to the districts to settle (*Col. Robb*), 9385-453, 9592-5.

If any big scheme of decentralisation is adopted, uniformity cannot be expected, 9602-5.

It would not be possible to decentralise the work of embarkation and conveyance of stores and place it under the Generals (*Lieut.-Col. Cowans*), 9783-7.

DELAYS. (Contracts):

When contracts are delayed, inspectors are sent to ascertain the progress made (*Mr. Major*), 18-24, 264, 268.

Contractors usually execute their orders in the time promised, 29-33, 63-8.

Delays in delivery are reported by the purchasing department, 61, 1730.

Has had no complaints of delay between the receipt of requisitions and the placing of contracts, 226, 276.

Details referring to the alleged delay in the provision of tents, 2798-09.

The question of delays, and the impossibility of getting stores, is mixed up with the question of keeping proper reserves, 2798, 2961.

The delay in procuring the stretcher slings was defensible, 2885-905.

There is scarcely anything supplied that is not behind time (*Sir H. Brackenbury*), 401.

Has known of complaints of delay between date of requisition and date of placing contract, 416.

At present contractors tender recklessly as to dates, because there are no penalty clauses worth speaking of, 431, 435.

A great many complaints of delays in delivery have been sent by his department to the Director of Contracts, 455.

There are always long delays in reference to contracts, even in normal times, they are part of the system (*Col. J. Stevens*), 500, 506-17, 564, 565, 569-73, 588, 619-24.

DELAYS—cont.

Has had no glaring instances of delays in getting tenders out (*Col. F. E. Mulcahy*), 520-3.

The contractors are never up to time, 841, 854-60, 891.

Does not think there is any delay in the Contract Branch in dealing with tenders (*Col. C. M. Watson*), 1000, 1001, 1199.

There are complaints about delays in the completion of works, 1014, 1256.

The distance between the Inspector-General of Fortifications and the Contracts Branch leads to delay (*Col. G. Hildebrand*), 1378, 1379.

His department has no complaint to make of the work now done by the Director of Contracts as being an unnecessary cause of delay (*Sir C. M. Clarke*), 1426, 1435, 1436.

It would tend to lessen delays if the Inspector-General of Fortifications were in the same building as the Adjutant-General and the Quartermaster-General, 6846-50.

Used to send very strong protests if contractors were not keeping up to time (*Mr. Fleetwood Wilson*), 1566.

His complaints of contractors being in arrear with their deliveries were incessant, 1575.

There are delays between the sending in of requisitions and the placing of contracts, 1675-9.

If, when at Pimlico, he could have placed his own contracts, it would have saved a great deal of time, 1556, 1623-32.

The only way in which stores can be got satisfactorily, is to have as little delay as possible between the man who is answerable for the provision of stores and the contractors, 1680-8.

The delays which have occurred are not due to faults in the contract system (*Sir B. Knox*), 2336, 2366, 2419.

Any using department suffering from delays should report to the Director of Contracts, and look to him to set the matter right, 2386.

Cases of delay at the Arsenal are of almost daily occurrence in every branch of material supplied (*Sir G. Clarke*), 2346.

Details of three cases in which excessive delays occurred, 2437-47, 2451-60, 2471-9.

The constant communication by Adjutant-General, Inspector-General of Fortifications, and Quartermaster-General leads to delay in business (*Col. C. H. Bagot*), 6636-41.

There is great delay in the delivery of stores (*Col. Bainbridge*), 4347-56.

If the Director of Contracts had on his list only such firms as the Factories recommended, delays would be reduced, 4361.

If he took over the making of contracts it would in many cases quicken matters (*Mr. Donaldson*), 4594-9.

In one year alone as many as 1,500 telegrams were sent to contractors urging on deliveries (*Mr. La Brcy*), 4681-3.

DIRECTOR OF CONTRACTS, BRANCH OF:

The business of his Department is to supply goods on demands made by the various districts and departments (*Mr. A. Major*), 14, 95.

It is proposed to strengthen his Branch by the addition of a staff of experts, 38-43, 338.

It is their duty to know the sources of supply; that duty is better discharged by a central department, 77, 73, 85.

Buys what they are requested to buy; they do not decide upon the necessity for purchase, 129, 130, 240.

As a rule they buy very cheaply, 181, 344.

Their responsibility is at an end directly a contract is made, 203, 272, 1729, 1730.

They never deal with technical questions, though they frequently advise on technical matters, 296.

They buy for other Departments besides the War Office, 357.

The duties of the Director of Contracts are arranged in a general statement of procedure founded upon the Orders in Council, 2789, 3002.

In all the cases cited by the Principal Ordnance Officer the Contracts Branch could have done better than he did, 2794, 2857-84, 2850-67, 2978-80.

DIRECTOR OF CONTRACTS, BRANCH OF—*cont.*

The Contracts Branch never objects to refer contracts to the Branches concerned, it is the practice to do so, 2923, 2943-5, 2946, 2991-06, 3012-23.

One of the most important functions of the Director of Contracts is securing fair competition, 2975.

The Contracts Branch should be broken up, and the allocation of Contracts rest with the Director-General of Ordnance (*Sir H. Brackenbury*), 370, 373, 2549, 2551-4, 2573, 2574, 2613.

The duty of the Director of Contracts is to supply in accordance with requisitions made, 410.

As an alternative to breaking up the Contracts Branch, the Director of Contracts might have Assistant Directors at Woolwich and Pimlico to work in concert with the officers serving under the Director-General of Ordnance, the contracts for ammunition and weapons being still more at headquarters, 2502, 2504, 2560-9, 2574-97, 2621, 2622.

Any matters which the Assistant Directors of Contracts could not settle should be referred to head-quarters, 2503, 2507, 2512, 2623, 2626-37.

Assistant Directors to send reports weekly to head-quarters, 2508.

Assistant Directors to have power to arrange with local officers which tenders should be accepted, and in times of emergency to arrange to purchase outside the system of tender, 2519, 2522-42.

The present system does not work satisfactorily, even in normal times, 2544-7.

The friction between his Department and the Contract Branch has been mostly in reference to stores, 2551-3, 2609-11.

The Director of Contracts should be responsible for stores up to time of delivery, and should not disclaim responsibility directly a contract is made (*Col. J. Steevens*), 651, 652.

It is a disadvantage that the Contracts Branch has no technical knowledge, 688, 741-61.

The Director of Contracts does not recognise the necessity of departing from routine, 772-6.

Would be satisfied if the Contract Department, so far as it deals with providing general stores, were placed under the Director-General of Ordnance, 654-76, 764-71.

Director of Contracts does not attribute sufficient importance to time in the allocation of contracts; he places orders with firms who are already overloaded (*Col. F. L. Mulcahy*), 832, 914.

Director of Contracts objects to his asking contractors what their difficulties are while contracts are being carried out, 861, 870, 895.

The Contracts Branch is not sufficiently in touch with the manufacturers, 887, 931.

Would prefer a system under which his department became the purchaser of all stores he required; it would be an advantage to the State, 901, 902, 932, 937, 938.

For want of technical knowledge the Director of Contracts has to refer tenders to Inspector-General of Fortifications (*Col. C. M. Watson*), 957-73, 1201.

No responsibility rests upon the Director of Contracts either for execution of work or for finance, 1149, 1150, 1153, 1201-4.

The intervention of the Director of Contracts does away partially with the individual responsibility of the Inspector-General of Fortifications, 1217-29, 1251.

The Director of Contracts' functions are, to a certain extent, only those of a Post Office, 1235, 1236, 1257, 1258.

It would make little difference in the Inspector-General of Fortifications Branch if all their contracts work were transferred from the Director of Contracts, 1061-74, 1113, 1114.

His Branch and the General Officer Commanding, have more interest in economy than the Director of Contracts, 1080-2, 1237.

Is dissatisfied with the present system, which does not tend to efficiency, and under which contracts are sometimes placed by the Director of Contracts with men against whom both his branch and the Generals have strong objections (*Col. G. Hildebrand*), 1274-82, 1284, 1290-1305, 1324-49, 1364, 1365.

The Director of Contracts allows tenders to be invited from bad contractors, and when they come in he accepts them, 1341, 1342.

DIRECTOR OF CONTRACTS, BRANCH OF—*cont.*

Good work has been done abroad where the Director of Contracts has nothing to do with contractors, 1364.

Has no complaints to make of the present system under which the contracts work is carried out (*Lieut.-Gen. Sir C. M. Clarke*), 1440, 1441, 1489-90.

In a purely contracts department there is a tendency to think of nothing but the contracts side of business (*Mr. Fleetwood Wilson*), 1571-4.

It would be better to break up the Contracts Department and let the various branches make their own contracts, 1590-1603, 1613, 1615, 1654-6, 1653, 1670-4.

If the Contracts Branch is broken up its parliamentary work should be transferred to the Central Branch, 4754-8.

Such a set of "Instructions" as those issued for the Director of Navy Contracts would be of considerable assistance in the War Department (*Mr. Perry*), 1962-9, 2038.

The system pursued at the War Office differs from that followed at the Admiralty, 2001-17.

The Contracts Branch is not a "Post Office"; it looks into all questions with a view to efficiency and economy, 2031-40, 2062, 2063.

There is no friction between the Contracts Branch and other departments, though there may be between individuals, 2026, 2027.

There is no more difficulty in meeting the orders of the Director-General of Ordnance or the Inspector-General of Fortifications or the Ordnance Factories, than there is in meeting the orders of the Quartermaster-General, 2030-1.

The Director of Army Contracts deals with wider classes of stores than those dealt with by the Director of Navy Contracts, 2033-6.

Always confers with the requisitioning department as to which tenders shall be accepted, unless by consent the reference is dispensed with, 1985-96.

While Director of Supplies and Transport never had occasion to be dissatisfied with the department of the Director of Contracts (*Lord Haliburton*), 2069.

It is necessary to have a Contracts Branch as the Officer dealing with the stores should not be the sole person to decide where they should be got, 2086, 2091, 2130-5, 2170, 2182, 2187.

Found the office of Director of Contracts a very valuable assistance, 2093-5, 2130, 2177.

The Director of Contracts has an incentive to economy as well as the heads of departments, 2106-10, 2131, 2132, 2202-5.

Never had any friction with the Director of Contracts; contested cases were settled by conference, 2111-5, 2142-6.

The great evil of not having a Contracts Branch would be that a number of people would be buying on behalf of the Government and so competing with each other, 2158, 2187.

The Director of Contracts would satisfy himself when demands of an extraordinary nature were put forward that money had been provided to meet them (*Sir R. Knox*), 2232-42, 2247, 2376-8.

The position of Director of Contracts is one which does secure both efficiency and economy, 2243, 2244, 2361-73, 2398-404.

The Contracts Branch is not a superfluity, 2262, 2263.

Whatever friction exists between the Contracts Branch and other departments is generally a mere personal matter, 2265-6.

Has always understood that the Director of Contracts consulted with the departments concerned when contracts of any dimensions were put forward, 2268-73, 2284, 2425-7.

The Director of Contracts, as a matter of principle, requires just as much check as any other department, 2286.

The demanding departments should be the watchers of the Director of Contracts, and if his system is not producing the best results economically they should report, 2382, 2383.

It would be a bad thing to take guns, ammunition, and works away from the Director of Contracts, 2289-95.

Attaching a Contract Staff to each department would not work well, 2304-8, 2371, 2433.

DIRECTOR OF CONTRACTS, BRANCH OF—*cont.*

None of the things now purchased by the Director of Contracts would be better purchased if obtained by the Supply Departments, 2311-17.

A mere central reviewing department would be likely to drop into desuetude, 2241-2, 2387.

To add his contracts work to the Director-General of Ordnance would be further concentration of work on an officer who is already very heavily loaded, 2412-6.

There would be a probability of corruption creeping in if the Director of Contracts were eliminated, 2422, 2431-4.

A set of instructions similar to those in use in the Admiralty would be valuable, 2283, 2430.

All communications between the Superintendents of Factories and the Director of Contracts have to go through the Stores Department (*Sir G. Clarke*), 2436, 2448-50.

Sees no advantage arising from the intervention of the Director of Contracts in the contracts in the building trade (*Col. C. H. Bagot*), 2722-35.

As a commercial engineer sees no advantage arising out of the intervention of the Director of Contracts in the purchase of machinery (*Mr. Donaldson*), 4548-9, 4591-2.

There is no general co-operation between his department and that of the Director of Contracts in the compilation of the list of contractors (*Col. Bainbridge*), 4305-22, 4532-3.

Unless considerable improvements can be introduced into the Contracts Branch, some of their work should be deputed to Generals of districts (*Maj.-Gen. Swaine*), 7635-49.

The Contracts Branch suffers from being too much detached from the Army; it is not particular enough about the contractors who are put on the list (*Sir R. Buller*), 8014-9, 8133-6.

Large contracts, anything over 2,000*l.*, are better left in the hands of a Central Office, 8018-9, 8137-47.

The Director of Contracts should not force upon a General Officer Commanding a contractor to whom the General objects, 8163, 8164.

Is strongly in favour of the retention of an independent Contracts Branch, 8012-4, 8019.

DRAFTS :

The preparation of drafts should be put out to the districts (*Sir F. Maurice*), 7518-20.

If command in the districts concentrated in the hands of Army Corps Commanders, there would be no difficulty in supplying the drafts necessary for foreign service (*Maj.-Gen. Swaine*), 7962-75.

The provision of drafts could not be decentralised, they must be arranged from headquarters (*Sir W. Buller*), 8520-6.

If all the necessary information were centred in the home battalion, the drafts could be arranged in the districts (*H.R.H. the Duke of Connaught*), 8873-99.

It is essential to retain control of the drafts at headquarters (*Col. Robb*), 9363-73, 9384, 2454-63, 9550-68.

The work in connection with the drafts could not be more decentralised than it is at present (*Lieut.-Col. Cowans*), 9819-32.

ESTIMATES :

There must be a central body in order to bring the estimates into harmony, and to centralise and focus the amounts (*Mr. Marziale*), 7295-8.

HOUSE OF COMMONS :

The red tape in the regulations arose from the War Office being too much harried by questions in the House of Commons (*Mr. Flynn*), 5019, 5020.

The House of Commons questions are largely responsible for the degree of centralisation that prevails (*Sir E. Wood*), 5590-92, 5614-21.

Owing to the intervention of the House of Commons in matters of executive Military detail, there is a tendency for Military matters to pass from Military Officers to a Civilian exposed to the political pressure of parties (*Sir C. Grove*), 6920-35.

INSPECTION :

The system of inspection, as applied to goods delivered, is not too severe (*Mr. A. Major*), 74-6.

It is the duty of the Receiving Department to see that the contracts are executed according to terms, 197-212, 217.

Not expedient or necessary to have two inspections of goods, 212.

Inspection should not rest with the buying department, 216, 217, 1733.

Contractor's premises are not to be inspected without the concurrence of the Contract Branch, 267, 1700, 1733-5, 1744-6.

The inspection of tent mallets is, generally speaking, fairly severe, 2317.

Had the tent pins bought by the General Officers Commanding been sent to Woolwich, they would have been rejected by the Inspection Department, 2825.

To find out sources of supply and to see to the execution of orders, travelling inspectors should be appointed (*Sir H. Brackenbury*), 367, 368, 457.

His Inspection Department inspects stores on delivery, it has nothing to do with inspection of work, except in certain cases of manufacture, 444-8, 474.

His department is the best to visit works and see whether firms should be allowed to tender, 2606-15.

Travelling inspectors should be appointed under the Director of Contracts (*Col. F. E. Mulcahy*), 873-86.

Thinks he should have the power of sending officials to see how orders are proceeding, 893, 894, 933, 936.

In cases of local supply, works and materials are carefully inspected by Royal Engineer Officers (*Col. O. M. Watson*), 951.

It is part of the duty of the Central Office to inspect stores in the process of manufacture, 1057, 1058.

Local inspections from headquarters are carried out as far as possible, 6194-5.

Stores purchased locally by Generals are inspected by Army Service Corps Officers (*Lieut.-Gen. Sir C. M. Clarke*), 1460.

Constantly represented that travelling inspectors should be appointed to watch and report upon the progress of contracts (*Mr. Fleetwood Wilson*), 1561-5.

Being asked to relax his standard of inspection in favour of contractors was a very common source of difficulty, 1640, 1641.

The functions of the Director of Contracts afford no protection against passing bad stuff, the responsibility lies mainly in inspection, 1659-65.

Inspections should not be carried out except at the instance of the Contracts Branch (*Mr. Perry*), 2044-5.

Visiting manufacturers is a recognised system in the Contracts Branch, 1997, 2004-8, 2044-5.

His local officers, when necessary, inspected and reported on contracts in progress (*Lord Haldiburton*), 2072-7, 2197-200.

Inspectors should be drawn from the department which is being served by the stores in question, 2078-80, 2124.

Visiting the works of contractors was a recognised part of the duty of the Director of Contracts; this is important, 2096-105, 2125, 2126.

The Director of Contracts should have the power of inspecting the various factories, and ascertaining the ability of contractors to execute contracts (*Sir R. Knox*), 2260.

The duty of inspections should be a joint one between the Contracts Branch and the Supply Departments, 2274-82, 2321, 2322.

Would permit the Supply Departments to inspect work in progress, but the Contracts Branch should be informed of such action, 2322, 2331-3.

The demanding department is responsible for seeing that goods when delivered are in accordance with the specification, 2361-2, 2382-3.

In normal times the Contracts Branch and the Director-General of Ordnance and Quartermaster-General can produce the men necessary to do all that is required in the way of inspection, 2389-91.

Had he the power, could send men to inspect works (*Sir G. Clarke*), 2443-7, 2456-63.

INSPECTION—cont.

Local professional inspection of works in districts by independent surveyors would be a good thing (*Mr. Marzials*), 7299-312, 7335-6.
 Visits works of contractors to a great extent; Director of Contracts has asked to be informed of such visits (*Col. Bainbridge*), 4297-304.
 Pays visits of inspection in order to keep in touch with what is going on throughout the mechanical trades of the country (*Mr. Donaldson*), 4562-7.
 In order to avoid errors in quantities, there must be local inspection; would send inspectors to examine buildings from time to time (*Mr. Bull*), 6045-51, 6084.
 It is necessary that officers who have to decide questions should be able to go down and see for themselves what is going on in the different districts (*Sir F. Maurice*), 7421-4, 7461-6, 7502-3, 7554-9.

LANDS AND LAND AGENTS:

In regard to the acquisition of rifle ranges, the system of employing local land agents might with advantage be extended (*Col. C. M. Watson*), 6553-6570.
 The purchase and sale of lands should be carried out at headquarters (*Sir R. Harrison*), 5837-64.
 The present system of arranging purchases of land at the War Office is the best (*Maj.-Gen. Sir T. Fraser*), 8695-7.
 There should be a qualified War Department land agent in Ireland (*H.R.H. the Duke of Connaught*), 8755.
 Would give Generals greater powers in regard to the purchase of land, 8754-64.

LOANS:

Details of the principles upon which loan works are carried out (*Col. C. M. Watson*), 6172-93.
 Has no difficulty in ascertaining daily how the expenditure on loans stands, 6358-66.
 Has had no complaints of their work under the Barrack Loans, 6452-8.
 It would be more convenient to carry out large new works under loans, leaving maintenance to the annual estimates (*Sir R. Harrison*), 5780, 5783, 5925, 5926.
 Continuation services absorb nearly the whole of the annual estimates; the only way to arrive at a satisfactory method is to transfer all the bigger services to loans (*Col. Skinner*), 7172.

LOCAL AUDIT:

The Chief Paymaster ought to be the representative of the Accountant-General in the district (*Sir H. Brackenbury*), 5332.
 It would be an extravagant plan to provide a local audit (*Sir R. Knox*), 4055-62, 4072-4, 4138.
 Local audit would give rise to variety of treatment in the interpretation of the regulations, 4063-5, 4179, 4182.
 There would be difficulty in making a very interchangeable staff, men would not so readily enter as civil servants, 4066-71, 4180.
 An expansion of the War Office, or a local audit office, to meet the extraordinary circumstances of a war, would be an extremely difficult thing, 4080-2, 4182-5.
 If local audit were established, the whole of the examination of the accounts should be done locally, 4083.
 A system of local audit would lessen the knowledge and experience of the Accountant-General in the working of the Regulations, 4123-5.
 Local audit could not be entirely relied upon, there would have to be a test audit at the War Office, 4131-7, 4164-70.
 Centralisation of all audit at the War Office would be better than local audit, 4139, 4184.
 It would be necessary to have highly-trained and highly-paid men in charge of the decentralised audit, 4195.
 If the Paymaster were a mere cashier, it would be undesirable that payments should be made without audit (*Mr. Marzials*), 3309, 3393-407.
 In time a local audit office would lose touch of the traditions of the War Office and come under the influence of the General Officer Commanding, 3323.

LOCAL AUDIT—cont.

Outside a radius of 20 miles the personal influence of a local auditor would be nil, 3325, 3369-72.
 If a local audit office were transferred in time of war, it would be necessary to recreate another office in its place, 3325-9.
 The final audit would rest with the local War Office, and not with the Paymaster, 3356.
 Does not see why he should not accept the audit of his subordinates decentralised, as well as of those in the War Office, 3357-61, 3367, 3368.
 For the purpose of supervising the local War Offices it would be necessary to have a small staff to pay surprise visits, 3365-7.
 The rules for local audit would have to be more stringent than those for audit at headquarters, 3374.
 If a local audit office is established, the head of it must be a man of some standing, 3390, 3778-9, 3784.
 Local audit would mean in general an increased and a more highly-paid and superior kind of staff to that now employed, 3391, 3778, 3779, 3784.
 The juniors, or boys, in a local audit office could not be taken for a foreign expedition, 3408-10.
 If local audit were established, a complete reorganisation of the Accountant-General's Branch would be imperative, 3439.
 If local audit were made in full, and taken as final, the test audit at the War Office could be dispensed with, 3443, 3444.
 If the full examination of claims is done only after payment, the work can be better and more economically done at headquarters, 3770, 3771, 3821-5, 3848, 3850, 3851.
 If the accounts were taken away an additional source of knowledge would be taken away from headquarters, 3780-4, 3789.
 Local audit would be a very wasteful system (*Mr. Wight*), 4001-19, 4023-9.
 If local audit were introduced there would be difficulty in securing uniformity in the interpretation of the present difficult and complicated regulations, 4024-9.
 Sees no reason why the whole of the audit of the Ordnance Factories should not be done by a Branch of the War Office at Woolwich (*Mr. La Brooy*), 4699, 4716.
 If the local auditor had power to deal with questions finally it would very much simplify correspondence (*Sir F. Maurice*), 7397-9.
 If it is merely a question of interpreting financial regulations as they exist, a Paymaster in the district is adequate, but if it is a question of spending money irrespective of regulations, then a financial adviser is essential, 7460, 7579, 7580.
 There would be no difficulty in local audit; it would make the district more self-contained (*Maj.-Gen. Swaine*), 7735-6.
 Local audit would save trouble and correspondence with the War Office, 7739-46.
 If a local auditor were placed at every Army headquarters, the English system would approximate closely to the German system, 7764-75, 7872-85.
 Would have a local auditor; he should be a War Office official of high class (*Sir R. Buller*), 7990-8011.
 It would be an improvement to have local audit, the District Paymaster should do it (*Sir W. Buller*), 8342-54, 8378, 8457-60.
 It would be a very great advantage to have a local audit (*Sir T. Fraser*), 8533-9.
 Is in favour of local audit; the staff should be interchangeable with the War Office (*H.R.H. the Duke of Connaught*), 8844-6, 8958-60.

LOSSES:

Treasury has no objection to extending powers of War Office and of Generals for writing off losses (*Mr. Chalmers*), 3127-32.
 Would not object to raising the power of Generals for writing off cash (*Mr. Marzials*), 3457.
 The limit within which a General has power to write off overpayments should be extended from 1l. to 10l. (*Sir T. Fraser*), 8578-80.
 Generals should have power to write off up to the limit of 5l. for cash and 50l. for stores (*H.R.H. the Duke of Connaught*), 8839-43.

MIDDLEMEN :

Steps are always taken to find out whether tenders come from middlemen (*Mr. A. Major*), 1711.
Contracts have been given to middlemen (*Col. J. Stevens*), 695.

MILITARY EDUCATION :

The division of the education of Army officers under the Military Secretary, and that of men under the Adjutant-General, is not a good arrangement (*Col. Delavoye*), 9663-6, 9675, 9707, 9708, 9776.

Candidates coming into the Army through the Militia are badly up in the subjects of general education, 9737.

The present arrangement of business in his Branch so far as the training of officers is concerned, is quite satisfactory, 9731-2, 9741-3, 9761-2.

Owing to lack of accommodation in the Military Colleges will have, in future, to take more officers from the Militia than ought to be the case, 9763-8.

The educational standard of the cadets who pass into the colleges is very good indeed, 9769-72.

The course at Sandhurst should be extended to 18 months, 9775.

MILITARY STAFF, ESTABLISHMENTS, AND DEPARTMENTS :

The continuity of his Branch does not suffer from the fact that officers are continually changed after five years (*Sir H. Brackenbury*), 5301-10.

Military clerks, owing to their military knowledge, are superior to civil clerks for the work of his Branch, 5311-6, 5320-3.

Military business should be entirely managed by Military men, but in each Spending Department there should be a small civilian staff to do the account work, 5325-30, 5357, 5358.

Anticipates no difficulty in getting what Military clerks he may require, 5367, 5368.

There is practically no delay arising out of the correspondence between the Quartermaster-General and the Inspector-General of Fortifications, but it would be an advantage if the functions of each were more clearly defined (*Col. C. M. Watson*), 6245-310, 6508-21, 6538-40, 6435-46, 6547-52.

It would not be an advantage to bring the Supply and Works Departments under one head (*Lieut.-Gen. Sir C. M. Clarke*), 6851.

Would not be in favour of making the Military clerk interchangeable between the War Office and the districts, 6838, 6889.

The constitution of the Military Branches should be entirely Military (*Mr. Fleetwood Wilson*), 4875-86, 4891, 4892, 4936-40.

A mixed staff is a wrong system, it works badly, 4887-9.

If the Military replaced the civilian element, a limit should be put to the extent to which officers should be taken away, 4895-8.

The work of the Director-General of Ordnance's Branch has gone very much better since the civil was replaced by the Military element, 4900, 4901.

The better plan would be to have no higher division clerks in the Military Branches, there should be an increase in the number of Military officers (*Sir R. Knox*), 5136-40, 5182-6, 5190-8.

It would be extremely difficult to obtain a sufficient number of Military clerks to staff completely the Military Branches, 5136.

A mixture of classes is bad, 5141-2.

To have an interchange of Military clerks between the districts and the headquarters would be very risky, 5153, 5180-1.

The Military clerks at the War Office are always the best of their class, 5154-60.

The Military clerk is always slow, 5161, 5162, 5205.

Military clerks get on best with officers, 5161-8.

Military clerks, as regards quality and capacity, are not to be compared with Second Division clerks, 5202-12.

It is not desirable that clerks of the Higher Division should serve in the Military Departments (*Mr. Marriotts*), 7266.

Military clerks are not quite as good as Second Division clerks, 7268.

**MILITARY STAFF, ESTABLISHMENTS, AND DEPARTMENTS—
cont.**

Military clerks employed at the War Office should be made interchangeable with the districts, 7271.

After 12 months of Pay Office work a Military clerk ought to be a very good clerk (*Col. Drage*), 3745.

A closer touch between the Military and the Finance Departments is essential to smooth and economical working (*Sir Evelyn Wood*), 5582.

A great deal of work that is now done in the Adjutant-General's Department could be transferred to the Military Districts, 5590, 5593, 5613. Officers should have an opportunity in peace of gaining experience in the financial powers they are called upon to exercise in war, 5497-8, 5557-84.

Power should be given to the Adjutant-General to settle matters of minor importance without reference to the Finance Department, 5562-4.

The Adjutant-General's Department should be in a position to frame estimates, and financially consider the cost of the present and proposed personnel of the Army, 5624, 5625.

In the Military division Higher Division clerks should be replaced by Staff Officers retaining the Second Division clerks in their present places; Military clerks being used for returns, &c., and other non-confidential matters, 5506-17, 5559.

Both the officers and the Military clerks should be interchangeable between the War Office and the districts, 5515.

There is no difficulty in getting good staff clerks from the Army good enough for the duties they should perform in the War Office, 5560.

The Inspector-General of Fortifications should be allowed to get what staff he requires, and settle their conditions of service (*Sir B. Harrison*), 5768-72.

Is in favour of the association of civil clerks with officers at headquarters in order to maintain continuity, 5820-36.

The direct Military adviser of the Secretary of State should be the Commander-in-Chief (*Sir C. Grove*), 6998-7003.

The Commander-in-Chief should have the entire Military responsibility for the efficiency of the Army, 7028-36.

There is, on the Military side of the War Office, a want of some officer or central office to see that all questions have been properly discussed before being submitted to the Commander-in-Chief, 7035, 7036.

The separation of Finance from the Military Department does harm, 6866-8, 6955-63.

Would place on the Commander-in-Chief the responsibility of keeping a general watch over Military expenditure, 6869-81, 6972-5.

The Accountant-General's Department, except the Audit, should be transferred to the Military side of the War Office; it would be immaterial whether the staff was civil or military, 6901-10, 7040-50, 7062.

The dissociation of Military action from account keeping and finance, has tended to make officers think very little of the money side of questions, 6866, 7037, 7051, 7052.

There is a steady tendency at the War Office for matters connected with the Military direction of the Army to pass from the Military officers to a civilian exposed to the political pressure of parties, 6920-35.

Would approve of Military officers in the place of Higher Division clerks, and Military clerks in the place of Second Division clerks; would have them all interchangeable between the War Office and the districts, 6944-54.

There is a certain amount of duplication in the functions of Quartermaster-General and Inspector-General of Fortifications; this could be avoided if both Branches were under the same roof (*Col. Skinner*), 7153-5, 7174.

In a Branch such as that of the Quartermaster-General it is better to have only civil clerks; does not require any of the Higher Division; sees no objection to a certain admixture of civil and military, but the Military clerks should be interchangeable with the districts, 7196-203.

MILITARY STAFF, ESTABLISHMENTS, AND DEPARTMENTS—
cont.

The abolition of the office of Deputy Adjutant-General, Royal Artillery, has, in practice, proved a disastrous failure (*Sir F. Maurice*), 7505, 7506.

If decentralisation is to be effected in the War Office, it will be necessary either to reduce the powers of the Adjutant-General or abolish his office; he should be replaced by an Inspector-General for each arm of the Service (*Maj.-Gen. Swaine*), 7587-603, 7584-98, 7905-19, 7934-41.

So long as the powers of the Adjutant-General are undefined, he is able unduly to extend their practical application, 7604-34, 7888-90, 7934-7.

Unless considerable improvements can be introduced into the Inspector-General of Fortifications' Branch, some of their work should be deputed to Generals of districts, 7635-49.

Would like to see the Military government of the War Office organised exactly like an army in the field (*Sir E. Buller*), 8088-109, 8167.

The great blot on the Military administration of the Army has been that there has never been any attempt to place financial responsibility on the Commander-in-Chief, and through him on the Generals Commanding, 7985, 8165-7.

Does not see how any effective decentralisation of work can be arrived at without a fundamental reorganisation of the forces; the field army ought always to be distinct from the garrison army, and there ought to be a delegation of authority and responsibility right through the fabric of the Army (*Sir W. Butler*), 8260, 8390-400, 8412-35, 8446-70, 8493-7.

It is a serious matter that the time of the staff in the district is largely taken up with all sorts of formal and routine matters (*Sir T. Fraser*), 8713-4.

The General ought to have the freest possible hand in the expenditure in his district, 8735-40.

The greatest possible powers should be given to Generals in their own commands (*H.R.H. the Duke of Connaught*), 8862-72.

Approved of the abolition of the office of Deputy Adjutant-General, Royal Artillery, 8900-4.

Is strongly in favour of the appointment of Inspectors-General of Cavalry, Infantry, and Artillery, 8905-14.

Would prefer to have the duties of Staff Officers divided on the German system, 8982-7, 9010, 9011.

Responsibility should be driven home right through an officer's career, 8961-8, 8968-92.

His Branch of the Adjutant-General's department, known as A.G. 1, is very much understaffed; it is at present hopelessly disorganised; it should be divided into sections (*Col. Kobb*), 9381-3, 9430-1, 9464-505, 9518-49, 9575, 9580-85.

Would prefer to have an officer in charge of his Branch rather than a Civilian Higher Division Clerk, 9377-80, 9410, 9507-8.

Military clerks are not generally satisfactory, 9693-701.

A capable civilian staff clerk would be ample at the head of his Branch, the work of which is better done by Civil than it would be by Military clerks (*Lieut.-Col. Cowans*), 9806-12, 9815, 9866-70, 9877-9.

NAVAL CONTRACTS:

The Director of Navy Contracts is responsible for the purchase of all stores, supplies, and machinery of the authorised patterns as articles of store required for the use of the Naval and Marine forces and establishments, and for the conclusion of all contracts in connection therewith (excluding only contracts for ships and their machinery for guns and gun mountings, and for yard machinery, which are under the charge of the Controller of the Navy, and all the requirements of the Director of Works excepting coals and timber, which is imported direct); the regulations under which these duties are carried out are, in practice, easy to work under; is quite satisfied with them, (*Mr. Hall*), 1767-955.

ORDNANCE COMMITTEE:

The decision of what questions should go to the Committee rests entirely with him; has no suggestions to make for improvement in its procedure (*Sir H. Brackenbury*), 5336-56, 5374-88.

ORDNANCE FACTORIES:

The factory accounts are audited by the Accountant-General and the Comptroller and Auditor-General (*Col. Bainbridge and Mr. La Brooy*), 4401-13, 4635-47, 4658, 4661-74, 4694-8, 4735-9, 9117-27.

Practically, the factory cost accounts are audited on behalf of the customers (*Mr. La Brooy*), 4648-53.

Details in reference to the distribution of labour between day-work and piece-work in the factories, 9187-218.

Details as to the introduction of individual piece-work as distinct from gang piece-work (*Mr. C. Harrie*), 9227-62.

One of the duties of the local auditor is to compare factory prices year by year, and factory prices with outside trade prices, 9253.

Details of the procedure adopted in the quarterly stock-takings, 9283-304.

Details of the system employed for estimating the cost of piece-work, 9305-57.

Doubts very much whether the adoption of day-work would lead to simplification in the accounts, 9325.

The present form of account is mainly due to the requirements of Parliament, 9327-42.

ORDNANCE WORKSHOPS:

The scope of the ordnance workshops in Ireland should be extended (*H.R.H. the Duke of Connaught*), 8789-811.

PAY AND ALLOWANCES:

Examination and audit are rendered far more difficult than need be by the complications in the soldier's pay and allowances (*Mr. Wight*), 4034-9.

Only a small financial loss would have been occasioned by calling the messing allowance pay and treating it as pay (*Mr. Flynn*), 5003.

Would be inclined to consolidate pay and allowances more than is done now (*Sir R. Buller*), 8183-6.

Would give consolidated rates of pay; would also consolidate the pay of officers in the districts (*Sir W. Buller*), 8355-75.

Does not approve of deductions from soldiers' pay (*H.R.H. the Duke of Connaught*), 9060-2.

PAY DEPARTMENT:

The members of the Pay Department and the Accountant-General's Department should be interchangeable between the War Office and the districts (*Sir H. Brackenbury*), 5356-64, 5372, 5373.

Would amalgamate the whole Pay and Accounts Department into one, 5359-61.

While the members of the Pay Department are commissioned officers they should be under a Military head, the Quartermaster-General (*Lieut.-Gen. Sir C. M. Clarke*), 6827-9.

There is an advantage in placing Paymasters under the Quartermaster-General rather than under the Accountant-General (*Sir B. Knox*), 4088, 4101-4, 4191.

The old system of Regimental Paymasters was a bad one, 4105, 4208.

If the Pay Department is kept down to the smallest peace limit, it is inadequate to the larger demands that are made upon it in time of war; this would especially be the case under a system of local audit (*Mr. Marziale*), 3317, 3388, 3389, 3445-50.

Officers ought to have from five to seven years' service before they come to the Army Pay Department; the maximum age-limit should be lower than 35 (*Col. Drage*), 3661, 3666-9.

Officers joining the Army Pay Department from the Army know more of the requirements of the Service than those coming from the War Office, 3662.

Thinks the Pay Department has been treated, to some extent, as a provision for men who were being turned out of the Service on account of age, 3663-5.

The strength of the Pay Department has proved inadequate for the requirements of war, 3743-4.

It would be well for the General Officer to be in closer relations with the Paymaster, 3628-37.

It is better to have the Pay Department under the Quartermaster-General than under the Financial Secretary (*Sir Evelyn Wood*), 5562-4.

PENALTIES :

- Penalties for delay in executing contracts are enforced in a good many cases (*Mr. A. Major*), 46-51, 62, 2784.
- In cases of disagreement with other branches as to fines refers to the Financial Secretary, 2783.
- If he dealt with contractors would be more rigorous with regard to penalties (*Sir H. Braokenbury*), 377, 389, 393-7, 428, 436, 441.
- The Director of Contracts has no interest in enforcing penalties, 402, 431, 435, 479.
- The actual infliction of penalties should not be in the hands of anyone short of the Financial Secretary, 2603, 2604.
- The system of penalties is very unsatisfactory; they are rarely enforced (*Col. J. Stevens*), 542, 701, 809, 625.
- Would enforce penalties more rigorously (*Col. F. E. Mulcahy*), 843-7.
- Penalties are not often enforced; each case is considered on its own merits (*Col. C. M. Watson*), 1006-13, 1059.
- Has always held that the infliction of fines should be carried out more rigidly (*Mr. Fleetwood Wilson*), 1584, 1609.
- If contractors felt that the system of fines was overdone they would put up their prices (*Lord Haliburton*), 2116.
- The questions of fines is a very difficult one to deal with (*Sir B. Knox*), 2428.
- Understands that the infliction of fines is hardly ever imposed; if it were done rigorously prices would be put up (*Col. Bainbridge*), 4357.

PRINTING AND STATIONERY :

- The head of a department should have the right to deal direct with the printers in all cases (*Col. C. M. Watson*), 6208-19, 6489, 6492-4.
- The distribution of stationery should not be with the Central Branch, it should be distributed by the Store Branch (*Mr. Marzials*), 7273.
- Sees no objection to Inspector-General of Fortifications taking charge of his own printing (*Mr. Cubitt*), 6686-757.
- Except on the possible ground of economy, there would be an enormous advantage if the War Office could make its own arrangements with the printers, 6758-65.

PURCHASES :

- Generals of Districts have power to purchase stores locally up to 50*l.*, the Principal Ordnance Officer at Woolwich up to 25*l.* (*Mr. A. Major*), 92.
- The abolition of the system of employing brokers has been an advantage to the public, 2950-3.
- Details in reference to local purchases of bedsteads, 2823-8; horse-hair, 2850-66; corn crushers, 2867; mule harness, 2917-32; axes and hammers, 2934-42.
- Is limited to 25*l.* for purchases (*Col. J. Stevens*), 679, 800-8.
- The work of supplying stores would be more satisfactorily performed if the purchases were effected directly by the heads of the departments, 514, 524, 549, 550, 793-609, 658.
- The Director-General of Ordnance should have a general power to buy with a discretion to buy with or without tenders, 593-8.
- Officers should have an opportunity in time of peace of learning how to make purchases such as would be required in time of war, 681, 682.
- Details of purchases of—signal rockets, 501; tent pins, 518; tents, 552; tent mallets, 558, 611; packing cases, 561, 797; corn-crushers, 593; bedsteads, 670; mule harness, 684; medical stores, 686; stretcher slings, 696.
- Sees no advantage in making purchases direct (*Sir C. M. Clarke*), 1443, 1528.
- Local officers will sometimes, and without authority, commit the department to purchases for which subsequent authority has to be given (*Mr. Perry*), 1970-84, 2038-43, 2055-61.
- It would be a distinct advantage if the Contracts Branch could get the orders to purchase at definite dates for the largest possible quantities 2017-23.
- Advocates making all large purchases by means of the Contract Branch, but the system should admit of the departments making direct purchases in extraordinary circumstances (*Sir B. Knox*), 2264, 2337-9, 2373-2420.

PURCHASES—cont.

- Would not give power of purchase to heads of departments, but to the Store Department at Woolwich (*Sir G. Clarke*), 2469.
- It would be a considerable convenience if their power to purchase stores were extended from 50*l.* to 250*l.*, 6665-7.
- Would like to have the power of purchasing stores up to 500*l.* (*Sir R. Harrison*), 5921.
- It would be a good thing if a sum of 300*l.* a year were placed at the absolute disposal of the General to meet small services (*Sir W. Butler*), 8326-40.

REGISTRY :

- The unsatisfactory manner in which the Registry does its work is a cause of delay; methods of improvement (*Col. C. M. Watson*), 6221-43.
- Would like to have the Registry at the Horse Guards put under the Inspector-General of Fortifications, 6243, 6414-6, 6541-6.
- As at present worked, the Registry is a source of absolute danger to the department (*Mr. Fleetwood Wilson*), 4782.
- At present the responsibility for the Registry rests with the Permanent Under Secretary, 4782, 4860.
- Ever since the Higher Division Clerks were withdrawn the Registry has gone from bad to worse, 4783.
- If every great department had its own registry, there would be confusion and delay; the machinery is sound if properly worked, 4815-24, 4919, 4920.
- The state of the Registry at the War Office is a scandal; it should be put under a Chief Clerk and Registrar, 4760-3.
- The head of the Registry should have a controlling and guiding influence over the work on papers throughout the department, 4773-830.
- It is an unfair temptation to put important papers in the hands of men with small salaries; the custody of confidential documents should be in the hands of a Higher Division Clerk, 4781.
- One of the chief duties of the Assistant Under Secretary should be the superintendence of the work of the Registry (*Sir E. Knox*), 5043-7, 5071.
- The head of the Branch which receives papers is responsible for sending them on with the utmost rapidity, 5110.
- In normal times there would be no advantage in introducing a Chief Clerk between the Assistant Under Secretary and the Staff Clerk at the head of the Registry, 5072.
- All letters passing through the Registry reach the hands of the persons responsible for dealing with the subject in the course of an hour or so, 5063-5.
- The function of the Registry is only to receive letters and index decisions, &c., 5076, 5078-9.
- If there are delays in getting answers from the War Office, would not attribute them to any fault of the Registry, 5080-7.
- It is not the function of the Registry as at present constituted to prevent more than one paper running on the same subject at the same time, 5111-30.
- Confidential papers are at present in the hands of the head of the Registry and his assistant, there is no objection to this, 5131-5.
- For the purposes of proper supervision and distribution of its work, the Registry should be under a Higher Division clerk (*Mr. Marzials*), 7274-80.
- Is not in favour of the suggestion that each branch should have its own Registry, 7282-84.
- Confusion in regard to War Office decisions arises owing to the unsatisfactory way in which letters are treated on receipt in the Registry; would prefer the system of addressing letters to the head of the particular department which dealt with the subject matter (*Sir F. Maurice*), 7467-99, 7530-1, 7545-9.
- Work between the districts and headquarters would be expedited if each department of the War Office had a Registry of its own (*Maj.-Gen. Swaine*), 7587-91.
- On the whole, the Registry distributes the correspondence without undue delay and to the right department (*Lieut.-Col. Cowans*), 9872-6.

REGULATIONS :

Simplification of regulations is the great desideratum (*Mr. Marzials*), 3415-25.
 It is necessary to have a central branch to deal with all regulations, 7288.
 It will not be possible to simplify the regulations until the matters they deal with are simplified, 7289.
 Paymasters are not consulted as to the working of regulations, but it is left to them to make representations to headquarters (*Col. Drage*), 3736-8.
 Is very dissatisfied with the regulations (*Mr. Flynn*), 4953-61.
 In theory, his branch has no voice in the policy of a regulation, but they do raise questions, 4962-9, 4990, 5027, 5038-41.
 The Pay Warrant cannot be made a good book of regulations unless some of the conditions are simplified, 4970-1.
 The Pension regulations are excessively complicated, 4970-7, 4984, 4998.
 The subject matter of the regulations is made more intricate than it need be, or would be, if the detailed effect were considered before the decision was given, 4978.
 Of late years there has not been much difference in the number of regulations issued, 4992.
 The complication of the regulations arises from the desire of the War Office to have a regulation to cover everything, 5018.
 The red tape in the regulations arose from the War Office being too much harried by the Treasury and by questions in the House of Commons, 5019, 5020.
 It is his duty to see that all branches concerned are consulted before any regulation is issued, 4956, 5028-31.
 The Inspector-General of Fortifications should make his own regulations (*Sir R. Harrison*), 5517-9.
 Correspondence would be reduced if the regulations were simplified and codified, (*Sir C. Grove*), 6993-7.
 The number of small matters which under the Pay Warrant require the approval of the Secretary of State have diminished of late years, but are still far too many, 6911-9.
 Many of the regulations bind everybody much too tightly for the public advantage (*Sir P. Maurice*), 7573-4, 7581.
 The regulations are badly worded (*Maj.-Gen. Swaine*), 7739-46.
 Many of the regulations affect principles of which the War Office alone can be cognizant (*Sir R. Buller*), 8087.
 It is very important to simplify the regulations and make them more elastic, 7989, 7990, 8171, 8179, 8240-3.
 The War Office supervision of a General's functions is valuable, it collates the system of looking at things from a broad point of view (*Sir T. Fraser*), 8654-7.
 The regulations are very complicated, but as a matter of discipline it is necessary that all should be guided by the same principles throughout (*H.R.H. the Duke of Connaught*), 9070-9.

RIFLE RANGES :

One department might be entirely charged with the acquisition of rifle ranges (*Sir C. M. Clarke*), 6777-86, 6860-2.
 The purchase of ranges is a very complicated question (*Sir R. Harrison*), 5956-60.
 At present the Quartermaster-General is responsible for all ranges (*Col. Skinner*), 7107-52.
 Where there has been delay in the provision of a rifle range, it has arisen, as a rule, from failure to find a suitable site at a suitable price, 7233-60.
 It is essential that the Adjutant-General, Quartermaster-General, and Inspector-General of Fortifications should be consulted in reference to the acquisition of rifle ranges (*Sir T. Fraser*), 8744-9.

SPECIFICATIONS :

At the suggestion of the Director of Contracts specifications are frequently modified (*Mr. A. Major*), 137-44.

STOCK-TAKING :

The object of stock-taking is to get at the cost of the articles produced in the Ordnance Factories; details of the procedure adopted (*Mr. La Brooy*), 9081-99, 9137-86.

STORES :

Would allow the Officers Commanding a unit so much money for the upkeep of his stores (*Sir R. Buller*), 8045-9, 8197-201.
 Wants to see throughout the Army more responsibility placed upon individuals; that can only be done by delegating financial powers in the expenditure for stores, 8109.
 In regard to most stores would make the districts self-contained (*Sir W. Butler*), 8380-6.
 Would like to see the limit under which a General can authorise local purchases of stores raised to 100l. (*H.R.H. the Duke of Connaught*), 8812-4.
 Would give a money allowance in lieu of material in kind for the upkeep of equipment, 8828-33.

SUB-LETTING :

The Director of Contracts depends upon reports in regard to sub-letting (*Mr. A. Major*), 306.

SUPPLIES :

The distribution of orders between the Manufacturing departments and the trade is done by the Allocation Committee (*Mr. A. Major*), 86, 262, 263.
 The local food supplies procured by Generals in districts are only for current needs, 102, 230.
 If he were given a free hand in regard to contracts would constantly be sending out his people to try and find out fresh sources of supply (*Sir H. Brackenbury*), 2616-9.
 Does not think the Director of Contracts makes himself acquainted with all the available sources of supply (*Col. Steevens*), 552.
 Maintains a familiar acquaintance and touch with the sources of supply of all materials he requires (*Col. Bainbridge*), 4503-10.

TENDERS :

Before tenders are considered the last prices are invariably referred to (*Mr. A. Major*), 314.
 During the year 1900-1, 42,285 tenders were received, 1698.
 Tenders can be more conveniently settled at Headquarters than at Woolwich, 1710.
 In cases of disagreement with other Branches as to tenders, refers to the Financial Secretary, 2786, 2787, 2954-60, 2996-3006.
 Even in time of war the system of tender is the most expeditious, 2906-9.
 Tenders would not be treated on principles of fair competition if they were more largely delegated to the districts, 2975.
 In deciding upon a tender, the contractor's ability to carry out the contract, and the quality of the goods he delivers should all be taken into consideration as well as price, 2514.
 The General Officer Commanding has to send tenders to all contractors on his arranged list (*Col. C. M. Watson*), 1096-1100, 1107, 1108.
 If all tenders were sent to the General Officer Commanding it would be simpler than the present plan, 947-9, 1180-93.
 The final decision in accepting tenders for important work should rest with those who have to carry out the work (*Col. G. Hildebrand*), 1360.
 Local tenders are invited by public advertisement (*Sir C. M. Clarke*), 1405-12.
 The acceptance of local tenders is left entirely to General Officers, 1413-6.
 Thinks he has the power to withhold his consent to the acceptance of a tender (*Sir G. Clarke*), 2461-3.
 Very seldom goes above the lowest tender (*Col. C. H. Bagot*), 2693.
 Certain classes of tenders are always referred back to him before acceptance (*Col. Bainbridge*), 4259-67.
 Is sometimes compelled by the Contracts Branch to accept the lowest tender; details, 4268-96, 4493-500.
 Would rather have power of purchasing to a greater extent than of calling for tenders to a greater extent; details of the values of the various tenders put out in 1899-1900, 4362-400, 4502.
 Has every inducement to accept the lowest tender, 4481.

TREASURY :

All new Civil situations carrying pensions have to be submitted to the Treasury (*Mr. Chalmers*), 3059.

Treasury may sanction urgent new works without waiting for the Vote of the year, 3066, 3071-3.

Treasury has no power to vote money, can only sanction new services if there is old money for them, 3095, 3096.

Treasury always goes through War Office Estimates carefully, 3260, 3285-9.

If the provisional powers of the Treasury were conferred on the Secretary of State, the difficulties of the War Office would be much increased, 3034.

The necessity of reference to the Treasury makes the Accountant-General keep a close watch on Votes, 3042-4, 3212.

Treasury control is based upon the necessity for uniformity in regulations, 3061, 3065, 3120.

Power of the Treasury in regard to new works, 3088-94.

Rule as to Treasury sanction for purchase, &c. of land and premises originated with Parliament, 3093-119, 3301.

Treasury would have no difficulty in enlarging rewards to inventors, and royalties if War Office wish it, 3148-50.

Is not aware that there is any dissatisfaction on the part of the War Office with the present Treasury control, 3206-10, 3225-7, 3231-3, 3263, 3275, 3276.

Appeals to Treasury are not so frequent from the War Office as from the Admiralty, 3038, 3292-8.

The control of the Treasury is neither needless nor unreasonable (*Mr. Marzials*), 3451-6.

VOTES :

In order to obviate present delays in matters of finance, the Inspector-General of Fortifications should be made responsible for his own Votes (*Col. C. M. Watson*), 6196-208, 6477-92.

Departments should be as little as possible interfered with in the administration of expenditure under their Votes (*Sir C. M. Clarke*), 6845.

There must be a reserve in hand under Part II., in order to meet emergent services (*Col. Bagot*), 6619-23.

It would give less trouble if Parts I., II., and III. were converted into only two divisions, 6359-64.

Transfers between Votes require the sanction of the Treasury and subsequent authorisation of Parliament (*Mr. Chalmers*), 3027-33, 3211-5, 3264.

The previous sanction of the Treasury to a transfer between the subheads of a Vote is not asked for unless some change of policy is involved, 3027, 3037-46, 3216-26, 3277-84.

Would not be in favour of changing the present system so that men and money could be voted prior to the rendering of details, 3254.

There should be a reference to an outside body in regard to foreseen expenditure for which Parliament has made no provision, 3044-5, 3265.

As regards money for other purposes than pay and allowances, it would probably be salutary if fuller powers were given to the War Office, 3055.

It is very dangerous for a spending department to assume parliamentary sanction for expenditure, 3067-70, 3221.

VOTES—cont.

The Treasury would be quite prepared to lump together the provision for the year for cognate works in a district, 3074-81, 3240-51.

Does not think the War Office would wish for greater freedom in regard to Parts II. and III., 3084-7.

Previous Treasury sanction is always necessary for the insertion in Army Estimates of a service estimated to cost over 30,000*l.*, 3124-6, 3290.

Details of the general principles which guide Treasury control of Army expenditure, 3204, 3205, 3262.

Up to the present has not had nearly enough money to maintain the barracks; Part I. should be confined to new work, and all repairs and maintenance should go to Part III. (*Sir R. Harrison*), 5773-7.

The Inspector-General of Fortifications should bring forward for annual estimate or for loans such new services as Army changes render necessary, 5778-816.

Would make Generals Commanding responsible for the complete financial bearing on all proposals they put forward (*Sir C. Grove*), 6384-95, 6967-71, 7053-7.

Every spending department should frame its own Estimates, 6987-92.

The Commander-in-Chief should have the amount of money allotted to him by Parliament placed absolutely at his disposal, and the sum, once settled, should be voted for a certain term of years, 7058-72.

When the policy of expenditure has been settled, the heads of the spending departments should be allowed to administer their own Votes (*Sir R. Buller*), 8174, 8175.

Every building should be a lump sum Vote, 8020-7, 8124-32.

Would give a General a Works Vote and a Vote for Stores for his district (*Sir W. Buller*), 8283-97, 8324, 8336, 8471-92, 8516-8.

It would be a great advantage if Generals knew in October what works would be included in the following year's Estimates (*Sir T. Fraser*), 8561-71.

The General should have a lump sum voted to cover the expense of running his command (*H.R.H. the Duke of Connaught*), 8936-50, 8973-4, 9017-42.

£200 or £300 should be placed absolutely at the disposal of the General to meet small exceptional services, 8924-31.

WORKS :

The due execution of a works contract must rest with the Commanding Royal Engineer of the district (*Col. C. M. Watson*), 982-4, 989, 1002-5, 1137, 1149.

The Inspector-General of Fortifications should have the deciding voice in all works contracts (*Sir R. Harrison*), 5918-20.

Troubles in regard to works sometimes arise through a want of system between the districts and the War Office (*Sir R. Buller*), 8028-35.

Would give Generals fuller powers in regard to works; they should have full power over all savings (*H.R.H. the Duke of Connaught*), 8765-75.

MINUTES OF EVIDENCE
OF THE
COMMITTEE
ON
WAR OFFICE ORGANISATION.

LIST OF WITNESSES EXAMINED BEFORE THE COMMITTEE.

No.	Witnesses.	Page.
1	Mr. Alfred Major, Director of Army Contracts - - - - -	1, 66, 112
2	Lieut.-General Sir H. Brackenbury, G.C.B., K.C.S.I., Director-General of Ordnance -	14, 101, 218
3	Colonel J. Steevens, C.B., Principal Ordnance Officer at Woolwich Arsenal - -	20
4	Colonel F. E. Mulcahy, Chief Ordnance Officer at the Royal Army Clothing Department	32
5	Colonel C. M. Watson, C.M.G., Deputy Inspector-General of Fortifications - - -	37, 250, 257
6	Colonel G. Hildebrand, Deputy Inspector-General of Fortifications - - -	48
7	Lieut.-General Sir C. M. Clarke, Bart., G.C.B., Quartermaster-General - -	53, 274
8	Mr. G. D. A. Fleetwood Wilson, C.B., Assistant Under Secretary of State for War -	58, 193
9	Mr. W. C. B. Hall, Assistant Director of Navy Contracts - - - - -	69
10	Mr. W. P. Perry, Assistant Director of Army Contracts - - - - -	75
11	Lord Haliburton, G.C.B. - - - - -	79
12	Sir Ralph Knox, K.C.B., Permanent Under Secretary of State for War - - -	85, 167, 208
13	Colonel Sir G. S. Clarke, K.C.M.G., F.R.S. (a Member of the Committee), Superintendent Royal Carriage Factory, Woolwich Arsenal.	97
14	Colonel C. H. Bagot, C.B., Deputy Inspector-General of Fortifications - -	108, 267
15	Mr. R. Chalmers, C.B., Principal Clerk at the Treasury - - - - -	125
16	Mr. F. T. Marzials, Accountant-General of the Army - - - - -	138, 154, 295
17	Colonel T. W. Drage, C.B., Chief Paymaster, Home District - - - - -	146
18	Mr. G. P. Wight, Principal Clerk (Examining Subdivision), Accountant-General's Department.	161
19	Colonel E. Bainbridge, C.B., Chief Superintendent, Ordnance Factories - -	178
20	Mr. H. F. Donaldson, M.I.C.E., Chief Mechanical Engineer, Ordnance Factories -	186
21	Mr. J. T. La Brooy, Civil Assistant to Chief Superintendent, Ordnance Factories -	189, 375
22	Mr. J. A. Flynn, Principal Clerk (Army Regulations Subdivision), Central Department	204
23	General Sir Evelyn Wood, G.C.B., G.C.M.G., V.C., Adjutant-General to the Forces -	226
24	General Sir R. Harrison, K.C.B., C.M.G., Inspector-General of Fortifications - -	233
25	Mr. J. M. Bull, Principal Clerk (Supplies and Transport Subdivision), Accountant-General's Department.	245

COMMITTEE

ON

WAR OFFICE ORGANISATION.

FIRST DAY'S MEETING.

At the War Office.

Tuesday, 8th January 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.
Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

The proposed procedure was discussed, and it was decided to send a draft letter on the subject of decentralisation to General Officers Commanding (*vide* Appendix VI. (a)), and also a draft letter to certain high officials connected with the administration of the War Office on the general conduct of business in that Department (*vide* Appendix I.).

SECOND DAY'S MEETING.

FIRST DAY'S EVIDENCE.

At the War Office.

Wednesday, 9th January 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.
Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.,

Mr. H. J. GIBSON, *Secretary*.

Mr. ALFRED MAJOR examined.

1. (*Chairman*.) You are the Director of Army Contracts, I believe?—Yes.

2. How long have you held that position?—Since July 1895.

3. And before that, were you connected with that branch, or with other branches of the War Office?—With other branches.

4. Therefore, you had no special experience of your present branch before you took up the position of Director of Contracts?—I had not been in the branch, but I had had considerable experience through the 10 or 12 years previously in dealing with stores.

A 15090.

5. But you were not really connected with the contracts branch before you took up the position of Director?—No.

6. Do you think you could give us a short sketch of the history of the contracts branch, and the reasons which led to its establishment; perhaps you have some memorandum in your office which you could put in?—Yes, I have a paper which gives the history of the contracts branch from the time of its starting to the present date.

7. The contracts branch was established in 1855, was it not?—Yes.

Mr. A. Major.

9 Jan. 1901.

A

Mr. A. Major.

9 Jan. 1901.

8. What led to its establishment as a separate branch?—Before the contracts branch was established, stores that were required for the Army had been purchased by another headquarter department, the Board of Ordnance. The chief clerk of the Board of Ordnance discharged the duties which were afterwards transferred to the Director of Contracts.

9. Then there was practically no change of system?—No, as far as I can ascertain all materials and stores required by the Army had been purchased by the Board of Ordnance since about 1826.

10. Then the Director of Contracts' Office was not made in 1855 in consequence of any complaints in regard to the previous system, or because it had been ascertained to be faulty?—I believe it was not regarded as perfect.

11. And the system is practically the same now as then?—I say here, in this memorandum, "The contracts branch was created during the Crimean War. Until 1854, all contracts for army supplies at home were made by the Board of Ordnance. In June 1855, the Board of Ordnance was abolished, and at the same time a distinct contracts branch was established in the War Office superintended by a Director-General, whose title was subsequently altered to that of Director. The duties of the Director-General as defined by the original Order in Council were to consist: (1.) In providing, by means of public competition and contracts, for the supply of all military and other stores, and for the execution of other such services as may be required by the various civil departments of the Army. (2.) In making purchases and agreements when required, by private treaty on special written instructions from the Minister of War. (3.) In superintending the execution of all agreements made by him up to the time of final competition, and in taking all necessary steps for enforcing the fulfilment of all contracts." You will see from that there was no absolute change of system regarding the establishment of the contracts branch in 1855.

12. The scope and business of the contracts branch has been inquired into since then by various parliamentary committees, has it not, without any change having been made, and the principle on which it was established has been affirmed on various occasions?—Yes, in fact the last parliamentary committee that sat upon the contracts branch of the War Office had under its consideration a proposal, which they very properly rejected, to make a buying department for the whole of the service.

13. You mean not only the military service, but the whole of the Government services, I presume?—Yes, the whole of the Government services.

14. As your branch is now constituted, your business is primarily to supply goods according to specifications on demands made by the various districts and departments?—Quite so. There are, of course, exceptions to specifications, things that are bought according to samples or patterns.

15. Is there any difference in procedure as regards the orders which you receive from the districts and those you receive from military departments? Do they come forward in any different way?—I do not receive any demands from the military districts.

16. The military districts, I believe, buy certain stores locally without coming to you, but for what we may call more elaborate stores, their demands would reach you through the military departments at headquarters?—Yes.

17. When you have supplied the goods according to the specifications, they are inspected, are they not, by the inspecting branch, which is under the Director-General of Ordnance?—That is so.

18. During the process of manufacture do you take any action to see how the order is getting on, and whether it is being properly executed?—No. When contracts are delayed it is our custom, if we can spare time, to visit the works to see the contractor and ascertain what progress is being made.

19. Is that only when delay has already occurred?—That is so.

20. Would you, in the course of a large order, send a representative to see whether it is going on satisfactorily and likely to be up to time?—No.

21. Have you no machinery for doing that?—If it were thought necessary, I have the machinery.

22. Would you apply to the inspecting branch under the Director-General of Ordnance for an inspector?—I should apply to the Director-General of Ordnance, and say that I thought it was necessary to make an inspection of the works of such-and-such a firm in order to see how our orders were progressing. I have just done it in the case of guns and projectiles that are in order from certain firms. Two or three months ago I thought it was very important that we should know exactly how these orders stood. I selected my representative, who would deal with the matter from the contract point of view, and I asked the Director-General of Ordnance that experts might be sent with him to judge of the manufacturing progress made, and to form an opinion as to the time in which the orders would be likely to be completed. A competent committee was formed, consisting of my assistant director, the superintendent of the gun factory, and a mechanical engineer, Mr. Bannister, and they made an inspection of the works of the firms. The report, which occupied three weeks to get out, was a very elaborate one, and discloses information of a highly useful character, and has placed us in the position of knowing exactly the time in which these orders are expected to be completed.

23. What would have been the functions of your assistant on that committee, seeing that he would have no technical knowledge?—His function would be to deal with the matter from a contract point of view. He took with him full particulars of the contracts, and the times at which they were to be finished. He is always considered to be the proper man to go on expeditions of that kind as the representative of the Director of Contracts.

24. Would he have any power to examine into the order-books of the contractors, to see, for instance, that they had not, after taking an order from the Government, taken some other order from outside, which would occupy their plant and relegate the Government order to a second place?—Certainly. Going as the representative of the Director of Contracts, I do not say that he would necessarily examine into the books, but he would get the information verbally from the principals of the firm as to whether they had taken orders and whether those orders were interfering with the Government orders. Judging from the works, he would more or less be able to see whether the information given to him was correct.

25. Is there no condition attaching to the contract which would give him the right, if he had any reason for doubting the information thus given, to look into the actual books of the firm and see what orders they had in addition to the Government order?—I have never known a case in which contractors have refused to give full information to a representative of the Secretary of State.

26. There have been cases in the past, have there not, of a Government order having been relegated to second place, while another order taken by the firm has been put before it?—I think, in times gone by, there have been complaints in regard to the action of one great firm especially. In a case of that kind there are very great difficulties with a commercial firm in executing our orders, as there are a great many changes made in the progress of an order, especially in regard to guns and mountings. A firm has an order, say, for 28 9-2-in. guns; after they have the forgings ready, or perhaps when they have commenced, or are about to commence, the breach mechanism, there is an alteration made in the pattern which absolutely suspends any further work for the time being upon those guns. What are the contractors to do? They take up other work the moment the alteration in that gun is made. Perhaps the alteration may suspend all work on those guns for three months. In the meantime, having taken further orders, and having put the men on them, they must continue to employ them so as to finish the work in a certain time. It is difficult to take away the whole of the staff from that work and put them upon the work from which they have been temporarily separated.

27. (Sir George Clarke.) That means to say that within your experience you have no general complaint to make against contractors as regards their deliveries to the War Office?—No.

9 Jan. 1901.

28. Taking them through a series of years, whatever the contracts have been in respect of work done, you have generally found private contractors respond to the wants of the War Office, and eager to keep up their connection with the department?—That has been so as a general rule; there are some exceptions.

29. (*Chairman.*) Can you give a favourable opinion of private contractors as a whole during your experience of the last ten years with regard to punctuality in deliveries?—I can give a most favourable opinion; they usually execute their orders in the time promised. There are exceptions. Sometimes the failure arises from want of knowledge of their own capabilities, and sometimes contractors make promises recklessly.

30. Would you say delays in fulfilment of contracts are due mainly to changes of the work to be done, after the order has been given?—That is an important cause, but sometimes, of course, failure is due to manufacturing accidents, which interfere with the production of the article. With regard to the supply of an article like cordite, contractors sometimes go for a considerable time delivering with great punctuality, then something goes wrong; their glycerine, or their acetone is wrong, which probably it is not in their power to control, and a very considerable delay arises.

31. Referring to the point that delays take place in consequence of changes made after the order is given, such as changes of pattern, or of mechanism of guns, does that frequently happen?—It frequently happens in regard to warlike stores.

32. (*Sir George Clarke.*) That could only happen, I presume, in the case of manufactured articles, and not in the case of materials?—Yes.

33. (*Chairman.*) In the case of articles where there has been no change in the pattern, and where there have been no manufacturing accidents, but where there has been delay, for instance, in a supply of ammunition in which no change has been made, has it not occurred that contractors, having taken an order from the Government, have postponed that order in order to take up another order which has been given to them from outside?—We believe, in one particular case, such a thing did occur. I only know of one instance in which, I believe, our order for ammunition was postponed to enable a firm to execute other orders.

34. (*Sir George Clarke.*) You would not have any information of that, I presume, except in such cases as you have described, where you sent a committee down to inspect; you would not have any other means?—We should only have means of knowing of the work done towards the execution of an order by sending someone, and making an inspection.

35. (*Chairman.*) Unless the delay actually occurred, you would not have reason to make inquiry, and you would not make an inquiry?—No.

36. You have not a staff of your own to send down to keep you informed as to the execution of the order?—Many of my officers would be able to form a very good opinion upon the question.

37. If they did not go down, you would be in the dark until delay actually took place?—Yes.

38. Are there not some proposals now for further strengthening the contracts branch by giving it a staff of experts in manufacturing, to enable them to go down and follow the progress of large orders, and see that those orders are being satisfactorily executed, that delay is not likely to occur, and also to satisfy themselves that Government orders are not being relegated to a second place?—Yes, the Secretary of State decided that in June last, and an application has recently been put forward to the Treasury on the subject.

39. That application indicated, did it not, that the contracts branch required strengthening in certain particulars?—Yes, certainly. I may say that the contracts branch has been understaffed ever since I have been in it. Two years ago I brought under the notice of the authorities the dangerous condition of the contracts branch as regards the staff, and the Secretary of State directed a committee to go into the matter, and that committee reported, but no steps whatever were taken to strengthen the branch, although the work was being done under great strain. The men were working until 8 or 9 o'clock in the evening before this war broke out, and I have received no assistance to meet the extra pressure of this war,

except inexperienced additions to my staff. Although we have done well, I contend we should have done better if I had had a proper staff to meet the enormous demands caused by the war.

40. You formulated your demands, I believe, for an increased staff before the committee which recently sat under Mr. Powell-Williams?—I did.

41. Have you any additions to make to those demands?—Yes. The work since I formulated those demands has increased nearly threefold, and although you might suppose the pressure of the war, to a certain extent, was over, my work does not decrease in any shape or form; at present it is nearly treble what it was before the war broke out.

42. Would you be good enough to let the Committee have a statement showing your demands for increased strength under present circumstances?—I will. (See Appendix V. (g).)

43. Coming back to the point of the two travelling inspectors, which it is now proposed to add to your branch, do you think that their assistance will place you in a better position for being able to help the progress of orders and secure punctuality in deliveries?—I think they will. Of course during the time that they are not employed parading the country in the way proposed, I should employ them to great advantage in doing the current work of the contract branch.

44. If an order is executed satisfactorily, and up to date, does any report reach you to that effect, or do you simply know that the order has been executed satisfactorily in consequence of there being no complaint?—If the order was executed satisfactorily I should hear nothing of it.

45. It lies with you, does it not, primarily to inflict penalties on contractors, or to deal with questions of inflicting penalties, where there are delays, or where the work is unsatisfactory?—That is so.

46. As a matter of fact, do you usually enforce the penalties which are laid down in the contracts?—We do enforce them in a good many cases. We do not make a rule of levying a fine upon contractors if their explanation accounts satisfactorily for the delay. When a contractor is reported to me for being behind time in his deliveries, the first thing I do is to ask for the reasons of the delay, and if those reasons are satisfactory, we relieve him of the fine; if they are not satisfactory, we impose the whole fine or a mitigated penalty.

47. I suppose in your contracts, as in many business contracts, every day's delay carries with it a fine of so much?—No; our fines are not on the cumulative principle, but are limited to 2½ per cent. on the portion of the order which is not delivered to time.

48. (*Sir George Clarke.*) How many fines would be imposed in the course of a year?—Some hundreds, I should think.

49. (*Mr. Mather.*) Are they chiefly for delay in delivery?—Yes.

50. Not for any question arising out of the quality of the work?—That affects the delivery very largely. If a man is unfortunate, and has a lot of rejections, delay in deliveries often arises from the number of rejections that take place.

51. (*Sir Charles Welby.*) I see in your evidence before the Contracts Committee you said: "My action, I might say, in regard to inflicting penalties on contractors, is guided by the recommendation of the committee of 1873, on purchases for public departments, which reported in 1874. They went very fully into the question of fines, and said that the imposition of penalties should be discouraged, but the practice substituted rather of buying in default. This is the principle which guides me, not only because it is the recommendation made by a House of Commons Committee 28 years ago, but because from experience we find it is the best course to adopt."—That is our guiding principle. If a man does not deliver goods in time, and we think his explanation of delay is not satisfactory, we buy in default, and charge him with the excess cost.

52. As regards a certain number of things on order there are a limited number of firms who supply, and you find it rather difficult, do you not, to punish them in that way?—Yes; it is impossible to buy in default in some cases.

Mr. A. Major.

9 Jan. 1901.

53. In these cases do you inflict a penalty?—Yes, if the explanation of the delay in delivery is unsatisfactory. I may say that as regards penalties to contractors of warlike stores, it has not been usual to inflict a penalty for delay.

54. (*Sir George Clarke.*) Is it not difficult to discriminate between the excuses you get, as it must be very difficult to say whether an excuse is valid or not?—If there is any difficulty in judging as to the excuses that are furnished by contractors, and if any expert knowledge was required, we should refer to the Director-General of Ordnance, but, generally speaking, we have the means of forming an opinion.

55. Before a fine is inflicted, would you apply to the Director-General of Ordnance for an expert's opinion?—Certainly, if it were necessary.

56. If you were not quite satisfied with the explanation offered, would you consider it necessary?—Yes.

57. (*Chairman.*) That is to say, in every case, the circumstances under which the delay has occurred are inquired into; do you deal with that yourself, with or without consultation with the Director-General of Ordnance, or are such cases taken up to the Financial Secretary?—Of late years this duty has been delegated to me by the Financial Secretary, and I have decided the question of fines on his responsibility.

58. You would consult him, however, I suppose, on important cases?—Certainly, and if there were any discussion between the supply department and myself upon the subject of levying a fine, I should, as a matter of course, go to the Financial Secretary.

59. (*Mr. Gibb.*) Do you keep a book in which you record the contract time of delivery and the actual time of delivery?—No, we do not.

60. I suppose, getting out a statement showing the number of cases where delay had occurred over a period, would involve a good deal of work?—Yes.

61. (*Sir George Clarke.*) May we take it that you would not know of delay unless a case was specially reported to you by the purchasing department?—No, we should not.

62. (*Mr. Mather.*) Would you say, from your experience, that the delays which have taken place from time to time have caused great injury to the service, and do you consider those delays are occurring too frequently from the want of proper care on the part of the contractors, or from their having made promises which they cannot keep?—Where the delay is in the execution of an order for stores, it is always inconvenient, and sometimes specially so. We frequently pay a special price for time of delivery, and when the time of delivery in that case is not kept, we, of course, visit the penalty upon a contractor with much greater severity. We inflict penalties to the fullest possible extent.

63. Is the work of your department impaired seriously by the delays of private contractors, and have you much to complain of, taking a period of two or three years?—Generally speaking, we have not much to complain of.

64. You gave us only one case, and you spoke of delays arising out of changes of pattern and changes of mechanism in guns, carriages, &c., and I believe you pointed out that that was the chief cause of delay; is that so, or are the delays caused by the private contractors?—The delays arise largely from both causes.

65. (*Sir George Clarke.*) You would not know the delays caused in most cases, I take it, unless they were such as to raise a complaint from the purchasing department?—That is so.

66. You could not tell us, I suppose, the percentage of contracts throughout the year that were behind time; you could only say that there were delays?—That is so.

67. Taking the whole of your contracts for a year, you would not be able to say what contracts were fulfilled up to date, and how many were behind time?—We could always find it out.

68. Only by reference to the purchasing or demanding department?—We could find it out by the returns furnished to us. In regard to the materials which are supplied to the manufacturing departments, we have found by experience that some of the orders which we give for the supply of materials, although promised within certain dates, are apparently allowed to remain

dormant. This seems to have gone on to a very considerable extent, and in order to enable us to judge of the capacity of contractors to deliver, and to find out whether we are justified in placing further orders with certain people, we have asked for half-yearly returns from the factories of cases in which delays have occurred, and where the deliveries are long outstanding.

69. From those returns you could, I suppose, draw up a schedule of contractors who were in the habit of being behind time?—We make a note against contractors when the delay in delivery is very considerable.

70. Do you keep any statement of the rejection of materials or goods from contractors?—If the rejections are excessive, we note that.

71. How would you know the rejections are excessive unless it were reported to you?—We always get a report.

72. Do you get a report for ordinary rejections, or only for excessive?—Not for rejections calling for no special comment, but wholesale rejections are reported to us.

73. (*Chairman.*) All articles supplied are inspected by the inspecting department under the Director-General of Ordnance?—That is so.

74. That inspection, I presume, is severe, on the whole?—I do not think it is too severe.

75. Contractors do sometimes make complaints, do they not, that the inspection is unnecessarily rigorous?—They do.

76. And you do not think there is much ground for those complaints?—As a general rule, I think not.

77. Your primary function being that of supplying orders according to specifications, another function which grows out of that is to keep in touch, I take it, with all the existing sources of supply in the country for the different articles, and to keep yourself informed as to the prospective sources of supply?—It is our duty to know the sources of supply, and to have them available when required.

78. That duty you consider, I believe, is one which could only be discharged by a central department?—I think it is certainly better discharged by a central department.

79. And, again, arising out of that, you have what almost amounts to a third function, that of encouraging and developing certain sources of supply?—That is so.

80. (*Sir George Clarke.*) Have you, by that developing system, obtained a number of contractors who supply particular articles?—Yes.

81. You have more contractors now than formerly?—Yes.

82. How do you work that system; how do you develop a trade?—We advertise.

83. No one can get on the list, I believe, without application?—No.

84. (*Chairman.*) Do you hold out expectations, as it were, to any particular trade that there is a likelihood of Government orders for certain materials during the next few years?—We advertise yearly.

85. Apart from your advertisements, do you do anything to foster those expectations?—No. The manner in which we add to our lists is, to make inquiries where it is necessary. We have gone all over the country to find contractors who would do our work during the recent pressure. We increase our sources of supply in every possible way, and wherever it seems feasible to get additional assistance when it is required. With regard to harness, when the demands were so enormous, nearly every man in the trade was occupied. We looked down the list of contractors in the harness trade, and asked them whether they would not like to tender for us, at the same time telling them we have plenty of work, and should be glad if they would look through the list of things we required, and see what they could do, and then we would send them tenders. By that means, taking harness as an illustration, where our harness orders before were distributed between five or six firms, we have so enlarged the area of supply, that we have now 100 people on our list. Though the advertisement is the ordinary method, when we have any real necessity for additional sources of supply, we exercise any method we can of finding out those additional sources.

Mr. A. Major.
9 Jan. 1901.

86. Who decides, as regards the distribution of orders, what proportion of identical articles should go to the Government manufacturing departments, and what proportion should go to the trade?—That is done at an allocation meeting at the beginning of the year, the members of that Committee being the Financial Secretary, who presides, the Director-General of Ordnance, the Director of Contracts, the Director of Naval Ordnance, and the Accountant-General.

87. (Mr. Gibb.) It is not quite clear to my mind what stores you buy; will you describe, generally, what they are? Do you buy food, forage, and all warlike stores?—Yes.

88. Do you buy all the supplies for the Army at home?—The contracts that are made in the district for the supply of commissariat stores, although they are accepted by the General Officer Commanding, are all submitted to me for criticism and approval.

89. What is the duty with which you are charged? As I understand it, from your evidence, you buy through the organisation of your department the whole of the stores required for the Army?—That is so. The purchase of horses and mules is carried out by the Inspector-General of Remounts.

90. Does any other department buy anything?—Only so far as I have delegated my authority to other people to make small purchases.

91. Is that done under the responsibility of your department?—Yes.

92. To what extent have you delegated that responsibility to districts?—There is no absolute delegation. Districts have the power to purchase stores locally up to 50*l.* in value, and the Principal Ordnance Officer at Woolwich has authority to buy stores up to 25*l.* in value. Until recently his powers were limited to 10*l.*, and he asked for further extension of power, and after submission the Secretary of State decided to give him authority to purchase up to 25*l.*

93. So far as the Secretary of State has committed that power to districts, the purchases are withdrawn from your responsibility, are they not?—No, because I always revise all those purchases.

94. Then it is practically a delegation from the Secretary of State, through you, to make those local and small purchases?—Yes.

95. But, broadly speaking, you are responsible for the purchase of all stores, of whatever kind, for the Army?—Yes.

96. The first stage in your business, I presume, is to get a requisition?—Yes.

97. From whom do you get the requisition?—From the different supply departments, from the Principal Ordnance Officer at Woolwich, from the Chief Ordnance Officer in charge of the clothing department at Pimlico, from the Ordnance factories for their materials, &c. I receive these requisitions from the factories through the Chief Superintendent of the Ordnance factories.

98. Each department requisitions you for the materials and stores which it wants?—Yes.

99. And do these requisitions come to you direct from the heads of departments?—Yes, generally speaking, but requisitions for stores for the manufacturing departments do not come to me through the Director-General of Ordnance, who is the head of the Ordnance factories, but they come, as I have said, from the Chief Superintendent of Ordnance Factories.

100. From whom do you get a requisition for the supply of food?—From the Quartermaster-General in the War Office.

101. I understand you have a general responsibility for all purchases, and I want to get in detail how you, under your responsibility, provide the stores requisitioned by the various departments, and in what form, and from whom, the requisitions reach you?—The requisitions for all food supplies which are not provided by the general officers commanding in districts come to me from the Quartermaster-General.

102. Will you tell us what are the food supplies provided by the general officers commanding in the districts; are they for the current needs of the troops in the district?—Yes.

103. Then the general officer commanding provides for the current needs of the forces under his command?—Yes, as far as food supplies are concerned.

104. And these actual contracts or purchases do not, in fact, pass through your office, although made by the delegation of your responsibility?—They come to me for examination and approval immediately after they are made.

105. If a general officer commanding enters into a contract for the purchase of meat, when is that contract sent to you?—Within a few days after it is made.

106. By whom?—By the general officer commanding.

107. What do you do with it?—Audit it.

108. Do you examine it?—Yes.

109. As regards price?—In these cases we have a schedule of tenders received, and we look through the schedule and see that the lowest tender has been accepted, or, if not, that there is some explanation given as to why it is passed over. We see that the people accepted are not on the ineligible list, as there are always a large number on that list who may be wrongly accepted.

110. And you supervise the local purchases of food by the general officers commanding?—Yes.

111. How far in practice do you find that you have to alter or cancel, or raise questions about these contracts locally made; are they generally right or are they often open to question?—The majority are correct, but there are a good many errors. I have a list which I will hand in to the Committee.

112. On the whole do you find that general officers commanding carry out the duty of local purchases satisfactorily?—I think they do.

113. They enter into wise bargains, and get things at fair prices?—Certainly.

114. When you get a requisition for stores, do you concern yourself with the quantity required?—No.

115. Or with the quality?—No.

116. Or with the pattern?—No.

117. Or with the time of delivery?—No, those are all stated on the requisitions.

118. These, then, are all matters fixed by the requisition?—Yes.

119. By the requisitioning department?—Yes.

120. Do you consider that you have any responsibility whatever in regard to any of these matters or do you consider that you are bound to buy according to the requisition of any department?—Certainly.

121. Supposing you thought that there was sufficient stock in hand of an article requisitioned, would you take that question up at all?—No, I should not.

122. You are simply covered by the requisition made?—Entirely.

123. Is the selection of firms from whom the purchases are made fixed by the requisitioning department or by you?—As a general rule it is fixed by me, that is to say, I go to the firms who are on the War Office list.

124. It is not part of the requisition that the article should be supplied by any particular firms?—Generally speaking, no; but in the case of the Ordnance factories they often specify the firms whom they think should be invited to tender, and I follow that out; but I exercise my discretion in adding firms to the lists which they give me, in order to show that we are not restricting our tenders to a limited competition.

125. Do you exercise that discretion with or without consultation with the requisitioning department?—I do that without consultation, but I do not give an order or fix on additional firms without the concurrence of the requisitioning department.

126. If the requisitioning department suggested that A., B., and C. should be asked to tender, you might add D. and E., but you would not give the order to D. or E., although they were on your list, without consultation with the requisitioning department?—That is so.

127. Have you any responsibility in regard to the stores to be purchased, any general responsibility, for what kind of stores are to be bought, and in what quantities?—I have no responsibility.

128. On whom does the responsibility for that rest? For example, take an article like field-glasses. Supposing it was desirable to have a large number of field-glasses for use in the field, does the suggestion of that need lie with you, or with whom?—With the Director-General of Ordnance.

Mr. A. Major.
9 Jan. 1901.

129. Then you do not decide on questions of necessity for purchase?—No.

130. You simply buy what you are asked to buy?—That is so.

131. Does the requisitioning department always supply the specification?—The requisitioning department would give a reference to the specification; the specification of a store is really left with the inspection department.

132. After a store is delivered?—No.

133. What has the inspection department to do with it?—I believe the inspection department is the department that always prepares the specification.

134. Who settles the quality of the article required?—That is done by the requisitioning department.

135. As the question of price is governed by specification, is that a matter into which you look, or do you leave that entirely to the specifying department?—The allocation of an order is, theoretically, always done in conference with the requisitioning department.

136. What I mean is this: There are two ways of specifying (1) better quality, higher price, (2) inferior quality, lower price. Now, do you enter into that question at all, or is the question of the form of the article required settled entirely by the requisitioning authority?—Entirely by the requisitioning authority.

137. Then you do not, as it were, judge extravagance of specification, or economy of specification?—I do not until it comes to a stage at which, owing to the extravagance of specification, I am unable to purchase the stores.

138. Supposing more copper was used in anything than was desirable, would you not pass judgment on that at all?—I will give you an instance. The timber in forms which soldiers use must be of such exceptional quality, free from knots, and so on, that although there were many thousands of these forms required, I was practically unable to buy them in consequence of the specification, and I went to the Director-General of Ordnance and said to him, you are asking me to buy things which cannot be obtained, the timber is not in the country. As a result of that the Director-General of Ordnance said, let me see some of the contractors, and we came to the conclusion that the specification must be modified. The consequence is that it has been modified, and I am able to buy as many as we want.

139. Short of putting you, as the purchasing department, into extreme difficulties, you do not exercise any supervision over the quality or kind of things bought?—I do not.

140. As regards the introduction of new material used in manufacture, or new processes of manufacture which lead to improved types at lower prices, is that subject one to which you give attention; do you watch the course of trade in these respects, or is that the duty of the requisitioning department?—The requisitioning department would do it to a certain extent, but, of course, in any case of that kind, where an economy might be affected by adopting a different kind of store, I should certainly bring it under the notice of the Director-General of Ordnance. For instance, take a domestic article of consumption like scrubbing brushes. Ours is an article made of the best bristles. Bristles are now exceedingly dear, and very difficult to obtain. The price has gone up enormously, so much so that our contract price for these articles is now somewhere about 2s. 6d., but a contractor comes to me and tells me of the difficulty, and says that nine-tenths of the population of this country use brushes that are made of American fibre, and instead of giving 2s. 6d. for them they can be supplied at 6d. In this case I should go to the Director-General of Ordnance and say, this is the price of supplying these articles to our sealed pattern, do not you think it worth considering whether we should not have the cheaper scrubbing brush of which any quantity can be obtained with ease, and he will naturally say to me, I think it would be. He would consult his experts, and probably it would result in giving a trial order for 10,000 of these scrubbing brushes, and, if successful, we should adopt the fibre instead of the bristle. In cases of that kind, which the trade brings under my knowledge, I bring them under the notice of the Director-General of Ordnance.

141. Do you confine it only to the cases where the trade brings the matter under your notice?—I am, of

course, making a general observation. I might make suggestions of a similar kind from general knowledge.

142. In these days of changes in trade, the introduction of new material is a question that must frequently arise. You have said that if it came to your knowledge you would suggest that there should be a change of sealed pattern, but is it your duty to see that the sealed patterns are altered to accord with the most modern practices of each trade?—It is not.

143. Whose duty is it to see that the supplies of the Army are in accordance with the best powers of each producing trade?—The Director-General of Ordnance is alone responsible for the patterns of the stores which are used in the Army, I have no responsibility, theoretically, for the pattern of stores used for the Army.

144. If a change of pattern were desirable, whose duty would it be to find out whether it was desirable?—The Director-General of Ordnance, but in cases in which a change of pattern is desirable, and it comes under my knowledge, it is my duty to indicate the fact to the Director-General of Ordnance, in order that he may consider it. I am not charged with that duty.

145. Do I understand that you practically decide on the firms to be asked to tender?—Yes, except in the manufacturing departments for materials.

146. Do you consider that your knowledge of trade and traders enables you to discharge that duty satisfactorily?—Certainly.

147. You know the possible firms to supply any article required for Army services?—We think so.

148. Do you keep up your knowledge by the ordinary commercial means by inquiring about the progress of each trade and the firms engaged in each. Supposing a new firm started a manufacture of an article, what means have you of finding out the introduction of new firms?—If it were a limited trade, we should probably know of it, but we should wait for the firm to apply to be put upon our list to supply.

149. You do nothing beyond the advertisement you referred to?—Unless our competition is limited; if that is very limited, we take steps to make inquiries as to enlarging our competition.

150. (Sir G. Clarke.) You ask a firm to come in competition with the trade?—There are only two firms who can make gun carriages, but I have tried to develop other firms.

151. If you found a case where the prices were very high, would you take steps to develop a third or a fourth firm?—Of course the carriage trade is a very difficult one, it means an enormous plant, and unless someone comes forward to volunteer to enter into the business in the hope of receiving an order, we have not gone so far as to take steps to initiate.

152. There have been firms who have been thinking of taking it up, have there not?—They think of it, but they go no further; they say they want orders guaranteed for three years of such and such magnitude; that, of course, would be a question if a firm came along and there was such demand for carriages that there was a necessity for getting other firms. It would be a matter for consideration, and would no doubt be brought to the notice of the Secretary of State.

153. You would not make a promise, and you could not take any initiative as to bringing a third firm in?—It is a very difficult thing to do.

154. (Mr. Gibb.) Have you found any difficulty in normal times in getting an adequate supply of contractors to tender for your work?—No, not at all.

155. So that the necessity for encouraging new people to go into any particular trade does not seem to have arisen except, possibly, in regard to special things?—No, that is so. Our competition, on the other hand, for a very large number of things is getting so extensive that it is difficult to deal with the large number of tenders.

156. Before you accept tenders, what steps do you take to find out the ability of the contractors to supply?—That is all done before the firms are put on the list. We only take firms who are considered capable of carrying out the contract.

157. The state of the firm's order book may be a more important question than the position of the firm?—We have no knowledge in giving a tender whether we shall get the articles at the time stated for delivery, but we do not go into the question of the order book.

158. If it were very important that the article which you were ordering should be delivered promptly and at contract time, would you not, before placing the contract, ascertain by actual inquiry the state of the order book of the firm to whom you gave the contract?—No, we should not.

159. You would not inquire whether there was anything in the amount of business they had on hand which might interfere with their satisfactory performance of your contract?—No, we should not; whatever the state of their order book, if a man gives a promise, and we tell him we shall expect the order completed to time, we should expect him to carry out the order promptly.

160. If you know the firm's works are fully occupied for six months ahead, would that affect your judgment in settling whether you would give them a contract or not?—No, not if the firm promises to deliver to time.

161. It may mean his putting aside other work which which he has in hand or leaving your order to take its chance after the other orders are finished?—He would probably be the fittest man to undertake the order.

162. Do not you find that manufacturers tender when they know they are really not in a position to supply the goods, and they tender at a high price, just on the chance of getting a good order?—I cannot tell, it is difficult to say when tenders come in as to whether a man is tendering at a high price because he does not want an order, but it is possible that it may be so.

163. Is it not possible, by inquiring, to find out the position at the moment as to the firm's ability?—If we have a lower tender which is accepted, we simply ignore the higher tenders.

164. Is price the governing consideration?—No, time of delivery and other things are taken into consideration.

165. Time of delivery must be dependent upon the ability of a particular contractor to make and deliver at the moment?—That is so.

166. That must depend upon how he is situated as regards orders in hand?—Yes.

167. Then you make no special inquiry about a matter of that sort?—We do not.

168. You really depend upon the contractor's promise as regards delivery?—Yes, except in special cases.

169. Do you form a judgment on the prices, or do you go by the lowest tenders?—We form a certain judgment on the prices. If a man's price was lower than that at which we considered that the article could properly be supplied, before accepting, we should communicate with him and ask him whether he was certain about his price, and we should send a pattern so that he would know what he was tendering for.

170. After his explanation, if it was still thought that his price was lower than he could do the work for, would you give him the contract?—We might not accept him.

171. Supposing prices all came in too high in your judgment, what would you do then?—Sometimes we decline the whole of the tenders.

172. You would then refer it back to the requisitioning department, I presume?—If time was not an object, we should decline the whole of the tenders, and should issue them on another occasion.

173. Would you do that on your own responsibility?—We should not do it without the requisitioning department concurring.

174. When tenders are received, do you negotiate with the firms in any cases?—That is a question which was brought up before the War Office Contract Committee, but, speaking as the Director of Contracts, we do not.

175. If you had reason to suspect that the tenderers had put their heads together and consulted with each other as to the price to be put in, would you then take the lowest tender without making further inquiry?—If the price were too high, we should not accept. Firms sometimes quote prices which are too high.

176. I am not speaking of firms who manufacture special articles, but I mean in the ordinary course of trade?—As a rule, I do not think such cases occur, as our competition is so large, and we have a system of always comparing the previous prices with those coming in.

177. Do you consider that you buy as cheaply as other buyers?—I think we buy cheaper. As large buyers we are second to none in the world.

178. What steps do you take to find out what other buyers do?—We get that information furnished to us by the trade generally; we have no means of finding out what other buyers are doing.

179. Do you ever compare notes with other buyers, such as railway companies, who buy the same things as you; do not you write and ask what they are paying for such and such a commodity?—No, we have never done that.

180. You have always been satisfied that the prices tendered were the lowest that the market could give?—That is so.

181. As a rule, you buy cheaply?—Very cheaply, I think. When Mr. Powell Williams came here with a knowledge of Birmingham business, he intimated to me that we were the laughing stock of the Midlands, because we were paying 3*l.* or 4*l.* a ton more than the proper price for copper. I am afraid there was some actual ground, perhaps, for that at the time, but it was due to the fact that we were then buying copper through brokers, to whom a promise of continued employment to a certain date had been made by my predecessors, which could not well be ignored. I have stopped buying all metals through brokers, and the consequence is, I think, we are buying copper now cheaper than anyone else. We are informed that we often buy at a profit of no more than 1*s.* 6*d.* a ton to the vendor.

182. Can you give us any idea as to the total quantity of coal purchased for the Army?—I cannot tell you now, but I will hand in the figures, if you wish.

183. Do you buy coal?—Yes, by tender.

184. Do you stack it, or do you buy it for immediate consumption?—It is stacked down at the factories, and there are yards all over the country. I do not think they have large stacks at the barracks.

185. What is the ordinary practice, to buy coal for immediate use, or to buy it to put into a stack and then to use from stack?—The ordinary course is to buy coal for the ordnance factories for delivery from time to time by ship alongside, and as it comes in it is taken to stack. In regard to barracks, it is usual merely to supply what is required.

186. Do you buy the two kinds of coal, for firegrate purposes and for manufacturing purposes?—Yes.

187. Do you select the coalfield in which the purchases are to be made?—Yes.

188. And the point where delivery is to be made?—The point of delivery would be mentioned by the factories precisely, and by the districts.

189. (*Sir Charles Welby.*) The vast majority of coal is ordered locally, I presume?—Yes, but all coal contracts come to us for acceptance, even if the tenders are sent out in the districts.

190. (*Mr. Gibb.*) In regard to coal, the delivery point is rather important as regards the price?—Very.

191. You buy, I suppose, for delivery at the point requisitioned?—Yes, for the point indicated by the department requiring the coal.

192. At what dates do you buy coal? Do you buy it at certain times, or are you constantly buying throughout the year, according to necessities?—We buy for long periods. The ordnance factories' contract is put out for a year.

193. At what period of the year is it put out?—At the beginning of the year; I believe it is in February. We do not bind ourselves to take for the year when the market is uncertain, and if from information we have got it is considered a bad time, we then reduce the period and only put it on tender for six months or three months. We exercise all the knowledge we can bring to bear on the subject, but usually the period is for a year.

194. That is with regard to manufactory coals?—Yes.

195. What about household coals?—That contract is for a year also.

196. After the tenders are accepted, you enter into the contracts for the purchase of various articles. Who settles the terms and conditions of the contract; do you, or the requisitioning department?—The specifications of the contract are laid down by the requisitioning department, but there are certain conditions that apply

Mr. A. Major.

9 Jan. 1901.

Mr. A. Major. to all contracts, and those conditions are usually settled by me.

9 Jan. 1901.

197. During your examination by the Chairman, you mentioned certain conditions with regard to special examination during manufacture. Do you exercise your judgment as to the necessity for introducing special conditions into special contracts?—In regard to providing for inspection during progress of manufacture, that would be probably suggested by the requisitioning department, or upon the suggestion of the contractor. All steel and all kinds of forgings are inspected during the progress of manufacture; and that was really a suggestion which was made by the contractors as to desirability of having inspection conducted while the work was in progress.

198. You do not exercise your judgment on the question of whether it is necessary in particular contracts to introduce special conditions to secure their performance?—No, not unless special circumstances made it desirable in any case to have inspection during the progress of manufacture. If any particular case occurs, I should bring it under the notice of the Director-General of Ordnance, and, if he thought it was expedient to have an inspection, it would be done.

199. You would not expect the contractor to suggest a condition which would be for the regulation of the contractor?—The contractor does in many cases suggest an inspection. For instance, all small arms are inspected in progress of manufacture, all sword-bayonets are inspected also, and there are many other things of that kind that it is expedient and absolutely necessary to inspect during manufacture.

200. (*Sir G. Clarke.*) The inspection department would insist upon that, would they not, and that would not be at the request of the contractor?—Sometimes, as in these things, it is expedient that there should be an inspector on the premises.

201. (*Mr. Gibb.*) Is it your duty to see that contracts are executed according to their terms?—It is the duty of the receiving department to see that the contracts are executed according to their terms.

202. Of course when you enter into a contract certain things are stipulated, time of delivery, and so forth; now is it your duty to see that all these are carried out?—It is for the receiving department to see delivery carried out.

203. When you make the contract, do you consider that your responsibility is at an end unless the receiving department communicates with you?—That is so.

204. You do not consider that you have a general responsibility to see to the proper execution of a contract?—It is done in that way, and it would be impossible for me to do that, as I have not the staff available, and it would give an enormous amount of trouble. The receiving department notifies to me in any case in which the contract is not being observed.

205. Do you send a copy of every contract to the requisitioning or receiving departments?—Yes.

206. Is the receiving department always the requisitioning department?—Yes, always, except in the case of the ordnance factories, where I get requisitions from the chief superintendent of the ordnance factories for materials, and the materials may go to the superintendent of the particular factory requiring them.

207. What I want to know is how far you, representing the buying department, keep in touch with the requisitioning department and the receiving department?—The requisitioning department and the receiving department, you may say, are the same.

208. You do not recognise any responsibility unless the matter is brought to your notice after the contract has been approved by you?—That is so.

209. It follows from that that you do not inspect on delivery?—No.

210. The inspection is done, I presume, entirely by what I may call the using branch?—That is so.

211. Do you think it would be desirable to have an inspection under the control of the buying department to say whether the things are in accordance with the contract, as well as the inspection by the using department, before the things are issued from store to the using department?—Do you mean to say a double inspection?

212. An inspection before taking into stores, and then an inspection by the using department before

they use the things in manufacture?—I do not think it would be expedient or necessary.

213. (*Sir G. Clarke.*) It would be very expensive, would it not?—It would be an enormous expense.

214. (*Mr. Gibb.*) The inspection by the using department is an inspection by people who are about to use the things?—Yes.

215. If there were an inspection by the contract branch to see whether they were delivered according to contract, would the subsequent inspection by the using department involve the employment of special inspectors? That would be simply an inspection by the department about to use the things, as to whether they were fit for use?—After the stores that are received have been inspected by the inspection department, the receiving officer, so to speak, the principal ordnance officer at the large stores at Woolwich, would have no power to find fault with these stores, which are supposed to be the proper stores, and would accept them on the responsibility of the inspection department.

216. Is there not rather a weakness there, that the entire responsibility for inspection should be divorced from the buying department?—I should not myself say that it was a source of weakness. I think it is desirable that the buying department should be divorced from the inspection, and that the present arrangement of one person buying what he considers to be right and another department saying whether they are the articles required is the best principle that can be carried out.

217. You think then inspection should be in the using department?—Yes, perfectly independent of the buying department, and it has been independent of the manufacturing department. It is so now in regard to all articles obtained from the trade; but since the manufacturing departments have been placed under the Director General of Ordnance, instead of the Financial Secretary, the Government manufacturer and the inspector are directly under the same departmental head.

218. Should not there be an independent inspection apart from the buying department and using department?—I do not think it is necessary. The inspection department practically represents the using department, as the inspection department and also the using department are under the Director General of Ordnance.

219. You say that you do not arrange for inspection during manufacture; will you tell us whether that inspection is carried out by the inspecting department?—It is. All small arms are inspected during manufacture—steel, gun carriages, and things of that sort. Wherever inspection can be advantageously carried out during progress of manufacture, I think it is done.

220. Do you consider that contractors on the whole deliver well up to contract time?—On the whole, certainly.

221. Have you not had any special reasons to be dissatisfied?—Only in certain cases. I have had great reason to be dissatisfied as regards the deliveries recently in certain special cases. But the ordinary supplies come in very fairly well on the whole. The penalty which we think brings contractors up to time is that we do not deal with them again if they do not deliver to time,—although we may keep them on our lists—we generally reduce their orders. We will not give orders to the contractor who does not keep time where it is possible to get other contractors.

222. Is there any delay in your office with respect to requisitions?—None.

223. When these requisitions reach you the specifications have already been settled, have they not?—Yes.

224. And there are no other preliminaries to settle after receiving the requisitions?—No.

225. And there is no delay in your office between the requisitions and the tenders?—There is a certain time taken up in putting out tenders, but when the requisitions are received, they are taken in hand the same day.

226. Have you had any complaint in regard to delay taking place between your receiving the requisitions and your placing the contracts?—No, I think not.

227. Is a local contract entirely exclusive of a general contract according to your system adopted?—There would be no local contract for a thing included in a general contract. May I ask the particular article which you have in your mind?

228. I was not thinking of any article, but rather of the system, because sometimes articles might be

included in a general contract for supplying throughout the whole of England, and while some districts might get their supplies under the general contract, other districts might make their own contracts locally and get those supplies under local contract?—They would not be allowed to do that. Any running contract we have for supplies throughout the Kingdom are notified to the districts, and they are obliged to draw supplies from the contractor who has that running contract.

229. I wanted to know how far you adopted making general contracts throughout the Kingdom, from which supplies could be drawn, and how far you delegated the making of contracts to the districts?—The delegation of making contracts to the districts is limited practically to the food supplies. They do not make contracts for other things, except that there has recently been an extension as regards building contracts up to 2,000*l.* in value, but otherwise no contracts are made in the districts.

230. Practically speaking the local contracts are confined to food supply contracts?—Yes.

231. You have said that you think your office has been understaffed, and you have made representations to that effect?—Yes.

232. What part of your contract work do you consider occupies the greater share of the time of your staff?—The contracts for general stores form the bulk of the work of the branch.

233. If there were any proposal to transfer the making of contracts to the military districts, what branch of work would give you most relief if transferred?—We could not delegate to the military districts the duty of making contracts for general stores, because we would be buying in detail instead of wholesale. For general stores required for the Army it would be an expensive thing to allow the work to be done by the districts. I should say, in the first place, the difficulty of buying in districts is the question of inspection. You see we have already a very expensive inspection staff and that inspection staff is located at Woolwich, but to allow General Officers to buy general stores in districts without a proper inspection staff would be, I should say, a most inexpedient proceeding.

234. But supposing there were proper arrangements made for inspection?—If proper arrangements for inspection were made it could be done, but there would still be the objection that we are now buying in large quantities, and should have to buy in smaller quantities.

235. This Committee is asked to consider whether the making of contracts should be in whole or part transferred to the military districts, and what I want to ask you is, supposing the Committee were of opinion that it would be desirable to transfer part of the duty to the military districts, which part could be best transferred from your point of view?—I could not answer that off-hand.

236. As I understand you, you think no part could be transferred?—I do not think that any part can be transferred with advantage to the public service, from the point of view of economy.

237. Do you consider that the system now followed in the distribution of the business as regards contracts works well?—Very well I think, and it is on the same lines as all commercial businesses, so far as I have been able to ascertain.

238. We are asked also to consider the question of financial checks and financial control. Can you tell us what financial control is exercised on your department, and how far the Director of Contracts feels the effect in the practical conduct of his business of any financial control that may be exercised?—The financial control, as far as I am concerned, is what I might call of a general character. I am precluded by the Treasury rule, for instance, from increasing the price of a contract if once the contract is entered into.

239. Financial control then touches you very little; but supposing a department asks you to buy so many articles with the money at their disposal, the question of exceeding their vote has nothing to do with you, I presume?—If I knew that the department ordering were giving orders very largely in excess of the amount of money voted, I should bring it under the notice of the Accountant-General.

240. As a rule you buy what you are asked to buy by people with the money?—That is so.

241. (*Sir G. Clarke.*) You do not think it any part of your business then to concern yourself with any financial control that is exercised?—Of course there is a question in my mind, rather an important one, coupled with examination and audit of the bills that come in under contracts that are made by me. All these bills go to the Accountant-General's Branch for examination and audit, and doubtful questions arising out of the contract they have to refer for my opinion. I think myself, the Director of Contracts being the commercial side of the finance branch, that the audit of those bills could be with advantage and with considerable saving of work effected by the contract branch. It would save a certain complication of work, and I could arrange my contract books so that the bills could be checked with the records kept in the contract branch just as well as they are done in the Accountant-General's Branch, I want to provide for a certain elasticity in my branch, as I have always had the minimum amount of staff to work the branch.

242. (*Chairman.*) I think you said you would give us a statement as to the condition of your staff?—Yes, but I am now referring to economy of work which I think would result from having the bills examined and audited in my branch instead of in the Accountant-General's.

243. (*Mr. Gibb.*) Who deals with invoices?—They do not come to me at all.

244. What bills are you now referring to?—All bills for payment under the contracts which I make are sent to the Accountant-General and paid by him. They also go to that branch for audit before payment. My opinion is that these bills could be better examined and passed, and with greater facility in my branch, as I have the papers referring to them, and we have a lot of information as to what should be allowed under a claim made by a contractor. My opinion is that the Director of Contracts, from his knowledge, and the knowledge being fresh in his mind, can better and more rapidly decide upon the claims made than another branch to whom the work is perfectly new.

245. Is not the inspection branch more concerned than the contract branch with questions of that sort; as you have said you practically have nothing to do with the contract after it is made?—I am speaking of the bills that come up for payment.

246. The bills must come up to the War Office for payment and the checking of the bills must be largely dependent upon the deliveries under contract?—The bill before it comes up to this office is certified to by the inspection branch and by the principal Ordnance Officer, both as to the character of the supplies and the amount. That is to say, they have satisfactorily passed inspection and have been received into store—that is certified on the bill before payment is considered. The price is inserted locally. I think the passing of those bills could be better done, and would save a certain amount of labour, if the examination of them were transferred to my branch.

247. What information would you have in your branch that would be more accessible than information in the Accountant-General's branch?—I file all contracts.

248. Does the Accountant-General have to refer to them in your office?—If there is any question of price or a question that arises out of the contract, he deals with them, but he has to refer the matter to me, and liability under every contract can be furnished to the Accountant-General.

249. (*Mr. Mather.*) I understand you consider your department has for a long time past been vastly overtaxed, even before the war, and that you are understaffed as regards men, therefore your duties have been performed more or less under great pressure?—Yes.

250. I also understand that your duties comprise buying of everything ranging from scrubbing brushes to steam engines, and the giving out of contracts for the heaviest guns, and supplying everything that is necessary for the manufacturing departments of the War Office?—That is so.

251. You, yourself, appear to be from the description you have given us, in that very powerful position of buying merchant to the various departments of the War Office. They come to you with their various requirements, and you, not having any technical knowledge necessarily of the articles they require, go into the

Mr. A. Major.

9 Jan. 1901.

Mr. A. Major. markets and seek to buy for them in the best possible way?—That is so.

9 Jan. 1901.

252. When you have to deal with the question of a gun, you, yourself, have no idea as to why that gun has been ordered from a private contractor; it may be an original idea, and liable to alteration during the process of manufacture; but I take it you have no knowledge as regards those points?—I have not that knowledge.

253. I should like to put it to you, looking at the enormous variety of articles with which you have to deal, some of them of a highly complex character, which can only be judged by technical men, and which can only be inspected and finally passed by such men in the respective departments, I should like to ask you whether it would not be for the benefit of the public service and the simplicity of your own duties, that your department should be divided into two parts, and that you should take the control of the whole of the purchases of what may be called store supplies or consumables for the military districts of the country under the control of the General Officers Commanding. If that work were the whole work of your department, do you think it would be for the benefit of the service, and induce to economy and efficiency and prompt deliveries of all the articles required? For instance, if the carriage department, as a whole, were treated as a large manufacturing concern on the same basis that it would be conducted supposing it belonged to a private individual or a private company, should not such a large concern as that, dealing with so many changes and so many difficult questions under its superintendent, supposed to be an eminent man, and who, as a private individual, might be a successful manufacturer, does it not appear to you to be reasonable that such a highly qualified man as the head of this department should have the entire control of the supplies for manufacturing purposes? I know the advantages to be derived from such a system. The work which is delegated to you now by the requisitioning departments, and sent to you from time to time from Woolwich, Pimlico, the Small Arms Factory, and other places, is done in private concerns by very expert men, who follow the work more or less right through to the end, and inspect the work in progress where it may have been ordered from a contractor. That highly technical work seems to me to be quite out of harmony with your position as general provider to the British Army of stores and consumables. Do you think it would be worth while for this Committee to consider the question of delegating the duties connected with what I should call the scientific industry of the War Office to those who are responsible for the manufacture? That is to say, that the duties of the purchasing of such articles as the factories themselves cannot manufacture, should be left to them? That would mean separating entirely from your branch the manufacturing departments and the officers in your branch now employed on that work, and leaving you to deal with supplies and stores such as are usually provided by persons who have no scientific or technical knowledge?—With great deference to your opinion on the question, I think myself that the maintenance of the Director of Contracts as a buyer for all departments is a most useful check upon all consuming departments. You must remember that in a Government department there is not that check of profit and loss which is exercised in private concerns. In regard to economy in purchasing materials, the tendency of the manufacturer is decidedly in favour of giving what I may call monopolies, buying from people who suit him. I will give you an instance. Not very long ago the Waltham Abbey people said that a certain man's cotton waste was the only satisfactory material. That cotton waste for many years was supplied by certain firms, and we had paid 39*l.* a ton for it. The Director of Contracts thought that that was an article for which it was not necessary to give a monopoly, and we brought in competition, and the result was we brought down the price from 39*l.* a ton to 19*l.* In another case, they said that steel points, which are used for fuses, could only be obtained from one firm, and we paid for a great many years 30*s.* per 1,000 for these points. The Director of Contracts considered that there should be competition in a matter of this kind, and we got the price reduced to 5*s.* per 1,000. We then thought that probably if we went to the needle makers we could get them cheaper still. We applied to them, and the consequence is we now buy them at 2*s.* per 1,000. This reduction was achieved as a result of introducing competition. There is a natural

tendency against competition in the manufacturing departments, and I think it is very desirable that there should be a buyer, independent of the manufacturer.

254. Taking the case of Woolwich. If the whole of their buying were placed in their hands, they would have their own buyer, and the duties you now carry out would be exercised by him?—You are now referring to decentralising from the War Office, I presume?

255. Yes. Taking the case of Woolwich Arsenal. The whole mechanical scientific industry of that establishment, right through the departments, is carried on by men who are quite capable, I suppose, to manage their own factories in the same way as I should control the productions of mine. Their books would be equal to my books, the cost would be compared with that of the work done outside. From that point of view you would get concentration in one definite line of production, which means the highest possible efficiency. Such an establishment could not exist, of course, without the vigilance required for the economical production of the range of articles demanded of it by the War Office for the Army. I want to point out to you that it would be possible to divide your department into two branches, each branch to be equipped with the requisite services and knowledge for buying the articles required, one for supplies, stores, and consumables, another for the manufacturing establishments?—I do not know to what extent you wish to make a division of the Director of Contracts branch. Would you propose that the separate branch at Woolwich should be totally independent of the Financial Secretary?

256. On the contrary, they should report the cost of everything they are producing. That is a responsibility which I should like to see acquired by the manufacturing departments in which high technical knowledge is required. To give responsibility to them would appear to be the only way to arrive at complete efficiency as regards production?—I have given you an instance as regards economy in purchasing. If a buyer is to be established in the factories independent of the superintendent, I do not see that it would make any difference as regards the responsibility of the superintendent of the factory.

257. He would buy as in private concerns on the requisition and under the control of the Superintendent, who consults the heads of the departments, so as to secure what they want from the best sources?—If a buyer were established in the factories, the procedure must be identically the same as that adopted by me; he must buy on the requisition of others. There is not a man who has a special knowledge of the whole of the stores required by the manufacturing departments.

258. Do not you think that inspection may be greatly overdone, and become a delusion? Do you not keep records of firms who deliver articles up to time, and make choice of them as being reliable?—We are aware of the manner in which firms fulfil their contracts, and always bear this in mind in placing subsequent orders.

259. No private concern would think of giving orders to one principal producer of a certain article without being fully informed of what was going on in the world. Our exchanges in the large towns form the centre of information concerning raw materials, textile articles, hardware, machinery, and other things. The agent of every firm goes there to see what the world is doing, and to learn as much as he can. I do not think it is at all usual for any manufacturing concern to give orders to the same contractor time after time without ascertaining beforehand that he is still the best man to go to?—What you mean, I take it, is that you would propose that the buyer at Woolwich should follow precisely the same course as I do when going to competition. I do not see the advantage of having a buyer at Woolwich, as you are absolutely relegating him to a village which is thirty miles from London, the great centre of trade, so far as convenience of access is concerned.

260. I am not speaking of the buyer living at Woolwich: he might live anywhere where he could best perform the duties. He would be simply engaged to do a certain class of work, and he would have to go here and there, wherever his work required him.—So far as I understand, you propose that there should be two buyers, one for technical stores and another for general stores.

261. There would be one department to supply general stores, and another to supply the manufac-

turing departments. They would look after the quality of the stores and things supplied to the manufacturing departments, and both be under the control and supervision of those who manage them.—I understand.

262. When the Allocation Committee that you spoke of meets in order to formulate the demands for the year, and settle how you are to get your supplies, are those demands all settled at that time, or do they come in all through the year?—They come in all through the year from the various departments of the War Office, the manufacturing departments, the Army Clothing department, and others.

263. You spoke of a conference taking place; do you at any time confer with the Allocation Committee?—The Allocation Committee is a committee which meets when stores that are required throughout the year are fixed upon; they meet to decide upon the division of orders, between the Ordnance factories and the trade, and that duty is done as soon as the estimates are passed, and the amount of money decided upon.

264. Speaking of inspection, who determines that an inspection of a certain works or firm shall take place? Do you determine it, or is it decided upon by the head of the department for whom the work is being carried out?—If I thought it necessary to make an inspection of work in progress, and if I wanted technical advice on manufacture, I should apply to the Director-General of Ordnance to send a representative to associate with a member of my branch.

265. The inspection, then, is initiated chiefly from your department?—Yes.

266. Is there anyone responsible at Woolwich who would suggest an inspection, and would they know anything about a contract after it had gone out to a firm?—Yes, they have full particulars of a contract immediately.

267. Still, the initiative of having an inspection during progress rests with you, I understand?—The superintendent of the factory, if he wishes to have an inspection, has only to tell the Director-General of Ordnance; but under a recent decision of the Secretary of State, contractors premises are not to be inspected without the concurrence of the contract branch.

268. (*Mr. Gibb.*) But you do not inspect, I understand, unless you have a complaint from the receiving department; you do not initiate sending an inspector?—If I said anything to the contrary, I did not mean to imply that I did not, on my own initiative, send officers to inspect. I think I explained what I had done recently with regard to important orders placed with certain firms.

269. (*Mr. Mather.*) Did you take the initiative in sending inspectors to inspect that work?—I took the initiative, and asked the Director-General of Ordnance to associate members of the manufacturing department with my representative.

270. (*Sir G. Clarke.*) That would be, I suppose, when the complaint reached you that the carriages were not ready?—I am not aware now how it arose, but it was not only with regard to the carriages, but with regard to the progress made with their work generally.

271. (*Chairman.*) But it is not usual, in order to secure the execution of an order, to send down people to inspect that order during its progress?—It would not be usual to inspect them.

272. When you have made a contract, you practically feel then that you have no further responsibility unless a complaint is made?—That is so.

273. (*Mr. Mather.*) Have you anything to do with the work given out to the manufacturing departments of the War Office? For instance, when orders are given to Woolwich to do certain things, do you give those orders?—No, I do not, the extracts are given by the Principal Ordnance Officer.

274. Do you supply all the material they require to execute those orders?—Yes.

275. Do you buy the iron, steel, copper, castings, forgings, and, in fact, every kind of store?—Yes.

276. How long does it take between the time you receive the application and the time the tenders are received? For instance, if a certain quantity of machinery or iron or steel is necessary, how long does it take before they can receive information from you that those materials have been tendered for?—It would be dealt with in the contract branch probably on the same day it was received, but there must be time given to people

to tender. The moment the tenders are received they are sent to the factories, who are asked whether they are prepared to accept this or that tender.

277. You order nothing without the sanction of the factory?—No.

278. (*Sir G. Clarke.*) Is that the invariable rule?—Not quite invariable. We should not send the tenders to the factory if the articles required were not of a technical nature. They require articles of pretty well every kind, and some they require we put out to ordinary tender. When tenders for forgings or parts of carriages, and things of that sort come up, they are always referred to the factories before we accept them. Even in questions of steel, there are different kinds of steel required, and we ask them if they concur in the acceptance of a particular tender. There is a typical case now which shows the advantage of having an independent branch in a Government department to check the material ordered by another branch. There was a small order of five tons of square mild steel, and the factory recommended four or five firms. In the exercise of my discretion I added certain other firms, who had a reputation for supplying this character of steel. When the tenders came in they were referred to the factories, and I asked what firms they recommended us to accept, they took a firm at 2*l.* a ton higher than the lowest of the three firms they had recommended. They took a whole month to consider that point, and when it was referred back to me, I said that, under the circumstances, I could not keep the factories waiting for materials, and I accepted their recommendation, but I pointed out that the decision in the matter was open to serious criticism, and I remarked that as they recommended three firms, I presumed they would take the lowest tender of the three, not the middle one. To that I have not yet received an explanation. I accepted the tender because I did not wish to delay the supply of materials.

279. It may be that when they saw the prices on the tenders they calculated that it was better, perhaps, to accept the higher-priced offer?—That is quite possible.

280. They would surely not do a thing of that sort merely for the sake of paying away money?—Probably not.

281. Have you the power to ask for an explanation as to why they selected that particular tender?—Certainly.

282. And are they bound to give you a reply?—Certainly. (*To Mr. Mather.*) Reverting to that matter and speaking as regards the practice of firms, I rather join issue with you as to our practice of buying being against that followed by commercial firms. Take the firm of Messrs. Vickers and Co., they are a very large firm, and with regard to their works at Erith, I may say that the manager there has not the power to buy a single thing without going to the contract department in Victoria Street, and although I daresay his expenditure of materials comes to half a million a year, he is obliged to come to the contract department in Victoria Street for anything he wants. All the materials are bought for him and are sent to Erith, and he says whether they are what he asked for.

283. The general manager of the works would probably assist the member of the staff at the central office as to the selection of contractors and would sanction what should be bought and would have the whole decision of the article to be obtained?—He goes on precisely the same principle as we do. The manufacturer says what he wants and we go to proper competition; we buy upon that competition, and the factory says whether they get what they ask for or not.

284. (*Mr. Mather.*) Everything is bought through a buyer?—Yes. The purchases are all made by a representative of the directors, and I make purchases for the person who runs the factories, and the person responsible is not the superintendent, but the Secretary of State. The Secretary of State appoints his buyer, and I am his buyer.

285. If the manufacturing department had their buyer, independent of the department that had to do with the supply of stores for the army generally, I take it you would have nothing to do with these technical stores?—I am unable to meet an indefinite proposal. I believe you said the officer proposed need not be at Woolwich and might be in the War Office.

Mr. A. Major.

9 Jan. 1901.

Mr. A. Major.

9 Jan. 1901.

286. The question arose out of a statement which you made in the earlier part of the day that your department was vastly overworked, and it struck me as rather peculiar that you should have the control of these large contracts, involving large sums of money in connexion with purely technical work, and with supplies for the manufacturing and technical departments, together with those ordinary stores with which you have to deal at the present time. It might be possible to have your department for stores separated from that for stores supplied to the manufacturing departments?—I should like to have that proposal before me if the Committee wish to have my views on the subject.

287. (*Sir G. Clarke.*) I take it that none of your staff have any special training as regards technical stores, and that they are not selected on the ground of technical knowledge?—Technical knowledge is a phrase that may be graded from a very narrow to a very wide signification. Do you mean, in asking that question, whether we have a technical knowledge of every trade in the country? If so, I should like you to put the question in that form.

288. I see in your branch you make divisions into groups?—Yes; the branch is divided into trades.

289. In telling off a member to one of the groups, would you take in consideration the trades the group included; for instance, one contains saddlery; would anyone joining that branch have any knowledge of saddlery?—He would not have been brought up to that trade.

290. Would he be a judge of saddles?—I should not like to trust his judgment.

291. As to metals, would any of these people know anything as to metallurgy; would they know anything as to the properties of steel, or of the various metals you buy?—No, they would not.

292. Do contractors, or their representatives, often attend at your office in person?—Continually.

293. What class of question do you settle when conversing with them?—Questions of delay in delivery, or capacity of supply, and all sorts of questions of that kind.

294. Do they ask you for technical information as regards their contracts?—Not often. If they do, we refer them to our technical advisers.

295. To the factories, in fact?—We have the whole technical knowledge of the department at our disposal.

296. You would not deal with that then?—We never attempt to deal with technical questions, although we frequently advise on technical matters.

297. You do not deal with horses and mules, I believe?—No.

298. And you have no supervision over them?—No.

299. Do your contracts include shipping?—No; they are arranged by the Admiralty.

300. And you make no contract arrangements with railways, as I believe that is done by the Quartermaster-General?—We look at the contracts for transport.

301. When a contractor wants to be put on your list, have you, up to the present time, inspected his works?—If it is a particular kind of store that a man asks to supply, we should inspect his works.

302. Would you borrow an inspector from the factories to do that duty?—As far as inspecting the works goes, a member of my branch often does sufficiently well.

303. That would be the duty that your two new experts would perform, would it not?—Primarily.

304. How would those two inspectors be trained—where would they be procured from?—That is not a question I should like to answer.

305. What kind of expert would you like to have if asked to define his qualifications?—It is difficult to say.

306. Are any steps taken to make certain that a contractor is not sub-letting?—We depend upon reports as to that, we do not take steps. Sub-letting is prohibited in the terms of our contract without my consent.

307. Then you could not feel certain in any case that a man is not sub-letting?—We occasionally get reports of sub-letting.

308. Do you also satisfy yourself that you are dealing with a principal and not with a middleman?—Yes. It is very rare indeed for us to deal with middlemen now.

309. Not with regard to timber?—As far as we know, they are all merchants.

310. Do you take steps to ascertain?—Yes. Ours are well known timber merchants.

311. Am I correct in interpreting what you said before, that no statement is kept of the delinquencies of contractors as regards delay on contracts, but that you have full information which would enable you to find out such delinquencies?—We have periodical reports showing the progress of deliveries, and if a contractor is in arrear, we write to him and call his attention to the fact.

312. Do you find that contractors are anxious to get on the War Office list?—Yes, very anxious.

313. Do you think they tender below cost price in order to get on?—I should think those cases would be very rare.

314. Are schedules kept in your office of the prices paid to contractors from time to time?—Before tenders are considered, the last prices are invariably referred to.

315. They would be kept?—It is a matter of ordinary work, the prices last paid are put side by side on the schedule with the prices now tendered.

316. Who prepares those schedules?—They are prepared by my clerks. I divide the consideration of tenders as you see among four rooms, but for the general work of scheduling there is a large room in which the schedules for the other rooms are prepared.

317. Do you think it possible that prices of tenders leak out?—Not from my branch.

318. Do you think it is impossible for them to get out from your branch?—I do not think they do.

319. Of course the knowledge would be in a great many hands?—Yes.

320. The knowledge to the contractors outside of the rates of tender would be exceedingly valuable, would it not?—Some say it is not of very much value, and some say it is. Some say they tender at a price at which they can manufacture the article quite irrespective of other people's prices. There are a great many people at Woolwich who know the prices, and some contractors say they get the information from there.

321. Do you assume that a firm, once on your list, is in a solvent condition unless they are declared bankrupt?—We should not know of any financial difficulties unless the information were published.

322. As regards the contracts for materials for the arsenal, do I understand that you do not make it an invariable rule to take the opinion of the superintendent on each contract?—We should not take his opinion upon things which I buy generally for other services besides his, but we should ask his opinion on special stores.

323. Would you take a contract with a person to whom he objected?—Not on my own responsibility. If there were reasons for going against his judgment, I should submit the matter for the consideration of the Financial Secretary, and I should also take the opinion of the Director-General of Ordnance.

324. Then would it be one of the functions of your office to direct that a trial should be made of a particular contractor against whom an objection had been raised?—We should advise that a trial order should be given to a particular firm where the competition was insufficient.

325. Supposing the firm had been tried three times previously, would you direct that a fourth trial should be made?—I should think not.

326. I gather from your evidence that you have no responsibility with regard to contracts made at out stations, except to review them?—That is so.

327. And you review them after they are made?—They are made under instructions, and the system under which they are generally made, the employment of eligible people, and the care as to the proper amount of competition, are all reviewed in my branch.

328. Does that include coal?—No, the contracts for coal come up to the War Office for acceptance in the first instance; they are not accepted in the districts.

329. Does that delegation in the districts disadvantageously affect markets?—No.

330. So that there has not been any loss of economy by that delegation to districts?—The food supplies always have been purchased in the districts.

331. But the powers of the general officers commanding have been increased recently, have they not?—Yes.

332. Do you find that there has been any loss of economy?—Occasionally; for instance, one of the staff officers at Colchester accepted a contract the other day which resulted in a loss of 200*l.*, and there are a number of small cases of that sort.

333. Would you not admit that in some cases your contracts lead to loss which cannot be helped?—No, I do not think so.

334. If the delegation answers satisfactorily, as regards economy in districts, do not you think that that delegation might work well in the direction to which we have alluded, viz., in the Arsenal?—The circumstances are totally different.

335. I take it that you are afraid of monopolies being brought about?—There is the general objection which I took when I was before the House of Commons Committee on War Office Contracts, and the proposal, as I said before, has not been definitely formulated. If the buyer is to be at Woolwich where the chief mechanical engineer and others are, you would have the buyer, the seller, and the inspector all together, and sometimes the seller must be in contact with the buyer; they are all together in the same ringed fence, and one of the points to which very great importance has been attached has been keeping the inspector and the buyer as far as possible apart.

336. The inspector is quite apart, and would be under the new system?—He would be much nearer to him. That is one point. Then, of course, there are practical difficulties in buying at Woolwich some of the things required. Take copper, for instance; that is, a thing which is tendered for, and the tender comes in at the market price in the morning. Some of the contractors come up and wait for an answer, and if they are successful in getting the contract, they want to close the business on the market before the day is over. If you take the buyer away to Woolwich or elsewhere, there would be the difficulty of getting close market prices for such things.

337. Do you admit that an independent review by the War Office of contracts made locally would suffice to prevent the building up of monopolies?—I think, of course, if the work of reviewing the contracts that are made is to be given to the Director of Contracts, that would be a considerable check; on the other hand, if that is so, what is the advantage that would result from copper or any of these other things being bought by a buyer at Woolwich or Manchester, as compared with its being bought up here?

338. The advantage seems to me that the additional staff and help given to you would be found inadequate, and that any technical strength started under you is bound to grow, and that the work could be better done at Woolwich. The two officers proposed to be added to your branch are to be experts, are they not?—One is to be a business man and the other is to have some knowledge of engineering, the technical knowledge that is comprised in that may be of a very limited character. I understood you to say that the Director of Contracts should have a technical knowledge of the stores he buys, and should also have special and large manufacturing experience. I can only say as to that that it is the only opinion I have heard to that effect. I can give you an opinion of the very highest authority which says absolutely that technical knowledge on the part of the Director of Contracts is impossible, on account of the enormous variety of stores that he buys, and next, that it is not necessary that he should have it. I should like to know what advantage technical knowledge will be to the buyer at Woolwich, as he must have a specification to go to competition, and that must be prepared by the manufacturers, and when the material comes in the buyer cannot possibly inspect it.

339. If the buyer at Woolwich acted with the factories and possessed judgment of the articles to be bought, he could find out what was going on and could send an inspector at a moment's notice if necessary?—I have that power now.

340. Your evidence is that you have to go to the Director-General of Ordnance, and that you have to make up a committee?—No, I go to him and say: I

want the Chief Inspector of Stores to look after the cordite. This official is available for the benefit of the public service, and he comes as a matter of course. The whole technical knowledge of the departments is available for the benefit of the public service at my request.

341. (*Mr. Gibb.*) I believe you say you can buy articles that you do not know anything about just as well as those you do know about?—Yes, certainly, my knowledge is as regards sources of supply.

342. (*Mr. Mather.*) You act as a merchant, I take it?—Yes, but I do not sell; I only buy. The buyer at Messrs. Vickers may not know one end of a gun from another, but he knows where to buy.

343. (*Sir George Clarke.*) I think you said your impressions of market prices were based upon the tenders sent to you?—Market prices come in and we record them every day, and we always have the book before us when accepting tenders.

344. You do not know the prices at which private firms are purchasing the materials, do you?—We could not find that out unless we asked them, but where one has a large competition for the majority of things, that information seems to me to be scarcely required. I think it is the general opinion among contractors, and it is certainly my opinion, that nobody buys as cheaply as we do.

345. (*Colonel Miles.*) Are the local contracts made in districts finally accepted there?—Yes.

346. Supposing anything was wrong, such as the lowest tender not being accepted?—It cannot be corrected, we only call attention to errors, some of which consist in accepting ineligible contractors.

347. Those that are on the War Office list of ineligible contractors?—Yes, we always notify their names to the districts, but sometimes they overlook that.

348. (*Sir Charles Welby.*) I suppose you notify to the General Officers Commanding that when ordering meat they should not employ a certain contractor again?—Yes.

349. We have heard a good deal about your relations with the Director-General of Ordnance, but he is very far from being the only requisitioning authority, is he not?—Yes.

350. Will you tell us broadly what are the requisitioning authorities and what are the articles they requisition?—The Director-General of Ordnance provides all warlike and general stores, all articles of equipment and clothing. The Quartermaster-General is responsible for food supplies, and the Inspector-General of Fortifications for works and buildings.

351. Do you make any contracts for transport by railway?—They come before us for concurrence.

352. Do you deal with sea transport at all, or is that done entirely by the Admiralty?—We do not make any contracts, but during this war we have had some exceptional cases of making arrangements for sea transport.

353. (*Mr. Gibb.*) Who sends you the transport contracts?—The Quartermaster-General's Department.

354. (*Colonel Miles.*) Practically, I believe, there are no contracts with the railways?—Very few; they are agreements which come under the view of the Director of Contracts.

355. (*Sir Charles Welby.*) What other contracts have you?—Those of the Inspector-General of Fortifications as regards buildings and fortifications.

356. Have you any other requisitioning authorities?—No, only those three heads of departments I have mentioned.

357. Do you do any buying for departments outside the War Office?—Yes, I buy all warlike stores for the Admiralty, and a certain amount of clothing for the Post Office. I also buy for the Irish Constabulary, and I buy all warlike stores for the India Office, and for the different colonies; so that the work of my department is of a varied and extensive character.

358. You buy only warlike stores for the Admiralty. All other contracts they make for themselves, I believe?—That is so.

359. (*Chairman.*) I want to get this point quite clear; when you make a contract, as a rule, you would not hear any more about it unless a complaint were made respecting it?—That is so.

Mr. A. Major.

9 Jan. 1901.

Mr. A. Major. 360. No report would be made to you at the time as to the progress made with the order?—I should have no further information, nor is it necessary, because I go on the presumption that contracts are satisfactorily executed unless I have a report to the contrary. It

is only a small minority that are unsatisfactorily executed, and those I have a report about.

361. (*Mr. Gibb.*) Supposing there were delay, but not excessive delay, would you hear about that?—No, there is a little toleration given.

The witness withdrew.

Gen. Sir H. Brackenbury, G.C.B., G.C.S.I.

General Sir H. BRACKENBURY, G.C.B., G.C.S.I., examined.

362. (*Chairman.*) You hold the position, I believe, of Director-General of Ordnance?—Yes.

363. How long have you held that position?—Since 6th February 1899.

364. We have had the advantage this morning of having had a tolerably long and able explanation from Mr. Major, the Director of Contracts, of the system under which contracts are now made and worked; and, incidentally, a good deal has been said, not only in explanation, but in defence of the existing system. But we understand that an opinion is entertained in other quarters that the system might be modified in some important particulars, more especially in the direction of placing the officials of the manufacturing departments who have technical knowledge, if not in the position of actually making their own purchases, at any rate of putting them in closer contact with the contractors, so that they shall be able themselves to deal with the contractors instead of treating through an intermediary. I think, therefore, the committee would be very much obliged to you if you could give us your views as to how the existing system could, with advantage to the public, be modified, and if you consider that it is susceptible of any beneficial modification?—I think that the existing system might with distinct advantage be improved. As regards the manufacturing departments, I would say that the manufacturing departments form only a very small portion of the work that I have to do with the Director of Contracts. I am responsible, under the Order in Council of the 7th March 1899, for supplying the Army with warlike stores and equipment and clothing. The amount of money for which I am responsible this year in order to carry out those duties is about 19,000,000*l.* sterling. The vote including the supplementary estimate for clothing this year is 5,530,000*l.*, and the vote for warlike stores is 13,200,000*l.*, these together making 18,730,000*l.* And, in addition to that, there is the vote for the Ordnance Factories of 204,000*l.*, so that altogether it comes to nearly 19,000,000*l.* The whole of the money expended in the manufacturing departments is, I think, only about 3,000,000*l.*, so that 16,000,000*l.* of that money is not for the manufacturing departments. As I have said, under the Order in Council to which I see your committee is referred, the Director-General of Ordnance is charged with supplying the Army with warlike stores and equipment and clothing. There is no such official as the Director of Contracts mentioned in the Order in Council, and the only reference to contracts is where it says: "Whereas a Financial Secretary may from time to time be appointed by the Secretary of State, and his duties shall be assigned to him by Order in Council," and then this Order in Council goes on to say that "the Financial Secretary shall be charged with the financial control of the manufacturing departments of the Army, and with controlling and recording all contracts for Army services." That is the only mention of contracts in the Order in Council. The Director-General of Ordnance is charged with supplying the Army with certain things, and it is to him that the Secretary of State looks that the Army shall get what it requires, and it is to him that the Army looks, and I contend that his responsibility is really destroyed by the fact that the Director-General of Ordnance has not the power himself to obtain the things that he wants. He is obliged to go to somebody else outside his own department with his demand, and he is entirely in the hands of other persons as to whether he gets those things or not. The Director of Contracts has no responsibility to the Army; his duties are defined by War Office Memorandum, No. 316, which lays down that the head of each military department shall initiate demands for services, and the Director of Contracts shall make the purchases. I can only say that I do not think that system works well. The difficulties that we have experienced in the past year have been very great, and there has been constant friction between my department and the department of the Director of Contracts.

He merely purchases what the supply departments demand. Of course I do not say that this is Mr. Major's fault in any way; it is the fault of the system. The tendency is to place contracts anywhere, with whatever firms will take the work, and I do not think proper regard is made to the ability of the firms to carry out their contracts at all times, but most especially in times of war. The most important element of all to us who are charged with the supply of the Army is the element of time; it is of the most vital importance that we should be able to know with certainty whether we can or cannot obtain the stores that we want, and the time at which we can obtain them. The element of time seems to me to be altogether too much disregarded in the contract branch. In fact, when one contractor gave evidence before Sir Francis Mowatt's Committee recently he said, "I never consider time of any importance in the War Office contracts." That is absolutely fatal to the supply department. If you will consider what the responsibility is with which I am charged, supplying the whole army, all over the world, with everything that it wants except its food, forage and transport, and in a war such as this war in South Africa where we have had a quarter of a million of men in the field, you will see it is of vital importance that we should have at all times all that is required to keep that army going, and I do not think myself that any system under which the Director-General of Ordnance is not responsible for obtaining the supplies which he has to give to the Army, can be a right system. It seems to me that the man who makes the purchase should be the servant of the man responsible for supplying the Army, and not the master of that man, a position which the Director of Contracts seems inclined to take up.

365. Am I to understand that your complaint is not so much with the actual system, as to the way in which it is worked, first, that the contract department do not attach sufficient importance to that all-important element of time, and, secondly, that the Director of Contracts, instead of regarding himself, as it were, the agent of the Director-General of Ordnance regards himself, if not as the master, at any rate, as a co-equal?—Quite so. I must say, too, that I consider that the Director of Contracts is not sufficiently inclined to take strong measures with contractors who are in default. I think, too, that it is a wrong system that the Director of Contracts should be directly under a parliamentary official upon whom political pressure may be brought to bear.

366. On the other hand, if the Director of Contracts was to be placed practically in the position of the agent of the Director-General of Ordnance, would it not be possible that there might be some danger of insufficient attention being paid to economy? As it is now, it is contended that the Director of Contracts is the central office that keeps in touch with all sources of supply, and is generally hunting about for new sources of supply. Accordingly, he is able to point out in a decisive way to the Director-General of Ordnance that there is this and that new source of supply, which may work as cheaply or more cheaply than old sources, and at the same time as efficiently as the old sources of supply. The purchasing department directs attention to the quarter from which the article might be procured?—In the first place, I should say, as regards economy, that, I think, the present system does not lead to economy. The Director-General of Ordnance has the administration of Votes 8 and 9, and it is directly in his interests to get the greatest amount of stores that he can possibly get for the money that has been voted to him by Parliament. The Director of Contracts has absolutely no interest of that kind at all. I have to get the stores for the Government, and I am mainly interested in getting them cheaply, provided they are good. First of all they must be sufficiently good, and the next thing is that I should get them cheaply because I have only a certain amount of money to spend.

367. (*Mr. Gibb.*) Although he is not interested in economy, do you say that he is extravagant, or that he attaches too much importance to cheapness?—Yes, I think he does attach too much importance to cheapness. It is a rule that the lowest tender should always be accepted, and I believe, as a rule, it is accepted. As regards hunting about for new sources of supply, I have written minute after minute within the last year or more, saying that I considered it perfectly impossible that we could ever tap the sources of supply of this country properly, as long as the Director of Contracts' staff consists only of men who sit on stools in this office. I put forward a proposal that the Director of Contracts should be given travelling inspectors who should have a double duty, first, to go about and seek for new sources of supply, and, secondly, to visit the works of contractors who are in arrear, and find out the causes of their being in arrear, so that if they were found to be taking other orders in preference to ours, or delaying to supply us from any cause other than *force majeure*, we might compel them to proceed with our order. I have constantly to send my own people about to find new sources of supply; we wanted certain parts of fuses, which had always been made in the Ordnance factories, and one of our assistant mechanical engineers in the Ordnance factories went all over the North of England visiting all sorts of cycle companies, and he found out a number of new sources of supply for us which the Director of Contracts had never attempted to find out. In the same way with clothing, my chief Ordnance officer sent an inspector to find out new sources of supply, and he was successful.

368. (*Chairman.*) We understand that there is a proposal now put forward, and it is likely to expedite the work of the Director of Contracts, for two travelling inspectors; we understand that they are not so much for finding out new sources of supply as to see to the execution of orders?—My proposal was that they should have both duties, as will be seen by my minute on the papers dated 5th November, and addressed to the Permanent Under Secretary of State.

369. How far do you consider that it is part of your duty to find out new sources of supply? You told us you sent your inspectors to do it; do you consider it comes properly within your sphere?—It does not, but I have done it in order to advance the public interest.

370. Then I gather from your remarks that you would not be in favour of suppressing the Director of Contracts, but rather of altering his relations to yourself, and putting him, so to speak, in the position of a central information bureau at your elbow?—I may say it is not only for me that the Director of Contracts makes contracts; he makes contracts for the Quartermaster-General, who is charged with supplying the Army with food, forage, fuel, and light; and for the Inspector-General of Fortifications, and for the Navy. As far as I am personally concerned, I do not know what the Quartermaster-General's views are, but my own idea would be that the contract branch should be broken up, and that the portion of it which deals with contracts for warlike stores should be put under me.

371. In the shape of an information bureau?—No, as a section of my office, and it should be one of my duties to make contracts for the stores which I have to supply.

372. But it would be a bureau in your office?—Yes, and under my orders, and I should put another branch of it in the Quartermaster-General's and another branch of it in the Inspector-General of Fortifications, and if it were thought necessary to have a Director of Contracts at the elbow of the Financial Secretary to review the contracts which we make, that might be a good thing.

373. I gathered that you would like to detach the Director of Contracts from the Financial Secretary altogether?—I should like to detach that portion of his branch which makes contracts for me from the Financial Secretary altogether, and have it under myself. I should like to place the deputy Director-General of Ordnance in charge of a contract branch in my own office.

374. (*Sir George Clarke.*) Would you propose to take over the work of making contracts for the Admiralty?—I do not see why the Admiralty should not make their own contracts.

375. What do you propose with regard to the Quartermaster-General's department?—He might

make his own, and, in fact, he does make a large number of his own contracts now locally.

376. (*Sir Charles Welby.*) If the Admiralty were to make their own contracts for ordnance, would not there be a danger of the two competing in the market?—I think that is a bugbear, and I do not think there would be any danger. The Director of Naval Ordnance and myself could consult over these things, and we could come to an arrangement. I have no doubt we could avoid coming into competition, and should be able to get things in reasonable time.

377. (*Chairman.*) If you dealt with a contractor yourself, I understand you think you would be more rigorous with regard to penalties?—I am quite sure I should. I am responsible for supplying the Army, and I am responsible for expending the money and receiving the stores. I put forward demands for stores, but I never know when I am going to receive them. I am responsible for everything connected with warlike material, except one thing, making the purchases, and that is the most important part of the whole.

378. Briefly speaking, then, you would decentralise the contract branch, taking part of it under your own control?—Yes. I would take that part of it which deals with my stores into my own office, and put it under my own control.

379. Do you think that the interests of economy could be sufficiently consulted by the very direct and obvious interest which the Director-General of Ordnance would have in purchasing the necessary materials?—I have an interest in economy that no one else has. We speak of the Director of Contracts, but you must remember that he is only the head of the branch, and that the bulk of the work in it is done by his assistants. Under my proposal that portion of the branch which deals with my class of stores would come under me.

380. Do you think the Director-General of Ordnance would be overweighted?—I do not think he would at all. I think there would be less work in my office than now, when there are endless references backwards and forwards between my department and the contract branch, and endless complaints and friction.

381. (*Sir Charles Welby.*) Do you propose to establish a special branch for your contract work at Woolwich to purchase raw materials for the manufacturing departments?—That is a thing which I have not gone into. The proposal came from the manufacturing departments the other day, and I sent it to the Director of Contracts, and asked for his views. He wrote back, and wished to know whether I recommended it or not. I said I would not pass an opinion until I had heard both sides of the question.

382. (*Chairman.*) In the event of a part of the contract branch being handed over to you, you would not necessarily put that branch at Woolwich, I suppose?—Not necessarily, but I should probably let the Woolwich people do part of it themselves.

383. That would come under your responsibility?—Yes, certainly, and in the same way I should endeavour to make some local contracts, as at present we do not tap a number of small sources of supply.

384. What particular class of contracts do you refer to when you say that?—All kinds of general stores, such as harness, leather, and things of that sort.

385. As regards the decentralisation, would not that mean the breaking up of large orders into small orders; and is not this consideration to be borne in mind, that in the one case you buy in large quantities, and in the other you buy in detail in various places?—In that case one would give them a guiding price.

386. Otherwise you would fall back into wholesale buying?—Yes, it would only be in small things that I should decentralise. At Woolwich purchases for the ordnance factories are purely for manufacturing work; they are purchases of raw material. I have not, however, heard enough about the question yet; I have not heard the question argued or discussed sufficiently for me to say whether it would be desirable to make those contracts locally or not.

387. It has been suggested as regards the manufacturing departments, that if they buy themselves, direct, there would be this danger, that the head of the manufacturing department, who very naturally and obviously looks more to the excellence of the article he requires than anything else, would probably go to the firms from whom he could get the best article, and,

*Gen. Sir H.
Brackenbury

9 Jan. 1901.

while a private manufacturer has to look at profit and loss, he would have no such consideration, and would be inclined to deal with any particular firm who supplied him with excellent articles, and in that way the price might be raised. By this favoured supplier, he might, perhaps, fail to get a reduction of price, if a reduction of price took place. Do you think any danger of that kind would be obviated sufficiently by the interest of the Director-General of Ordnance in economy, in getting as much as he can for his money?—I certainly think it may be argued that the head of the manufacturing department would have that tendency, and I daresay there would be that tendency.

388. He is not controlled by considerations of profit and loss?—On the other hand, the Director of Contracts is very much controlled by this question of profit and loss; he is inclined to give contracts to men who do not supply the things at all, or if they do, supply them so much in arrear of the time as to cause serious inconvenience, and injury to the public service results from delay. Or they supply them in such bad quality that they will not pass inspection. I contend that the head of a department, who is responsible for supplying the stores in sufficient quantity, and, secondly, of the right quality, and who is responsible for getting as much as he can for the money that is given to him, has a greater interest than anybody else can have by any possible chance.

389. Are you of opinion that if you yourself were to deal with the contractors who were in arrear or unsatisfactory, and if you could deal with them directly, instead of through the intermediary of the Director of Contracts, you could enforce severer penalties than are at present enforced, and thereby arrive at a higher standard and more prompt satisfaction of your orders?—I am distinctly of that opinion. I think, with regard to present contracts, the penalty clauses are utterly futile. Contracts are made, for instance, with great gunmaking firms which do not sufficiently specify the dates at which deliveries should be made.

390. That is the fault of the purchasing department, who draws up the specification, is it not?—No. The dates at which the things should be delivered are not always given by them.

391. Would not the requisitioning department give the Director of Contracts modified dates?—We do not put dates on the requisitions as a rule. We simply show that we want the articles as fast as possible, and then the contract is made, showing date of completion, perhaps October 1900. It frequently does not say so many in June, so many in July, and so on. Then there is the penalty clause in the contract to the effect that if they do not deliver to date they are subject to a penalty of 2½ per cent. It is the same fine whether they are a week or five years in arrear, and with these firms it has never yet been enforced.

392. (Sir George Clarke.) The Director of Contracts told us that in a single year the cases of fines were upwards of one hundred?—Out of thousands of contracts.

393. (Chairman.) I suppose one of the difficulties of enforcing a fine, obviously in the case of the great gun-making firms, is that there is no other outside firm that you could find for that particular work in this country?—That question is before the Secretary of State now, and I have proposed that there should be cumulative penalty clauses in the contracts.

394. As there are in many business firms?—Yes.

395. Do I understand you clearly that when you send in a requisition for guns, carriages, or whatever it may be, the requisition does not state that the articles are wanted at certain dates, and that you leave that for the Director of Contracts to put in without consultation with you?—In many cases it is no use putting in dates. Supposing I want 28 9·2-in. guns, I may say, generally, that I want one-third of the order in 1900, one-third in 1901, and the remaining third in 1902. Then the firm will send in a tender stating when they are prepared to deliver. There is scarcely a single case in which these great firms have kept to their dates, and the only penalty is, in my opinion, a futile one. If we had cumulative penalties, the firms would not then tender for dates which they must know they cannot keep, and we should know where we were in regard to getting these things. We could then arrange to get ammunition, mountings, and so on, to meet the gun.

396. You are practically in a false paradise, I suppose?—I am; but it is not quite such a false paradise as you might imagine, as we have learnt from experience that it is useless to take any notice of the dates.

397. These firms, I presume, put on a date which they think will please you, but to which they have no intention of adhering, because they know no penalty will be enforced?—Yes, that is so, and the firms who supply us with projectiles have started the same thing.

398. In case of loss, except in special articles, you can buy in default and charge the difference?—I suppose, but that is the greatest farce possible. We ask the Director of Contracts to buy in default and he goes to some firm who charge a higher price, and they are probably in arrear with their own contract. We have a case in which the Director of Contracts gave a contract to firm "A," they did not deliver, and he gave a contract in default at a higher price to firm "B," they did not deliver, and then at a still higher price he gave the contract in default of "B" to firm "A," which was the original firm in default.

399. Do you think if you had charge of the contracts that you really would be in a position to enforce penalties upon the great makers of special articles like guns?—I think that the advantage of putting cumulative penalties into the contracts and enforcing them, would be that the firms would then tender for dates at which they could really deliver, and it would be to their interest to deliver to those dates, whereas now they have no interest in delivering to dates for which they tender, and they make their tenders recklessly and quite regardless as to whether they can deliver.

400. Supposing a firm found they had made a miscalculation, and were in arrear, do you think you could enforce the penalty?—In that case they would come to me and state their case, and they would say we have made a miscalculation; we thought we could keep this date, and we find now we cannot, and we ask you to modify the date at which we undertook to deliver. I should say I will modify the date, but I shall reduce the price. We have no hold on contractors by the present system whatever; they are reckless as to the dates for which they tender, and as to the promises they make, and they have no interest in delivering to date. Besides this there are no means of punishing them adequately if they utterly fail.

401. You are referring particularly to people who supply special articles?—Nearly all who supply us get into arrear; there is scarcely anything we have that is not behind time. The people making tents for us, for instance, put us in terrible difficulties, although it is a simple matter of making up the tents, as we buy the duck and give it to the people to make up.

402. (Sir Charles Welby.) Is there any reason why the contracts branch, as at present constituted, should not enforce these cumulative penalties and administer the system just as rigorously?—They have no interest in doing it, the Director of Contracts has no interest in the thing; he is not charged with supplying the Army, nor has he to administer any votes. He is constantly seeing the contractors, and he and his staff like to make it as pleasant as they can for them. It is only natural that he should be on as pleasant terms with his contractors as possible. If the contractors come and say that our inspection is so severe that they cannot get their things through, he talks to them, and they, at all events, go away with the impression that he sympathises with them, and we are afterwards told that our inspection is impossible, and that our specifications are too severe. We find that people tender to a specification which is laid down in black and white, and then deliver such bad stuff that we cannot take it, but instead of getting support, which I consider a department like mine should have, from the Director of Contracts, the tendency is to sympathise with the contractor. I am perfectly aware that the Director of Contracts will say that this is not the case, but I assert that it is.

403. (Chairman.) I believe the inspecting staff, which inspects articles when delivered, is under you?—Yes. I am responsible for inspection of all stores, whether supplied by the manufacturing departments, or by a contractor.

404. That inspection staff is kept quite distinct, is it not?—Absolutely distinct, they have no other duties. The chief inspector of each kind of stores is directly under the Director-General of Ordnance, and reports

direct to him. There is a chief inspector for each class of warlike stores, one for guns, ammunition, and carriages, there is one for general stores, one for range finders; there is a chief inspector for clothing at Pimlico. We have bought five millions' worth of clothing this year, and he is responsible to me for the inspection of that, as each of these inspectors is for their respective departments. I am responsible not only for supplying goods in sufficient quantity, but for supplying them of proper quality.

405. I believe the question of patterns of clothing does not concern you, but have you any voice in the matter?—No. The Adjutant-General is responsible for that.

406. Would you advise if a pattern were very difficult to execute?—If a pattern of coat which was exceedingly difficult to manufacture was put forward it would go to the Chief Ordnance Officer in charge of the Clothing Department, who would write to me and say that he expected great difficulty in getting a supply of the particular article. I should then put that before the Adjutant-General, and perhaps tell him that it would be very costly, but the decision would rest with him. The Adjutant-General then, knowing the cost of the coat, and having information of that sort before him might still say I want the coat, and the papers would then go before the Accountant-General. I should simply consider it my duty to say "For financial concurrence." The financial people see all these papers, and it would probably in such a case be reported to the Secretary of State, who would say whether the new pattern should be adopted or not.

407. (*Sir Charles Welby.*) Have you any observations to make regarding the system by which the Adjutant-General has charge of the patterns of clothing while you have charge of the patterns of almost everything else?—The Adjutant-General deals with the personnel of the Army. He has recruiting under him.

408. (*Chairman.*) And patterns have an effect on recruiting?—Yes. I have no observations to make about the system; in fact, I am very glad not to have the unpleasant duty of settling patterns of clothing. I should, however, certainly think it my duty to represent to the Adjutant-General if a new pattern were difficult of manufacture, or if it were going to cost a lot of money. On more than one occasion I have put forward minutes saying that a certain change in pattern would cost so much, but if the Adjutant-General presses for the change, and the Financial Department agrees to the expense being incurred, my duty is merely to go on with the order.

409. (*Mr. Gibb.*) I understand you have at present the duty of supplying and inspecting all stores, and your suggestion is that you should, in addition, have the duty of buying the stores?—Yes.

410. Now, you have given us a description of the position of the Director of Contracts rather different from the impression the Director of Contracts himself gave us. He was asked whether his duty was simply to supply in accordance with requisitions made, and he said he considered that was his sole duty. He had nothing to say as regards quantity, quality, pattern, time of delivery, or anything else?—That is so.

411. He said that the requisitioning department settled all these things?—Yes, except time of delivery. We cannot settle that because we do not know.

412. But, so far as they can be settled by any department of the War Office, they are settled, not by the contract department, but by the requisitioning department?—We send to the Director of Contracts what is called a demand, and that demand is for certain articles which are scheduled, and the Director of Contracts has specifications for all the different articles which are settled by my department.

413. Then, so far as these things are concerned, he does appear to be very distinctly the servant of the other departments, having no independent voice as regards any of those matters?—He is not in any way the servant. When he has received a demand he can do what he likes, and sometimes he does not place a contract until some time after he has received the demand.

414. He told us that there were no delays between the date of the contract department receiving the requisition and the date of securing the contract. Do you think that there are these delays in the contracts branch?—I really can scarcely say. I should be

obliged if this Committee would call two of the chief officers under me who could give evidence in detail on these points, and who put forward the demands. The Principal Ordnance Officer at Woolwich puts forward demands for all kinds of stores, and he keeps all records and details connected with contracts. The Chief Ordnance Officer at Pimlico is in charge of the clothing department, and could give you all detail as regards clothing. In fact, these officers will be able to give evidence in any detail which you may require.

415. Would you rather not enter into that question of delay as regards contracts?—I am afraid I could not give you evidence on that so well as they could.

416. Perhaps you could tell us, generally, whether you have any knowledge of complaints made by your department to the contract department of delays between the date of requisition and the date of placing the contract?—Yes, I have known such complaints.

417. I suppose you would agree with me that there is a marked distinction between delay between these dates and delay on the part of the contractor in carrying out his contract?—Certainly.

418. I suppose it is the duty of the requisitioning department to see that a contractor performs his contract properly, and that delivery is in accordance with contract?—Yes, so far as delivery of the right quantity and the right quality of the goods are concerned, but not in any other sense.

419. Do you ever specify time of delivery in your requisitions?—Yes, we do.

420. Is it the usual practice to specify time of delivery, or not?—I am afraid I can hardly tell you, but the two officers to whom I have referred, who send in the demands, will be able to tell you exactly. I may say many of our demands are for the earliest possible delivery.

421. No doubt in special orders it is the practice just as much in the War Office as in ordinary businesses to leave to contractors the proposal of the date of delivery?—I think that is the general course.

422. When you requisition certain stores, and the Director of Contracts gets in the tender bearing upon it, we will assume that it contains the proposed dates of delivery; does he consult you as to the dates of delivery?—In some cases he comes to us, but not as a rule, as it would not be of much use coming to us as to dates of delivery. The firms tender and say we will deliver on certain proposed dates. We assume that this is the earliest date on which the firm can deliver. Of course, if it were absolutely useless to have the things on so late a date, I should say we will not take this contract at all. During the past year we have sometimes wanted things very quickly, and time has been a great object, but, as a rule, contracts are not referred to us as regards the dates of delivery, they are referred in a certain number of cases as to which of several tenders shall be accepted.

423. If you, as the head of the department responsible for the supply, had any distinct opinion on the question of date of delivery; would you not put that into your requisition, or would you not ask the Director of Contracts to prescribe?—We should put it in the requisition if there were any special reason for getting a special thing at an exact date, but, as a rule, the contracts made we want at the earliest possible delivery, and then firms tender, and name dates for delivery.

424. Do you state that yourself on the requisitions?—Yes.

425. When that is stated, does the Director of Contracts communicate with you afterwards as to the dates on which the firms can deliver?—No. I do not think he does.

426. Do not you think it would be desirable that the Director of Contracts should communicate with you, the requisitioning department, as to the dates on which he contracts for delivery?—Yes, perhaps it would.

427. You requisition certain stores, and the date is fixed for delivery; do not you think it would be an advantage for you to know that date?—The Principal Ordnance Officer or Chief Ordnance Officer for Clothing does know, after the contract is made.

428. Your proposal, as I understand it, is designed to give you a better knowledge of when you can really expect to get the stores you ask for?—If the contracts were under me, I should take steps to make the firms so suffer if they did not deliver to the dates named,

*Gen. Sir H.
Brackenbury,
G.C.B.,
G.C.S.I.*

9 Jan. 1901.

Gen. Sir H. Brackenbury, G.C.B., G.C.S.I.

9 Jan. 1901.

that they would afterwards name dates to which they could deliver. Dates have become a farce.

429. That is a different question as to what steps should be taken to secure execution of contract, but as to the mere question of knowing when the contractors will undertake delivery, you said that you would have a better control over them if you were to do the buying. I would like you to explain whether you have not exactly the same control of that at present through the Director of Contracts, by requisitioning a particular date for delivery, or by arrangement that he will communicate with you when he has ascertained the earliest practical date for delivery?—Supposing I requisition for things to be delivered by a certain date, and the Director of Contracts puts them out to contract, and the tenders are received for delivery about that date. They tender for delivery at the date I have named, but, perhaps, I may not be any further advanced than I should have been if I had not named a date at all. In 99 cases out of 100, contractors will not deliver to the date they have tendered for.

430. Supposing the whole matter were under your own control, how would you get further as regards fixing the dates for delivery, quite apart from the question of the fulfilment by the contractor of the stipulation made; is it not within your own control now?—I can fix a date, and say that I want certain articles delivered on that day, but I cannot ensure getting them. If we were to ask for delivery the day after to-morrow for 10,000 tons of a certain material, there would be people who would tender to deliver, but what further advanced should we be? They perhaps would deliver six or nine month's hence.

431. Are you of opinion that the Director of Contracts does specify dates of delivery that cannot be practically adhered to?—I think the more general system is not to notify special dates at all, but ask what is the earliest date at which delivery can be undertaken. At present contractors tender perfectly recklessly as to dates, because we have no penalty clauses worth speaking of.

432. Your main complaint of the system is that the dates in the contracts are not properly followed nor adhered to?—Yes. I think that there is a bad system of contract.

433. Whoever made the contract would have to deal with the difficulty, would he not?—Certainly.

434. As regards the steps taken by the contract department for securing delivery according to contract time, you think that if you had control you would be able to get stores more quickly than the contract department does now?—I think I should be able to get them more quickly, and certainly more punctually as regards the date tendered for.

435. I rather gathered that as regards the dates filled in the contracts, that is now entirely within your control as much as it would be if you were the buyer, because you can, when you think it right to do so, requisition for a certain date, or you can leave it to the Director of Contracts to permit the contractors to fix their own dates; what other alternative would be possible if you had to make up the contract?—I am afraid I do not make myself clearly understood. If I fix a date the contractor tenders to that date, but in 99 cases out of 100 he does not keep to it; it is, therefore, useless for me to fix a date beforehand. The more practical system is, if I want certain stores as quickly as possible, to ask for tenders, at the same time telling the firms that the goods are wanted quickly, and asking them to tender and name a date when they can deliver. The Director of Contracts would probably put those tenders before me. And we should say:—This firm say they can do it in July and that firm in October; the firm tendering for July is a good firm, and we must take their offer. When July comes they do not deliver, and the reason of that is that it is not worth their while to deliver, and they look upon the date clause as a perfect farce. Any date they please they stick in, and they do not care whether they keep to it or not.

436. Supposing you were the buying authority, and the date was fixed by the contractor, just as in the present system, I understand you think you would then be able to get contractors to perform their contracts more punctually than they do now?—Because I should make it to their interest, which it is not now, for them to complete their contracts punctually, and I should make them suffer if they were unpunctual.

437. Have you ever had to deal with contractors in this way of getting them to supply according to contract?—I made a contract with a foreign firm for the delivery of a very large quantity of artillery material.

438. I meant as a general experience of getting deliveries?—I will give you one instance of a case where I made a direct contract, under the authority of the Secretary of State, with a foreign firm. I made it through an intermediary, for the delivery of a very large quantity of artillery material. The dates originally named by the firm were considerably in advance of anything that the English firms could do. I put in considerable penalty clauses, and when the time came for delivery, the firm said, We cannot deliver at the dates named, and we shall be much obliged to you if you will go over our works and satisfy yourselves that we are doing no other work, and that we are using every special effort to carry out your contract, but we made a mistake in saying we could deliver at that date, and we should be glad to know what you will do. We visited their works and satisfied ourselves that they had done everything they could to carry out the work. The mistake they made was that they named a date too early, so we said we will make a new contract and cancel the old one, we will name new dates to which your firm can deliver, and there will be an additional 1,000*l.* penalty for every unit that is behind its time. That was a fine of 12½ per cent., and we are in a position to enforce it.

439. (*Chairman.*) Generally speaking, have you had any large general experience of getting contracts carried out?—I have had a fair amount of experience of that kind in India.

440. The difficulty which you have described, and which is a real one, is a difficulty experienced in every large business undertaking, and not only in the War Office, the difficulty of getting things delivered at the times fixed in the contract?—No doubt.

441. (*Mr. Gibb.*) I believe the alteration that you would make, if you had the control, would be the imposition of higher penalties?—Yes, the imposition of cumulative penalties.

442. If that is the correct system of securing better deliveries, why is it not adopted now? I suppose the Director of Contracts can adopt it if the Secretary of State considers it is right?—That I cannot say.

443. The Director of Contracts told us that after he had made a contract his functions practically ceased, and that the inspection during manufacture was in the Inspecting Department, and not in the Contract Department?—Yes, he has nothing to do with inspection.

444. I think he carried that to the point of inspection with a view to seeing progress as well as ordinary inspection?—No. He objects in the strongest manner to my sending anyone to inspect during progress.

445. (*Chairman.*) I think we understood from him that occasionally he asked you to send down some inspector to act with a representative of his own to look into the progress of an order?—There has been a case recently in which we have sent our people together to the great gunmaking firms.

446. It is not the general practice, I believe, for him to send down during the execution of an order to see how it is getting on?—I do not think it is the usual practice.

447. Is it a fact that you do so?—I am not allowed to do so.

448. (*Mr. Gibb.*) Is there any limitation on the power of your Inspection Department?—My Inspection Department inspects stores on delivery, it has nothing to do with inspection of work, except in certain cases during manufacture. We have inspectors of steel at Elswick and Sheffield, who test the steel before it is put into the guns. Inspectors of small arms also inspect parts of rifles during manufacture.

449. Have you anything to do with the date of contract and the date for inspection on completion?—I have nothing to do with the date, I put forward the demand, and I have nothing more to say until the stores are delivered to my inspector for inspection.

450. Although the work on the contract may be obviously and notoriously in arrear, still you do not recognise that it is your duty to take any action?—Not only do I not recognise it, but it is distinctly laid down that I am not allowed to do it.

451. I rather think the Director of Contracts equally did not recognise the responsibility on him to do it?—What happens constantly is that the Principal Ordnance Officer, or the Chief Ordnance Officer for Clothing, represents to the Director of Contracts that there is great delay with regard to a certain contract, and that certain stores are urgently required; things may be very seriously affecting the efficiency of the Army. Representations are made through me, and I send them on to the Director of Contracts, or they are made direct to him.

452. The Director of Contracts told us that after making a contract he had no knowledge of the articles being delivered in accordance with contract, unless he got a special complaint from the receiving department about delay?—Yes, that is so.

453. He also said that there was no regular system of keeping a check upon contract deliveries being up to contract times?—A check is kept by the Principal Ordnance Officer and Chief Ordnance Officer, Clothing Department.

454. If there were a special delay in delivery under contract, would it be the duty of the Receiving Department to make complaint to the Contract Department?—Certainly, and it does so.

455. Have there been any very large number of complaints of delays emanating from your department and sent to the Contract Department?—Yes, a great many; but if you will kindly examine the Principal Ordnance Officer on that point, he will be able to state more exactly than I can.

456. Would it be difficult, or give much trouble, to prepare a statement showing, for a period of six months, the complaints made by your department for delays in contract deliveries?—I do not think it would be difficult, nor do I think it would be difficult to prepare such a statement showing delays during the last two or three years.

457. Do you not think that more might be done in the way of inspection during the progress of a contract to see that due progress is being made by the contractors?—I think a great deal more might be done; that is why I was anxious to get those two travelling inspectors for the Director of Contracts; I wrote and said that it was absurd to expect work to be done by sitting in this office; he must have inspectors to keep contractors up to their work.

458. If that were done, and done adequately, would it affect your judgment as to the desirability of passing the buying of stores to the Supplying Department as distinguished from the Contract Department?—Not the least in the world; it is I, the Director-General of Ordnance, who feel the pinch. I am not getting these stores now, and what I have to do is to go to the Director of Contracts and tell him how I stand, and he does something or nothing as he thinks fit. If the purchasing was in my hands, and a certain firm was so much in arrear, I should send my man to find out the reason why.

459. (*Colonel Miles.*) I suppose you would not put the contract out unless you were assured that the contractor could do it in the time stipulated?—Certainly not. The Director of Contracts constantly puts forward proposals for work to be given to new firms, and if it is for any important class of work, I say no, not until I have inspected that firm, and I propose to send one of my inspectors to inspect them and see whether they are fit to carry out the work; that is not my business, but I do it.

460. (*Mr. Gibb.*) If you had the function of buying, that would place the inspecting and buying under the same head, but not in the same hands?—Quite so. The Inspecting Department contains officers of Her Majesty's Army, and that is absolutely a distinct department; the Contract Branch would be simply one of the eight branches of my department in the War Office.

461. The Inspecting Branch and the Buying Branch would have the same departmental head?—Yes.

462. Who is responsible for determining future necessities as to stores?—It is difficult to determine future necessities as to stores.

463. Who decides as to the orders for stores for next year?—I do. But I can only order up to the amount granted in estimates. I am responsible for dealing with all questions except patterns of clothing.

464. But is it your duty to foresee necessities?—It is very much my duty. I think, if you ask the Chancellor of the Exchequer, you will see that I have foreseen very considerably.

465. Then the duty of foreseeing, so far as the provision of stores supplied by you, rests upon you?—It does. I take Votes 8 and 9, and I take the whole responsibility of those Votes, that is to say, I am responsible to the Secretary of State for the administration of them.

466. Is the preparation of the Estimates done in your department?—The Order in Council says that the Director-General shall submit proposals for the annual estimates for the above services, for which I am responsible. It says that the Financial Secretary is charged with financially reviewing the expenditure proposed to be provided in the annual estimates for Army services.

467. Is the actual work of preparing the Estimates done in your department?—I put forward my estimates for my own services.

468. I suppose your estimates may be divided into normal requirements, reserve stores, and new requirements?—Yes.

469. Is that a distinction that lends itself to your mind, or could you suggest another distinction?—I think new services and normal up-keep would be better; we have never had any special estimate for reserves, up to the present time.

470. How much of the work connected with the detailed preparation of the Estimates is due to the estimating for normal requirements as compared with new services?—I should say the heaviest part of the work was the normal, the other comes in considerable sums.

471. (*Sir George Clarke.*) Do you find it an advantage, or a disadvantage, that the department which buys all your stores has no personal knowledge of them, and no technical knowledge?—It is certainly not an advantage.

472. We have heard that it is an advantage?—I do not quite see how that can be.

473. Your experience is that the Contract Department has not sufficient knowledge of the work and capabilities of the firms?—I think so.

474. Such an inspection as took place the other day, the joint inspection of your officers and the representative of the Director of Contracts is quite a new thing, is it not; as I believe it has not been the practice in the past?—It is, and I should like to say that the Director of Naval Ordnance put forward a proposal to me some time ago that it was desirable that we should know more about the capabilities of output, and the quality of manufacture of the firms which make cordite for the Government, and he proposed to me that I should send an officer of the Inspection Branch which inspects cordite, and an officer of the manufacturing branch which manufactures cordite in the ordnance factories to inspect the different works making cordite for the Government. I thought the Director of Contracts could have no possible objection to this proposal, and I sent the Chief Inspector at Woolwich and the Superintendent of the Royal Gun Factory to inspect some of the cordite works. We passed the papers to the Director of Contracts and he took great exception to my having done this. The matter was laid before Lord Lansdowne, and, after discussion, he stopped this inspection of the cordite works. The Secretary of State decided that in the first instance, this was the duty of the Contract Branch, although the Contract Branch people could not possibly know anything about cordite. I again put the question before Lord Lansdowne, but in the meantime the Director of Contracts had sent some of his clerks to inspect these cordite works, although, as I say, they could know but very little about it. On the other hand, my people were experts, and would have been able to form their own opinion on the points in question. Lord Lansdowne afterwards decided that these inspections were in future to be made by a representative from the Contract Branch and by my official jointly. I had no objection to that, and some time afterwards the works of the great gunmaking firms, who were heavily in arrear with guns, mountings, ammunition, and other things, were visited by this joint committee of ours, which consisted of a representative from the Director of Contracts, the Superintendent of the Gun Factory, and a Mechanical Engineer. This committee was sent to examine the causes of delays

Gen. Sir H. Brackenbury,

and to report, and they have reported, and Mr. Brodrick has taken up the whole question of the penalties on the contracts of these firms. It is a new departure to send this committee to inspect the works, but it is a thing which ought to be constantly done.

475. Does it not seem to require more explanation to put an Inspection Department under the Director of Contracts while you have at your disposal a staff to do that kind of work?—Certainly.

476. And can it be supposed that an inspection of cordite by a non-technical person could be of any advantage to the public service?—I think an inspection by a person who is not an expert, can only result in his reporting what he is told by the contracting firm; I cannot see how it can be otherwise.

477. You spoke of friction between your department and the department of the Director of Contracts. Do not you think that friction is inevitable under the system, and that it has nothing to do with any personal question?—I am personally on good terms with Mr. Major, and my staff with his assistants, but none the less the friction exists.

478. That would point to defective administration causing friction, which would not otherwise arise?—I think so.

479. Have you ever called upon the Director of Contracts to apply penalties?—Frequently, there have been some remarkable cases in connexion with that. I think fines have been inflicted lately more than they were before, because I protested about it.

480. May we take it that there is a divided responsibility on your part; you are responsible for supplying

everything to the Army, but your power does not include the purchase of the articles?—Quite so.

481. And, therefore, that state of things, you consider, cannot be satisfactory?—I am charged with the duty of supplying things, but I am not allowed to purchase them; somebody else does that; I can only send in a requisition for them.

482. (*Sir Charles Welby.*) Supposing the system were altered as you suggest, would not there be an increased possibility of collusion between contractors on the one side and the members of your Buying Branch and of your Inspection Branch on the other, and in the event of that leading to the passing of defective stores, which might possibly cause a public scandal? Do not you think it possible in that event a charge might be brought against your system that it was too much of a close borough, and that there was not sufficient check against such an event arising?—I think if you are going to have any real responsibility under one man you must take that risk; after all it is not so much what people will say. The question is, would there be any greater risk under my proposed system than there is at present with the Director of Contracts' people who buy for my department? It seems to me that there would be no greater risk of my people entering into collusion than there is at the present time with the Director of Contracts' subordinates.

483. I did not put it to you as a practical risk, but as to what might be said in the event of a scandal?—That cry was raised when I proposed that the ordnance factories should be put under me. They said that the Inspection Branch being under me, the Manufacturing Branch should not be under my charge also, but that has all blown over, and the system works well.

The witness withdrew.

THIRD DAY'S MEETING.

SECOND DAY'S EVIDENCE.

At the War Office.

Tuesday, 15th January 1901.

PRESENT:

—MR. CLINTON DAWKINS (CHAIRMAN).

MR. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
MR. G. S. GIBB.

MR. W. MATHER, M.P.
Colonel H. S. V. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

MR. H. J. GIBSON, *Secretary.*

Colonel John
Steevens, C.B.

15 Jan. 1901.

Colonel JOHN STEEVENS, C.B., examined.

484. (*Chairman.*) You have, I believe, been Principal Ordnance Officer since April 1898?—Yes.

485. That is to say, you are practically storekeeper of the Army, so far as Woolwich is concerned. You receive all the stores?—Yes.

486. And, having received them, you issue them to the different departments that require them?—Yes; not only do I receive them, but I have to provide for them, so as to meet the wants of the Army in advance.

487. That is to say, if the stores in a particular branch begin to run low, you demand a sufficient number to keep them up?—Not only that, I know the requirements of the Army. I have to provide stores to meet those wants, not when they are running low, but I have to estimate beforehand, and get them beforehand; it is no use my waiting until they run low, because you could never then meet the wants of the Army; you cannot meet the wants in a hurry. I have to keep up stocks to meet existing services, or to provide stores to meet new services.

488. Then you would make demands to replenish the stocks when they begin to run low; but as regards new services, you have to foresee them, and make the necessary demands?—Yes.

489. Then, I understand, you yourself do not actually draw up the requisitions. The requisitions are founded upon your demands?—Which requisitions?

490. The requisitions which come into the Contract Department?—I make the demands on the Contract Department. I draw them up in my office.

491. The specifications are drawn up by the Inspecting Officers, are they not?—Yes.

492. You simply make a demand for so many articles, according to the specifications which accompany that demand to the Director of Contracts, or to which reference is made?—They do not accompany the demand. They are quoted on the demand. Every specification has a number, and every pattern has a number. Against each item, for instance, "harness,

crupper," there will be a column, "specification so and so," "pattern so and so." In my demand that is detailed in the column.

493. Then in the actual demand that you make for such and such saddles, for such and such a service, there would be a specification already drawn up, which had issued from the Inspecting Department originally, according to which the saddles would have to be provided?—Yes.

494. And the saddles upon receipt, before you took charge of them, would be tested with regard to the specification originally framed by the Inspecting Officer, who is not under you?—Quite so.

495. Do you think that the system under which your demands are forwarded to the Director of Contracts leads to any delay?—Yes, it leads to delay in meeting the wants of the Service. That delay also causes the efficiency of the Service to suffer, because I do not get the stores when they are required, owing to the necessary delay which occurs in passing through many post offices before the tenders, apparently, can be got out.

496. Of course, there is a certain amount of delay which must be involved, whoever bought the articles, in putting out tenders, advertising, and so on; but do you think, apart from that, that there is any serious delay in fact which occurs in the Contract Department. When your demand is put into the Contract Branch, is there any delay in the Contract Branch before they deal with it? Do they keep it there two or three days before putting out the necessary tenders?—Yes, many days, weeks; and the whole question is that, although I may put on "urgent," or "for immediate provision," I may do it in time of pressure on 50 demands, and the Contract Branch cannot know from any minutes I may put on the papers which is the more urgent; they must then practically take them in routine. If I were to deal with those demands, I should at once know whether I must deal with this or with that; they cannot know, and therefore there must be an inevitable delay in treating one after the other.

497. Does that delay, in your opinion, arise from any remissness of the Contract Branch, or simply from the fact that during the recent emergency and pressure the Contract Branch has been so under-staffed that it has got into arrears with its work?—It is not remissness, undoubtedly, but it is from want of knowledge in dealing with the demands, as to giving priority to the proper demand. No minutes of mine can give them the information how to deal with the question, and, in my opinion, they do not look upon the immediate importance in the way I should look upon it in dealing with the requirements.

498. But I suppose that in a Contract Branch that approached a state of perfection, whenever any demand came in, the necessary action inviting tenders, and so on, would take place within 24 or 48 hours?—There is such an amount of writing involved that it is impossible to do that, if they carry out the ordinary routine system; but tenders could be invited by telegram to meet an emergency; routine is another thing, but on emergency one must overthrow all routine. That is my ideal.

499. Then it comes to this, that the Contract Branch has not sufficient staff, in your opinion, for dealing with questions of emergency?—They do not appear to me to attempt to do that; they have not sufficient staff, but they do not seem to attempt to deal with emergent questions.

500. You mean they are already swamped, or, at any rate, have been so during this recent pressure; or is it the same in normal times?—There are always long delays in normal times. I can give instances which, perhaps, would explain what I mean.

501. I should be very much obliged if you would give us instances of delays which took place, both in normal times before the war, and in times during the war, when there has been, of course, severe pressure?—I am afraid I have not instances before the war, because that is going back into records for some years, but here is one instance of what I refer to: Signal rockets were telegraphed for from South Africa; the contract demand was sent up on the 13th February, for immediate provision; this was at the time when Mafeking was in question, and various other posts, where signal rockets were a very important item; the demand went up on the 13th February, the tenders were sent out on the 22nd February, returnable on the 28th February, and delivery was completed by

the 20th April; that is to say, by the system followed, it took from the 13th to the 28th February to get in tenders.

502. The tenders went out on what day?—On the 22nd.

503. I suppose there had to be a certain number of days for the tenders?—Six days, in order to give time to the contractors, but we knew pretty well who made signal rockets, and we could have purchased them quickly by telegraphing to a certain firm to get them; and the exigencies of the Service, I maintain, would have warranted our doing so.

504. That is a particular case in time of emergency; I understood you to say that delays also occurred during normal times. If, without going very far back, as the war has only been going on, after all, a year and a half, you could give us any instances of delays having occurred during normal times, we should be much obliged?—I have not looked into the question, and I could not give you any instances without looking up records.

505. But I thought you said delays did occur during normal times?—Yes, necessarily they do; there are necessary delays, I do not say there is anything else, in getting out the documents for the tender forms.

506. (*Mr. Beckett.*) You mean as part of the system?—Part of the system.

507. (*Chairman.*) What does that necessary delay consist in? The Department receives your demand, say, for saddles, and then they have to look out the specifications for saddles, and then get out the tenders, is not that so?—It is purely clerical; they do not hold the specifications in the Contract Branch; they are only quoted. Their tender forms are merely copies of my requisitions.

508. Where are the specifications actually lodged?—They are at Woolwich. The contractors have to go to Woolwich to see the patterns and specifications, in order to make their offers on the tender forms.

509. When the Director of Contracts puts out a tender, he says that saddles must be supplied according to such-and-such a pattern?—Yes.

510. Does he then refer the contractor to the actual pattern which is kept at Woolwich?—Yes. It is stated on the form that the contractor can see the pattern and specifications at Woolwich; he goes down to see them; and he then makes his offer.

511. Now, supposing that the purchases were made, not through the Director of Contracts, but direct by the heads of Departments at Woolwich, you would still, as long as you had a system of tenders, have to go through those forms; you would have to put out your tenders, and invite your contractors to come and see the patterns?—Undoubtedly.

512. That is an unavoidable delay, as long as you have a system of tenders?—Yes.

513. And you cannot get over it as long as you have a system of tenders and a system of specifications?—That is so.

514. Then, if the purchases were effected directly by the heads of the Departments, as long as the system of tenders and specifications was kept up, do you think that the work could be done more quickly and more satisfactorily?—It would be done, I consider, more satisfactorily, because we should have dealings with the contractors, and if they did not offer we should know where the shoe pinched. I know all about the Stores and the requirements, and I should be able to say: If you cannot do it in black, you can do it in brown. But here the want of knowledge of the Contract Branch would prevent their asking that question. If I can see the contractor, and know what he is doing, if he is doing one class of work, I could say from knowledge of circumstances: Drop that, and go on with the other. In order to enable the contractor to get that information, he would have to go to the Director of Contracts, from him to the Director-General of Ordnance, and then to me. We are not in touch with the man who makes the things and supplies the things. Everything is done through what I may term a fifth wheel.

515. But as long as the system of tenders is kept up, you could not deal with the contractors in the way you suggest; you would have to put out your tenders?—Undoubtedly.

[Colonel John Stevens, C.B.]

15 Jan. 1901.

Colonel John
Stevens, C.B.

15 Jan. 1901.

516. It is the system of tenders that causes delay?—It causes necessary delay; that will have to follow, whatever system is adopted. The tender must go out; it must be carried out in that way.

517. Then where would the precise advantage come in of having the purchase made by an officer like yourself with expert and technical knowledge?—I have to get the Stores at a certain time. I have to meet the wants of the Service. I should see all the tenders, and I could therefore say that the lowest tender would do or the lowest tender would not do; and I should therefore not give it to the lowest contractor if it would not meet the Service.

518. But you do see the tenders now, do you not?—Only occasionally. I had one only two days ago about tent-pins. The tenders were out about a day or two ago for these tent-pins. The lowest contractor quoted at about 4s. 6d. a hundred, and the next contractor about 6s. 6d. a hundred; but the 6s. 6d. man gave a better result, a better delivery.

519. In point of time, do you mean?—In point of time. The Director of Contracts proposed to give this higher contractor a million and a half, and the lower contractor only a million. That was referred to me, and I then said, "But I do not want tent-pins; I have plenty. If you give it to the lowest tenderer, it will meet the Service." He thought we wanted them, and (it was in the best interests) was going to give the contract to the higher contractor, but he asked the Director-General of Ordnance, "Do you agree?" He did not do it without consulting him. He had not the knowledge. I have the knowledge at Woolwich to deal with all those questions without their going through two branches up here before the matter comes to me.

520. But when you put forward your demand, you also state with it, do you not, in what time the article is wanted?—My demand states, if it is pressing, "For the earliest possible delivery." Then they should consider the rate of delivery on the tender.

521. That is to say, they should consider both time and price; they should pay a higher price for an article that can be delivered soon than for another article that can be delivered cheaper at a later date, if early delivery is necessary?—Yes.

522. Do they not take time into consideration?—Yes, but the generality of my demands simply go up: "Provide so-and-so," unless there is any special urgency, and then they make provision according to the tenders.

523. That is to say, unless you specify that your demand is a pressing one, they would, as a matter of course, take the lowest tender?—Yes.

524. Then it seems to me that, supposing the contract department were sufficiently manned to be able to pay prompt attention to the more pressing demands, the work might be carried out really quite as quickly as if it were executed by the heads of Departments themselves, who have expert and technical knowledge?—The mere fact of putting out tenders and getting in the replies could be so done, but there are frequently questions arising upon tenders; either the contractor writes about the specification, or he says that he could do so-and-so at a quicker time if he got a greater quantity. That has to be referred to the Director-General of Ordnance, who generally refers down to me when such questions arise.

525. Such questions would always be liable to arise, but under the present system they have, practically, to go through another post office?—Yes.

526. Involving, you may say, 12 or 24 hours' delay?—Yes; a minute written in the Contract Branch by the Director of Contracts on the 14th would probably reach me on the 18th or 19th; it takes considerably more than 24 hours.

527. There is no reason why it should not be put through quicker than that, unless it may happen that the branch is under-staffed?

528. (Colonel Miles.) You mean by going through the different heads; that is the course of procedure, and that takes time?—Yes.

529. It is not a question of staff?—No.

530. (Mr. Gibb.) Would you tell us the steps that take the four days? You say that a minute of the Director of Contracts would not reach you, supposing it were dated the 14th, till the 18th. Will you just follow

what happens to that minute?—On the 14th the Director of Contracts makes a minute; it would get over to the Director-General of Ordnance's office some time on the 15th, probably by the afternoon box; it would be noted in their register book, and it might not get to the officer in charge of the branch until the 16th. He would minute it, and then it would go out and come by Woolwich messenger, and it might come that afternoon or the next morning.

531. (Chairman.) Then the delay apparently is in the Director-General of Ordnance's office; the Director-General of Ordnance's office is the post office where the delay occurs?—It has to be dealt with in the Director of Contracts' office, which generally takes one or two days. In getting through papers take a long time.

532. (Mr. Gibb.) But you assume that it comes out of the Director of Contracts' office on the 15th?—Yes.

533. If it takes three days to reach you, then the delay must be in the Director-General of Ordnance's office, and not in the Contract Office?—Yes.

534. (Chairman.) Then supposing the heads of Departments were to make the purchase themselves, you could probably only eliminate one of these post offices. Supposing the Director of Contracts did not exist, still the letter would have to pass through the Director-General of Ordnance; it could not go straight to you?—Unless he decentralised the work to me.

535. Unless he left you to deal entirely with certain contracts?—Yes, and as I should be working under him, I have no doubt that he would not place such restrictions upon me as I now have placed upon me.

536. But are those restrictions imposed by the Director-General of Ordnance, or by the Director of Contracts?—By the Director of Contracts, by the system under which it works.

537. Could it be the regular system that the Director of Contracts should deal directly with the principal officer of the Department, instead of the matter passing through the Director-General of Ordnance?—No. Because the Director-General of Ordnance may wish to have something to say on the matter himself, and there are also financial questions involved. I do not keep the money-value of the Stores at Woolwich.

538. But how do they come in on a reference like this with regard to a contract?—If a contractor delivers a thousand more picket pegs than his contract, it would come down to me, "Do you advise acceptance?" These cost, say 50l. I say, "Yes, I advise it;" but then there is 50l. on the Vote for which the Director-General of Ordnance is responsible, and which he keeps up here in the office. Therefore, the paper must be referred to him to know whether he has the money to spend on it.

539. Precisely. He has only a certain sum of money to spend?—Yes.

540. Then I do not see that the delays are imposed on you by the Director of Contracts, but rather by the Director-General of Ordnance, in reality by the fact that it is necessary to ascertain whether there is financial provision for it before an order can be made—whether you have money with your bankers before you draw a cheque?—It only means one more reference, one more branch at Headquarters to be consulted.

541. To turn to inspection, the inspection is done by the inspecting officers under the Director-General of Ordnance, but that is quite distinct from you?—Quite.

542. Now, as regards penalties, in your opinion, is the system of dealing with penalties satisfactory?—I consider it unsatisfactory. I gave evidence before the Mowatt Committee which dealt very largely with contract questions, to the effect that penalties were very rarely enforced, and I handed in a statement showing that from my records about 15 penalties had been enforced during the previous three years.

543. Would it be for you to recommend that penalties should be enforced, or for the inspecting officer who inspected the articles before he passed them over to you?—I do not recommend; it is for me to send a statement to the Director of Contracts that the penalties have been incurred. I keep the records of receipts; he deals with the question as to whether a penalty shall be enforced.

544. That is to say, if the goods are late in delivery, or if the inspecting officer finds them to be of inferior quality, this is reported to you, and you report to the Director of Contracts that the occasion for a penalty

has arisen; is that the procedure?—Yes; but it has nothing to do with the Inspection Branch; the information comes out because the articles are rejected, and, therefore, they are not received; but, as a matter of penalty, the Inspection Branch keep no records of the deliveries.

545. Then you state or suggest that there is occasion for a penalty?—I do not suggest. I send up a statement showing that there is a penalty incurred, and, on some occasions, I have recommended definitely that the penalty should be enforced; but it is a matter entirely for the Director of Contracts to deal with.

546. When you say that it is entirely with the Director of Contracts, do you mean that he remits or modifies a penalty that you have recommended without consultation with you, and without being in agreement with you?—It is the Director-General of Ordnance who really makes any recommendation, and I know that there have been cases where the Director-General of Ordnance has made recommendations, and the Director of Contracts has not agreed with him.

547. That is a matter in which you yourself do not particularly intervene?—No, I do not.

548. It is the Director-General of Ordnance?—Yes, I have noticed one or two papers where the penalties have been remitted, and I certainly could not understand the causes of remission.

549. Now if the Contract Branch were to be broken up and decentralised in any way, would it be possible for you yourself to become the purchaser of certain articles, while the superintendents of the factories purchased other articles?—Yes.

550. And you contend that you have expert knowledge which would particularly qualify you to do that?—Yes.

551. But I suppose that you would want under you certain clerks to keep you posted with regard to sources of supply?—I do not quite follow you.

552. I understand that at present the Director of Contracts, amongst his other duties, makes himself acquainted with all the existing sources of supply in the country of certain articles, so that he can make the best bargain possible really for the public, by having the widest field from which he can draw his supplies?—I do not think he does; I have cases where I have telegraphed and written to him and said: "It is useless giving so-and-so any more contracts, he is defaulting in every branch;" but still they give them. I have cases where I could point this out to you. For instance, I twice telegraphed regarding a tent contract in December, and the contractor was sent down to see me with his list of outstanding orders for me to tell him which would be the most important. He stated, as an example, that he could make a 1,000 circular tents a week, which was put on paper and given to the Director of Contracts, who passed it on to me. He delivered 238 a week instead of 1,000; and on contracts which should have been completed, he delivered 540 in December, when he ought to have completed 2,500. He was a defaulter all round, and yet contracts were constantly being given him. In the same way another tent firm had been given contracts by which they should have delivered 350 tents a week, and taking the first three months of last year, from the 1st January to the 31st March, they delivered 17 tents during the whole of that period, when contracts had been definitely made with them to deliver 350. I pointed this out at a meeting which the Secretary of State had some time in May, when it appeared that no one had been to see these firms' works or to know why they did not deliver, or anything of that kind; but there was the fact that they had contracts given to them for 350 tents a week, and they delivered 17 during three months.

553. And were there, in your opinion, other firms who would have been more capable of supplying the tents?—Yes, there were, and they were afterwards employed.

554. Had you previously recommended that the order should be placed elsewhere?—No, I had not.

555. Could you give us the names of the firms?—Yes. Shall I give them now?

556. Would you send them in privately?—If you please. I might take another case where orders are placed. Of course the year has been abnormal, we know that; but when one points out that contractors are doing nothing, still orders are placed with them,

and are added on, and that is what I maintain is very serious.

557. How do you know that contractors are doing nothing; have you any means of sending down yourself and finding out as to the progress of orders?—I have done that.

558. It does not come within your duties to do it, really?—No; but I communicate with contractors and ask them what they are doing. I have communicated in this way with one firm who had a contract for tent mallets. That contractor was given a contract for 10,000 tent mallets in December 1899. In March, when he should have delivered more than half, I telegraphed to him to ask, "Why no delivery?" He telegraphed back and said: "I have not my machinery, but I expect it next week." While this was going on, although this was reported to the War Office, another order was given them for another 10,000; that firm has delivered up to the end of last year 127 mallets instead of 20,000; and, as a consequence, it was only yesterday, the 14th of January, when I had orders to send tents to the Cape (I had an order for several thousand tents, and was unable to supply mallets with them) that I telegraphed over to the Inspecting Officer at the Dockyard at Woolwich to say: "Have you not any mallets? I hear you have some rejected, but could they not be done with at a push?" and I received his telegram yesterday: "There are 500 of so-and-so's lying here rejected, because the handles will not fit the heads;" this is the contractor who should have delivered 20,000, who did deliver 127 up to the end of last month. That is only one case; it is most difficult to pick them out to explain the delays to you, but that is just an example.

559. Have you any idea, in your own mind, how these very unsatisfactory contractors come to be placed on the War Office list?—I cannot understand it.

560. Is it partly that, as regards these articles, there are only a limited number of people who can supply them?—Yes, in this case, it is so; but I think to employ a contractor and give him an order for an additional 10,000 when he had made no deliveries on a previous order for a like quantity on a former contract, is a thing I cannot understand. I asked him why he has not delivered, and he says he hopes to have the machinery up next week, and with that before me, to give him another order for another 10,000: I do not follow the theory that would carry on business in that way.

561. Would there have been no possibility of buying these articles in default from anybody else?—Not in default at the present time, because all the trade is practically full up. But here is another example about default to which you refer. There was a contract on the 19th of May 1899 for 7,900 packing cases, they were unsupplied; the contractor was called upon to expedite, and explained that he had not elm for the ends, but "hopes to get it soon from America." On the 3rd September that year there were over 5,000 undelivered. The deliveries had to be so many a month. On the 20th September the contractor wrote, "Will make a delivery next week." Nothing happened. On the 3rd November the contractor states he is "doing his best to get the elm." Nothing happened. On the 25th November he writes, "Have arranged to get elm from America and cannot speak with confidence as to deliveries until telegraphic confirmation of purchase from America." Nothing happened. On the 31st January, the contractor says, "Have arranged to purchase and expect to get the documents" by the 10th January. On the 6th February he replies "Nothing definite yet. Expect a mail to-morrow." Well, the net result was that the contract for the delivery of those 7,900 cases was to be completed on the 31st March 1900; up to the 17th August 1900 he had supplied just over 4,000; leaving over 3,000 unsupplied. Those were purchased elsewhere in default; but as they were purchased cheaper, there was no excess cost and therefore no penalty for delay. And those documents go backwards and forwards to the War Office with those excuses on them.

562. (Mr. Gibb.) With whom would that correspondence which you have been reading take place?—With the Director of Contracts, in reply to his letters.

563. It is correspondence between the Director of Contracts and the contractor?—Yes, the usual procedure is that I send him up a hastener to do it; he

Colonel John
Steevens, C.R.

Colonel John
Steevens, C.B.

15 Jan. 1901.

writes to the contractor and says, "This is very unsatisfactory, please say what you can do;" the contractor answers and the Director of Contracts says, "P.O.O. please see." That would be the ordinary routine case.

564. We have had Mr. Major before us, and I asked him. "Do you consider contractors on the whole deliver well up to contract time?" and his reply was "On the whole, certainly;" so far as your experience goes, it seems that you do not agree with that?—I differ entirely.

565. Do you think that there is substantial and serious delay in the supply of stores under contract?—Yes.

566. Not only in individual cases, but in many cases?—I can only say that I place no reliance whatever on dates which are arranged for in contracts for delivery.

567. That might be the fault of the dates being loosely filled in?—By the contractors. There is no penalty; practically there has been no penalty attached. I have often heard it stated—I cannot give evidence of it—that a contractor gives a price in order that when he is slack in his business he may just cover his rent and his men's wages.

568. You do find, under the present system, that there are many delays?—I do.

569. The Director of Contracts also told us that there was no regular system by which he was advised as to whether articles were delivered at the contract time or not?—There is a perfect system.

570. He said that he only heard of any difficulty if there was excessive delay in delivering the articles?—After the date of completion has arrived we give the contractor 10 days' grace. Then we send what we call "B" and "C" enquiry forms.

571. From your office?—Yes, to the contractor; it is returned, and then the whole deficiency is reported to the Director of Contracts, unless during this inquiry and subsequent correspondence delivery is made. He then knows when the contractor has not delivered to time.

572. Then do you report to the Director of Contracts every case where there is delay over 10 days?—Until the war pressure we did. When that arose it became impossible, because there are delays in every contract.

573. In normal times?—In normal times they are reported.

574. Then it would not be difficult to prepare a statement covering six months, we will say, or a year, embracing only important contracts, showing the delays which in fact took place?—No; it could be done.

575. Say in the year 1898?—Yes.

576. Then perhaps you would take in hand the preparation of a statement of that sort to show the Committee what delays have in fact taken place?—Yes.

577. Now I asked General Brackenbury whether complaints had been made to the Contract Department by the Ordnance Department about the occurrence of delays, and he referred me to you; what do you say?—They are many.

578. You have complained of delays to the Contract Department?—Yes.

579. Has it been the subject of personal conference between you and the Director of Contracts?—Never—all on paper.

580. Then have you been making habitual complaints?—Habitual complaints.

581. And has any notice been taken of your complaints?—Yes. The usual notice is that the contractor is hastened.

582. (*Sir George Clarke.*) That is to say, he is asked to be quicker?—He is asked to be quicker.

583. He is not necessarily quickened?—No.

584. (*Mr. Gibb.*) That is to say, each complaint is dealt with by itself?—Yes.

585. But have you taken up the question with the Contract Department from the point of view of systematic delay in the delivery of the stores under contract, apart from the delay, under any particular contract?—The general question?

586.—Yes?—No, I do not think it has been discussed as a general question.

587. You see your evidence here is that there has been, for a long period, habitual and systematic delay?—Yes.

588. But you have never thought it advisable, previously, to take up that question with the Director of Contracts?—Whenever any question is taken up on contract questions, I have the feeling that it is bound to be opposed. During the time that I have been at Woolwich, I think, only once have I ever seen any sympathetic answer to our difficulties, in meeting the requirements of the Service, from the Contract Department.

589. That is to say, you have refrained from complaining, because you thought it would be no use?—The question of these delays is so well known. The question was very much discussed at the Mowatt Committee, specially about fines and the method of dealing with contractors, and about giving contractors orders for precisely the same stores for which they were already in arrears.

590. But, if your duty of providing the Army with stores was being hampered with these habitual delays in getting stores, would it not have been right to raise the question for the consideration of the authorities?—The question was raised, and I was present when the Secretary of State, Lord Lansdowne, had a meeting about it, and excessive delays of certain items were brought before him. The result of that meeting I never saw.

591. When did that meeting take place?—In May last.

592. Now, as regards the suggestion that the purchasing should be done by the Ordnance Department, I understand you think that that would lead to Stores being got more quickly?—I do.

593. But, supposing the Ordnance Department had the duty of purchasing, what could they do that the Director of Contracts cannot do now?—If the duty were appertaining to the Director-General of Ordnance he would, I am convinced, decentralise purchases, instead of the contracts being under a separate department, so that every little thing in deviation from routine that I do or that any officer under the Director-General of Ordnance does, is queried and brought forward for the consideration of the authorities. It is only this morning, five minutes before I came into this room, that I saw a paper in which the case of a purchase of six corn crushers was held up to show that I had bought them at Woolwich when there was no necessity for me to go into the contract business, as they had bought 200 immediately afterwards with great ease. The facts as to those six corn crushers are these: I had the paper down on the Saturday morning; I remember distinctly; it was at the very beginning of the campaign; and it pointed out that on every transport carrying horses there should be corn crushers to crush the grain for these horses. I had the order on the Saturday morning that six were to be put on board ship. They were to be put on board on Monday or as soon after as possible. I sent out and bought them. In no other way could those corn crushers have been put on board. But it is thrown back upon one, and queries are raised on one's action, which was really taken for the good of the Service, and in the only possible way that the service could have been met. And that is done on every possible deviation from routine that is carried out. We serve different masters, apparently.

594. But if the duty of buying were transferred to the Ordnance Department, the same kind of question would be raised, would it not?—No, the Director-General of Ordnance would not raise that question.

595. But would not the financial authorities raise it?—I should think not.

596. Do you suggest that the Director-General of Ordnance should have a general power to buy, with a discretion to buy with or without tenders?—Certainly.

597. You would give him an absolute power to buy, dispensing with tenders if he thought fit so to do?—Competitive tenders, you mean?

598. Competitive tenders?—Certainly.

599. Then, if that is a desirable thing to do, that power could be given to the Director of Contracts as well as to the Director-General of Ordnance?—He has it now, unless I am very much mistaken.

600. Then your complaint is that he does not exercise that power in a sufficient number of cases?—No, my

complaint was about the Contract Branch being apart, so that where the Service requires us to go out of the usual routine, if I or any officer of the Director-General of Ordnance do anything in that way we are immediately jumped upon, if I may use the expression, although the service could not have been met in any other way but by ignoring routine.

601. Does not that really come to this, that you sometimes think a purchase should be made promptly without issuing competitive tenders; the Director of Contracts thinks that it should not, and there is a difference of opinion between the two officers?—I knew that the Service could not have been met, except by omitting competitive tenders. I have explained that this order came on the Saturday, to be put on board ship in the docks on the Monday and the Tuesday, and the only way to get that done was to send a man to the makers to pick them up where he could.

602. If the Director of Contracts had agreed with your opinion, the system would have presented no difficulty in carrying it out?—I do not quite follow the question.

603. Supposing that the Director of Contracts had taken the same view in the particular case which you mentioned as you did, he could have concurred with you in having the stores bought as they were bought?—Yes.

604. So that the system did not prevent that being done; it was simply the particular opinion of the Director of Contracts on the particular case?—It is the same with every case.

605. But does not that come to this, that you think the Director of Contracts does not sufficiently authorise you to buy without competitive tenders?—Yes; he does not authorise anyone out of his own branch to make a purchase; consequently, when it is done there is always much reporting and much minuting of papers on the subject.

606. But a purchase such as you have described could be made, could it not, in the Contract Branch just as well as in the Ordnance Branch?—No, this could not have been.

607. Why not? why could not the Contract Branch have dispensed with tenders just as you did?—Because there was a question of getting these things between the Saturday and the Monday; I knew, and my parties knew where the ship was lying, and how best to get them on her, and where we could go and get them. The man had to start at once on the Saturday morning, it was a half-day; I could not have written or telegraphed to the Director of Contracts all those particulars.

608. No, but you could have telegraphed in that case asking authority to buy?—Yes.

609. And the Director of Contracts could give you that authority if he were so disposed?—Yes.

610. (*Sir George Clarke.*) But you would have had to explain to the Director of Contracts the whole of the circumstances on your telegram; he would have had no knowledge of the exigencies of the Service, that the articles had to be put on board a particular ship on a particular day?—I could have explained it; it would have been a long telegram.

611. (*Mr. Gibb.*) Now, as regards the tent mallet case which you have given us, do you know whether there were any previous contracts with the firm who got the 10,000 contract?—No previous contract, I should say.

612. You do not know?—I do not know without referring to the books; but from my knowledge of how tent mallets are bought, I should say that they had had none.

613. They had been previously bought by contract from other firms; it was not a new article that had never been bought before?—Yes; it was rather new to the trade.

614. It was a new pattern, do you mean?—Not a new pattern, but we had always got them from the Ordnance Factories previously.

615. You had previously manufactured them, and were entering the market for the first time to buy 10,000 tent mallets?—Yes.

616. Did the Director of Contracts advertise?—Oh yes; put out tenders.

617. And did you make any previous enquiry as to the firms who would be likely to supply?—No; that would not be my business.

618. Now you say that you do not, in sending in your requisitions, state the time when you want stores to be delivered?—No.

619. Would it not be better if you indicated the particular time when you wanted important stores, on the requisitions?—No; there would be little advantage in it.

620. But, under the present system, the Director of Contracts apparently does not know further than that you want things "in the earliest possible time," which is a phrase that may be applied to almost everything?—Quite so, but no minutes, no dates, no exhaustive reports, would be able to afford information to the Director of Contracts on these points of urgency.

621. Take the tent mallet case again. I suppose you wanted them by a particular date, if you could get them?—I wanted them as soon as possible; I want them now as soon as possible; I cannot supply tents to South Africa because of the failure of tent mallets.

622. Then, in that case, somebody would have to ascertain at what date the trade would deliver?—They do that by sending out tenders, and they see what the offers are, but when they find that those offers are not being complied with in the least, I fail to see the use of giving that contractor further orders.

623. That is another point, no doubt; but you do not think it would be advantageous that the requisitioning department should, in most cases, indicate the date when they want supply?—No, because I do not think you could lay down a date.

624. In many cases you could not; in some cases I suppose you could?—In some cases we could and we do, but very rarely. I remember last year asking for some tent floorings—tent bottoms for camps—by the end of July, but I did not get them.

625. No doubt it is the general experience that manufacturers do not supply goods very promptly, and it is a difficulty that has to be faced by every buyer. Now as regards the imposition of penalties; you think that a more rigorous application of penalties would secure more prompt deliveries?—Yes, that is my opinion.

626. But have you had any general experience of dealing with contractors and getting deliveries under contracts?—Private, personal experience, do you mean?

627. Yes?—None.

628. So that you have not any personal experience of the effect on contractors of a rigid enforcement of penalties?—None.

629. Is not the question of enforcing penalties in order to secure deliveries very largely a question of policy?—Very largely, yes.

630. And whether it were decided by the Director-General of Ordnance or the Director of Contracts, it would have to be decided on grounds of general policy?—Certainly.

631. And the department now responsible for its decision is the Director of Contracts, subject to the Secretary of State?—Yes.

632. Your suggestion is that the department should be the Director-General of Ordnance, subject to the Secretary of State?—Yes.

633. At present the Director-General of Ordnance thinks that penalties ought to be more rigorously enforced; the Director of Contracts apparently thinks they ought not?—Yes.

634. But supposing the successors of the present holders of these two offices to reverse their opposite views on this question of policy, what permanent advantage would be gained by transferring the duty of the Director of Contracts to the Director-General of Ordnance?—Are you taking the question of fines only into consideration?

635. Yes.—But the question of fines is a small item in the general scheme.

636. But I am just dealing with that one item, because that is one of the modes suggested for getting more prompt delivery?—I think that when one finds that the non-fining system has failed, we had better try the fining system; it is being tried now.

637. That may be so, but is not that a matter of individual opinion, and would you get any permanent advantage by changing the system, because the present Director of Contracts thinks, apparently, that fines are sufficiently enforced?—Well, of course you can always have differences of opinion.

Colonel John Stevens, C.B.

15 Jan. 1901.

Colonel John
Steevens, C.B.
15 Jan. 1901.

638. If the view of the Director of Contracts is not right it could be reviewed by the Secretary of State, could it not?—Certainly, and I imagine it has been judging by results.

639. Now you have said that your duty is to provide for the wants of the Army and to foresee the necessities of the Army?—Yes.

640. Acting, of course, as a department under the Director-General of Ordnance?—Yes.

641. Now if the whole duty of purchasing and making contracts were placed under you, would not the work involved tend to withdraw your attention and time from the more responsible duty of providing the stores and foreseeing the wants?—It is not intended, I think, to place them under me. The Director-General of Ordnance would retain the essential Contract Branch in his office—in the War Office.

642. Then that would be the creation of a separate Contract Branch in the Ordnance Department?—That is so.

643. Now I want to suggest to you, whether the object you are aiming at might not be as well secured by placing the responsibility for the execution of all contracts upon the Director-General of Ordnance, instead of transferring the duty of making the contracts to him?—But no one is responsible for the execution of contracts.

644. The Director of Contracts told us that after the making of a contract he considered that practically his responsibility had ceased?—That is the whole secret of the subject.

645. That is why I want to get your opinion upon it?—One's idea in dealing with these papers is that the whole aim of the Contract Branch is to get in tenders, and to place out contracts, and if a firm is a defaulter it is a sort of shrug of the shoulder: "You know there is difficulty in getting in stores; I am very sorry." There is no responsibility in it at all.

646. But if the responsibility for the execution were distinctly placed upon the Ordnance Department, would not that satisfy your suggestion?—I should think that it would be impossible to divide the responsibility for the execution of a contract, which is made by another department.

647. But why? The duty of making the contract is the duty of the buying department. Once the contract is made, surely it would be possible for the receiving department to look after its execution?—No, it would be a hopeless task; the receiving department which is to be responsible for the execution of the contract would not have given the contracts in the way they have been given.

648. Is not that rather confusing two quite different questions: the question of securing the execution of contracts that are made, and the question of selecting the contractors with discretion. No doubt it is desirable that contractors should be selected with discretion, but do you not find that the best contractors require watching?—Yes.

649. And that you have nearly as many difficulties with good contractors as with bad contractors?—I am afraid I cannot give an answer to that question.

650. The complaints that we have had about delays have affected contractors of the very highest standing?—Yes.

651. And do you not think that there is a weakness in the present system whereby the Director of Contracts rather disclaims responsibility immediately after he has made a contract, and the inspecting department, as I understand it, disclaims responsibility until the goods are tendered for delivery?—Yes; the responsibility should be with the Director of Contracts; he has to provide the stores and deliver them to us.

652. But why could not the responsibility for the execution of the contract be placed upon the requisitioning department immediately on the making of the contract, instead of at present, on the tender of the goods for delivery?—Because if you placed the responsibility upon the head of the requisitioning department, he could bring no pressure to bear upon the contractor by saying, "I will not give you another order," or "I will not do this for you in future." You must give him the power to enable him to get the contract completed.

653. He could bring the pressure that he would report the contractor?—He could.

[After a short adjournment.]

654. (*Mr. Mather.*) Departing from details in connexion with specific actions of certain contractors, I should like to ask a question on general principles. Are you able to tell the Committee that if the Director of Contracts duties were performed directly under the authority of the Director-General, it would promote promptitude in delivery, efficiency in carrying out the execution of the contracts, and at the same time provide the necessary safeguards as to the proper expenditure of money to satisfy the Secretary of State?—I am of opinion that it would.

655. From what you have said it would appear that the Department of the Director of Contracts is a department which in itself is useful and necessary, but you would like it to be placed under the direct control of the Director-General of Ordnance?—That is so.

656. Therefore, it would come more or less under your own personal influence as the principal Ordnance Officer?—Yes.

657. All the objections you have raised in your evidence to-day so far, would be met, I presume, in your opinion if the Director of Contracts were an official in your department?—It would greatly assist. He would refer to me as one of the Director-General of Ordnance's officers. We should be one department, we should have one interest, we should have one master. I can only on this subject point to the very great advantage that has arisen during the war pressure in the Ordnance factories at the Arsenal being under the Director-General of Ordnance. Had it not been that we were all of one department, I could never have gone to the superintendents of the various factories, and pointed out to them that we wanted such and such a thing at such and such a time; I was in their rooms, they were in mine, we discussed ways and means and we got ammunition and other stores off at the dates required. If under the old régime, I should have had to go to the Principal Superintendent, who was under the Financial Secretary, and we should never have got through the work we did, and I take it that the same system would have advantageous results in regard to contracts.

658. Have you from your experience—now, I believe, extending over two years in your present position—been able to conceive a plan by which the contracts connected with your department could be carried out directly under the department, at the same time ensuring thorough efficiency and due regard to economy in purchasing?—Yes, I have always considered that if the contract work of sending out tenders and dealing with contractors were put to certain classes of stores in my office, we should have much greater rapidity. Tenders are received and scheduled; I have the books in my office which show exactly the state of every man's contract; a man could take the tenders and see that so-and-so was the lowest tender, he could turn over the pages of the book and see how he stood, what he was like, and then make a remark on these tender forms at once without it passing through various branches; and besides, he could see whether it was a good offer or not, or whether it should be accepted or not.

659. Those are details, I am rather on matters of principle. If you had the sole responsibility of purchasing the stores which you now control and distribute for the benefit of the Army, would not you require an official similar to the Director of Contracts under your control to make the purchases as he does in the markets of the country?—I should require a staff to do it.

660. You would require a staff similar to that of the Director of Contracts?—I should require sufficient men to do all the clerical work in connexion with it, and I should require to have an officer who would be in charge of the branch.

661. Then, I presume, if you have conceived a plan, it would take this form—you would eliminate from the present office of the Director of Contracts all duties relating to the purchase of stores which you yourselves have to maintain for the regular supply of the Army in time of peace, and which you would have to obtain rapidly and promptly in times of war?—Yes.

662. And that separation would leave the present Director of Contracts and his office engaged in the

work of purchasing, but not that purchasing over which you would have control?—It would leave him free to do other duties.

663. I understand you want your own department separated from the general department for purchasing?—Yes.

664. The Director of Contracts purchases now for the Quartermaster-General?—Quite so.

665. And to some extent he purchases for the Admiralty?—Yes.

666. You have nothing to say about those departments, you know nothing about them, do you?—Nothing.

667. But you have come to the conclusion, after two or three years' service in your present position, that it would be better for the Army, therefore better for the country, and more satisfactory to Parliament, if the whole of the duty appertaining to the purchase of stores for the Army, which you have now to deal with, were placed directly under the Director-General of Ordnance, and you, acting for him, could employ a staff just as Mr. Major employs a staff as Director of Contracts, to buy all these various articles for you?—Yes.

668. Supposing you had that authority, what equivalent guarantee could you give to that which the Director of Contracts now gives to the Secretary of State that you would buy on competition and with the benefits of competition, and altogether on a commercial scale as efficiently as he does?—By having full audit of every transaction that takes place.

669. You would, I presume, employ a civilian buyer who would be pretty much what Mr. Major is, in dealing with the whole of the purchases for the Army?—There is no civilian buyer; Mr. Major only makes out the tender forms, receives the offers and locates them according to those offers; he does not buy or send out to buy.

670. I understood he did to some extent make bargains, and that favourably, whereas persons of less experience would buy unfavourably?—With regard to that I should like to refer to a case I have here where I authorised a purchase of some stores down at Devonport. In that case there is a correspondence going on, and it has been going on for two months, with regard to the purchase of field service bedsteads. I authorised locally the purchase of some field service bedsteads which were urgently required in the Western District, and which could not have been obtained to meet the urgent service for which required by any other means than by local purchase. Those bedsteads were bought at 4s. 7d. each, and now there are questions being raised with regard to that price, although on referring to a contract which was made by the Director of Contracts at the same time for the large number of 10,000, I find he placed the contracts at 7s. 5d., 7s. 9d., 6s. 1d., and 7s. 9d., with four different contractors, the purchase which I authorised being at 4s. 7d. only.

671. That, of course, is another detail as to which there may be some explanation on the part of the Director of Contracts. I want to get at some solution of the difficulty which you have presented to the Committee to-day. What have you to propose, taking the constitution of the War Office as it is to-day, so far as your branch is concerned, in order to enable that branch to be conducted with greater facility as regards promptitude than you say it is conducted at the present time?—I have considered for some time that it would be desirable for all contracts to be entered into locally at Woolwich. There all questions arise, there the contractors write or pay visits, there all questions with regard to patterns, specification, time of delivery, questions as to whether this or that will do, are dealt with, but by the present system they have to go and see the Director of Contracts personally. He, as a rule, can give no information to those contractors, their questions are generally put on paper and have to be referred to Woolwich for information with regard to them. That in itself is a cause of delay which would be avoided if the matter could be dealt with at Woolwich where all the information is readily at hand.

672. I presume the Director of Contracts would refer any kind of difficulty to you at the moment it arises?—He does refer it to the Director-General of Ordnance.

673. But you say it takes a long time getting to you, I understand?—It does.

674. Would it not meet your case if the Director of Contracts were placed, as regards your department, in such relation towards you that you could personally confer with him on all questions arising out of contracts made and to be made; would not that give you all the control you require?—I could not have personal conferences because my duties lie at Woolwich, and it takes a day to come up to the War Office from there.

675. If the Director of Contracts were so far subordinate to the Director-General of Ordnance, and, therefore, to yourself, that it was his duty to see you in matters of contracts and take your opinion, as the higher authority, about all matters as to which there was any question arising, he would be your servant in every sense of the word, would he not?—He should be the Director-General of Ordnance's servant, but there are questions upon which the Director-General of Ordnance would have a separate opinion to mine. There are questions of policy—such things as are decided upon by the Army Board, of which I know nothing personally. There are questions which I should have to refer to the Director-General of Ordnance back again. In fact, the matter is rather involved.

676. You are now dealing with the internal working of a department. I am speaking of matters of principle and policy. If the department, so far as it affects the providing of general stores, were placed under the Director-General of Ordnance, would it satisfy you altogether?—Absolutely.

677. (Sir George Clarke.) You have been, I understand, a good many years in the service and have had very large experience as to warlike stores at home and abroad?—Yes.

678. You are not a user but a provider and storeholder on a large scale of army stores and, therefore, you are in precisely the same position, are you not, as a storekeeper, who is also the buyer, of a great railway company?—Yes, that is my position.

679. Your limit with regard to purchasing, I understand, is 25l. ?—Yes.

680. Beyond that you are dependent, except when you act *ultra vires*, on the Director of Contracts for all stores, are you not?—Yes.

681. Officers of much less experience and junior to you in South Africa now must have had to make very large purchases of stores on their own account, must they not?—Yes. From a return received a few months ago I find that they had purchased over a million pounds worth of stores up to the end of June last. All those purchases would be made by Ordnance officers junior to myself.

682. Is it desirable that junior officers who have to make these very large purchases in time of war should have no experience of making purchases in times of peace?—I think it is very detrimental that in times of peace they have not an opportunity of gaining experience in making purchases so that when the emergency arises they may know thoroughly the system which should be adopted with regard to the purchase of stores.

683. Have you ever represented that fact officially?—No, I have not.

684. During this period of war, I assume that the rapid purchase of stores was of national importance. Have you found great difficulty in complying with that demand owing to the operations of the present system?—Yes, I have found difficulty, and especially, to my mind, a very important one. There was a question of mule draft on this campaign; everything was to be altered to mule draft, and mule harness had to be provided in large quantities, as well as the vehicles altered. We had a certain amount of mule harness—about 1,200 sets of general mule harness—in store. I was ordered to convert some 200 sets into six-span sets, that is, suitable for six mules. We did this locally, making a purchase of material and fittings to carry this out. It was done in about three weeks. Shortly afterwards, at the end of September, orders were given to convert a further 150 sets, which were required for the smaller ammunition carts and water carts of regiments proceeding to the Cape. The orders were to have this done as urgently as possible, as the regiments were to go out with their equipment. The Director of Contracts had protested against our previous purchase of material to convert the first 200 sets, and I.

Colonel John
Steevens, C.B.
15 Jan. 1901.

Colonel John
Steevens, C.B.
15 Jan. 1901.

therefore, asked the Director-General of Ordnance whether I should go on as I had done, as we could do it very rapidly, or whether I should send a demand for the material in the ordinary routine manner. The Director-General of Ordnance decided, as the Director of Contracts had protested, that we must comply with the routine, and send them up. I sent up the contract demand on the 25th September. The contracts were placed on the 9th and 10th October, and for deliveries to be completed according to the paper contract in two and a half month's time; the disastrous result of this action being, that regiment after regiment had to proceed to South Africa, with all equipment complete, except its mule harness. There were over 30 units, I think, which left the country minus their mule harness, and on the 4th December I had to write: "There are still 16 units of the Army Corps unsupplied with harness, owing to the want of items due on this contract." There was nothing gained whatever, except, so far as I can see, that the right and power of the contract branch to make purchases, was vindicated, and I can only put it that the military efficiency of those units which landed in South Africa, with no harness to drag their small ammunition carts, demanded other procedure.

685. In point of fact, disaster might have occurred from the action which you describe; those units being deficient of an essential part of their equipment?—I think I can only leave that to the Committee's consideration.

686. Can you state what happened with regard to the equipment of general hospitals?—General hospitals had to be provided. With the force which proceeded to South Africa, say some three or four general hospitals, we had not the equipment ready, and the only way to get those equipments ready was to purchase direct from anyone we could get the necessary stores from, and work night and day to get them ready. I must say that I had been asked in how many weeks I could get these general hospitals ready; I stated three weeks, provided I could make the purchases direct, instead of going through the ordinary routine of sending up demands and sending out tenders. We got the hospitals ready, and they were all shipped directly the ships were provided. This was objected to also by the Director of Contracts. A large item of these purchases was horsehair, which we purchased teased ready for use for filling the beds at 1s. 2d. and 1s. 3½d. a pound. Shortly afterwards the Director of Contracts placed contracts at 1s. 2½d. to 1s. 7½d. curled; therefore our purchase was much more advantageous, from a financial point of view, and what is more, we got the equipment ready, which I have no hesitation in saying would have been impossible if the routine had been followed.

687. That is to say, you equipped the general hospitals not only quicker than they could have been done by the Director of Contract's agency, but more economically to the country?—Yes, the item of horsehair was a very large one, and certainly it was more economical than contracts placed by the Director of Contracts.

688. It has been stated to the Committee, that it was a disadvantage that the Contract Department had no technical knowledge. Is that your experience, and can you give any instance in point?—Yes. I can state that it must be very disadvantageous, because at this meeting, where I was called upon by the Secretary of State, referred to previously, there was a question with regard to enamel ware. We could not get enamel ware for the hospitals, and the Director of Contracts reported it was owing to the state of the tin market; that tin was not obtainable, and the Financial Secretary also told us all about the tin market, but I had to observe that the tin market had nothing to do with the enamel ware, which was made of iron, and tin did not enter into the question. I think for a purchasing authority not to know these details is a disadvantage.

689. In that particular case, therefore, the Secretary of State was directly misled by want of knowledge on the part of the Contract Department?—I put it right at once.

690. If you had not been there to put it right, I presume he would have been under a misapprehension?—I presume so.

691. During the period of pressure created by the war, is it not the fact that the Director of Contracts constantly objected to your taking measures by

which time could have been saved?—Yes; I think I have already mentioned that that is the fact.

692. Are you at this present moment deficient in stores urgently required for South Africa?—Yes.

693. Are contracts given to firms within your knowledge who are unable to carry them out?—Yes.

694. Can you give the Committee an instance with regard to that?—Yes. I have already given an instance, with regard to the contract for tents and tent mallets. There was another case, with regard to rifle slings, where the contractors were in default. I required the slings very much for the use of the cavalry and the mounted infantry, and I was asked to state the number actually required. I did so, and contracts were placed with precisely the same contractors who were defaulters, at a higher rate, for delivery in a fortnight, but they were not delivered for two months. Of course, the original slings still remained unsupplied by these contractors.

695. The Director of Contracts has told the Committee that contracts are hardly, if ever, now given out to middlemen, and that he takes special steps to find out whether he is dealing with the principal or a middleman; in your experience, do you find that contracts are given out to middlemen?—I know that it has been done. I have knowledge of that from this very case of the purchase of enamel ware. I have made similar purchases myself, because, as I have said, I am allowed to do so to the extent of 25L, and I had a good knowledge of the enamel ware market. At one time I sent a large demand, and I marked those items which were of common trade pattern. It did not matter what pattern they were, and it was not necessary that they should conform to our pattern. I wrote and said that I had some knowledge of the market, and requested that I might send an officer acting for the Director of Contracts to make the purchases personally. That, however, was not approved of, and the result was that we did not get a large quantity of that particular article till about two months afterwards. And I know that people who had orders were persons who were not manufacturers at all, but who got from the manufacturers or importers the very same thing which could have been bought direct.

696. When you make a demand on the Director of Contracts, are you informed what steps are to be taken, or do you remain in ignorance until you hear that the Director of Contracts is in some difficulty which you might be able to remove?—I am not invariably informed, and that of course is a source of much difficulty. I can explain that in this way. We had to send some stretchers out to South Africa without slings. I sent up a demand on the 24th January for 3,500 slings, and it was not until two months later I found out that a contract had been given on the 21st March for 900 out of those 3,500 slings at a rate of delivery of 100 per week commencing on the 24th April. That was the only result of my demand—a prospective delivery of 100 a week three months afterward; the result was that stretchers had to be sent out to South Africa without their slings, and a telegram sent to the General at the Cape asking if he could get the slings made out there. If the fact that any difficulty had been experienced in getting these slings had been brought to my notice immediately, I could have arranged the matter, and in fact as soon as I received the information, the matter was arranged and some were made in the departmental workshops. There, again, the Director of Contracts protested and said that he could get leather slings as rapidly as anyone; so I said, "Will you please buy 500 at once?" He, however, telegraphed back and said, "I have placed 800 slings for delivery in a fortnight:" but a month after the date of that contract I had only received half of them. The price he placed them at was 7s. 6d. each, while the cost of making up in the departmental workshops including leather and labour and everything was about 3s. 1d.

697. Then, in that case, the delay may be directly placed to the account of the Contracts Branch. You could have supplied them at a cheaper rate had you had a free hand, could you?—The initial defect arose from the fact that when I sent up my demand in January I was not notified that he could not get the slings. It was a new pattern sling made of web, and it was not until two months after I made the request that I heard there was any difficulty about obtaining them. Then I suggested at once reverting to the old leather sling.

698. I think you told the Committee that further contracts are given out occasionally to defaulting contractors, and at higher prices than the original tender?—Yes, that is so. I have a note of several cases which I can quote. I quoted one about the slings. Then there is a case of table tops, in which a contractor was a defaulter for a long period, owing, as he said, to the pattern required; but a further contract was given to him at 2s. per table top higher, and he managed to supply them.

699. Have you ever pointed out, from your own experience as to contractors, that certain firms are not satisfactory and trustworthy?—Yes, I have.

700. Has your advice been acted upon in such cases?—It was not acted upon during the war pressure.

701. The Director of Contracts informed the Committee that penalties to the fullest possible extent were enforced; is that your experience?—They have been lately, but not to the fullest possible extent; they have been more frequently enforced lately. I think 15 penalties were enforced during a period of three years, and, according to my records, since the 1st April last year, there have been 138 penalties enforced.

702. It is the fact, is it not, that this increased severity as regards the infliction of penalties happens to coincide with the sitting of the Mowatt Committee?—I should say it arose as a direct consequence of the discussions which took place then.

703. Have you ever pressed for the infliction of fines?—No, I cannot say that I have. I send up statements showing when fines are incurred.

704. (*Mr. Gibb.*) Do these figures embrace all the fines within the period you have named?—Yes, in my department only.

705. The Director of Contracts may have inflicted fines which you know nothing about, I suppose?—Not in connexion with the stores I deal with.

706. (*Sir George Clarke.*) As a substitute for fines, are purchases in default regularly inflicted?—Not regularly; purchases are made in default.

707. Do you know of any rule regulating the remission of penalties?—No. I have cases of stores outstanding for two or three years; the papers go backwards and forwards, and backwards and forwards. I have brought cases to the notice of the Director-General of Ordnance, which have been hanging over for many years, and in the end probably the Director of Contracts asks us to purchase.

708. Is it your opinion that there is much superfluous correspondence and waste of time, tending to friction, arising out of the present contract system?—Yes, because every question that arises with the contractor has to go through two or three post offices.

709. Is it not the case that practically the whole of the contract work, that is to say the buying work, is really done by you now, except that part which relates to clerical matters connected with the schedules and tenders?—All the requirements and demands are made out in my office, but the actual making out of the tenders and the interviews with the contractors comes under the Contracts Branch.

710. Of course, contractors have to come to Woolwich frequently, have they not?—Yes, they have to come to Woolwich frequently.

711. Therefore, practically the real work of buying is done under you, although the paper work or clerical work is done in the Contract Department?—Well, I could hardly say that.

712. But you would not find, would you, the slightest difficulty in doing the whole of the work with a moderate addition to your staff?—I see no difficulty about it.

713. Could you supply the Committee with a statement of cases in which delays or difficulties have arisen in connexion with the Contracts Branch?—I can take any six months if you like.

714. You were asked a question with regard to four days delay in getting things out, but I take it that four days would be a mere bagatelle, and that it is after that your difficulties begin?—Yes, there is constant correspondence on every question that arises.

715. Your delays, I suppose, are delays not of four days but of months?—Yes.

716. And that is your real difficulty, is it not?—Yes.

717. (*Colonel Miles.*) You mentioned a matter with regard to mule harness; was it known that that was one of the most important questions in South Africa, and that the provision of mule harness affected the mobility of the Army?—It should have been known.

718. You knew it, did you not?—Yes, I knew it.

719. And the Director of Contracts must have known it?—I should say so.

720. He must have known it was a question of paramount importance?—He ought to have known it.

721. You also mentioned, did you not, something about requisitions coming in, and the Director of Contracts not having the means of knowing, if they were all marked urgent, which was the most urgent, and which should be advanced before others?—Yes.

722. That is not a question of staff but of departmental knowledge?—Yes.

723. Would any increase of the Contract staff improve that?—No.

724. (*Mr. Gibb.*) When did you foresee the necessity for mule harness?—Months before, directly the question of war in South Africa was mooted.

725. (*Sir George Clarke.*) If these ordinary requisitions were under your own control, it would affect, would it not, the time of the delivery as far as you are concerned, because the most pressing things would be proceeded with first, would they not?—Yes.

726. At present does the Director of Contracts choose as best he can which work to put out or to get in first?—Yes.

727. If these matters were under you, you would say, "Keep back that contract and get on with another matter," and so on?—If they had been under the Director-General of Ordnance, he would never have put that item as to harness out to contract at all; he would have ordered us to do it in the departmental workshops; he would have known it would have been impossible to get the work done by contract.

728. And that, of course, would affect the time of delivery very materially, would it not?—Undoubtedly. At that period, at the beginning of October, orders were given out for mule harness, thousands of sets, for ten-span and other mule harness. This was a question of converting certain harness we already had in store, and we only wanted certain material purchased or made. Then we could have readily done the rest.

729. In which case the regiments would not have gone out without transport?—That is so.

730. (*Colonel Miles.*) The amount of correspondence between you and the contractor is very great, is it not?—Yes.

731. Arising incidentally on a large proportion of the contracts, I suppose?—Yes, on a large proportion of the contracts.

732. They constantly come backwards and forwards to you more or less on some point or another?—Yes.

733. Does that take up a considerable amount of your time?—A considerable amount. Every contract, when its date of completion is up, has to be reported to the Director of Contracts, and he then communicates with the contractors.

734. With regard to the question of slings, was it anticipated that there would be a difficulty in getting web slings when they sent out stretchers without slings?—They were sent out without slings because the difficulty had arisen; they could not get the web slings which I had demanded, but it was two months before I knew of it.

735. Had that matter been under your own control, you would not have sent them out without slings?—No, I should have got leather slings.

736. (*Sir George Clarke.*) As I understand, you did not know of the want?—No.

737. Otherwise you could have supplied the deficiency, I understand?—Easily with leather slings—as I did when I knew of it.

738. (*Colonel Miles.*) With regard to the date of contracts, urgent contracts you mark with a date, do you not?—Not with a date; we say, "as early as possible."

739. Generally speaking, do you think advantages would result from your being brought more into direct communication with the contractors?—I feel sure of it.

Colonel John
Steevens, C.B.
15 Jan. 1901.

Colonel John
Stevens, C.B.
—
15 Jan. 1901.

740. (*Sir Charles Welby.*) You have a great variety of stores under your control at Woolwich, have you not?—A great variety.

741. The Committee have heard a great deal about the absence of technical knowledge as to stores in the Contract Department, and the disadvantage which ensues from that. I should be glad if you could tell the Committee to what extent you and your staff have that technical knowledge as to this great variety of stores, the absence of which is such a drawback to the Contract Department?—There are two kinds of technical knowledge—there is the technical knowledge which has to determine on the qualities of steel or wood or the way things are put together; there is also the technical knowledge of being aware for what purposes a store is used, and, if that store cannot be obtained, what would be a suitable substitute for it. For the first, it is technical knowledge of materials and workmanship; that would not be immediately with me, but would be in the possession of the Inspection Department which is alongside me. With regard to technical knowledge as to the use of stores, I have that entirely in my own branch.

742. I do not quite follow what you mean by the use of stores. Will you please explain?—Take this case: I wanted a number of felling axes and hand axes for the manoeuvres this summer, and I asked that 2,000 might be bought at once. The Director of Contracts sent a gentleman in the country to buy them, but it appears he did not know what he was going to buy, because he wrote and said that it would be well if we would give the trade description of this article when we were going out to purchase; if he had known that they were to be wedge axes, he could have made better arrangements for purchase. That is an instance of technical knowledge which, simple though it may appear, is very necessary. In the same way I asked for the purchase of some sledge hammers. I said 12 lbs. or 14 lbs.—any sledge hammer they could get; but when the gentleman arrived at Birmingham he telegraphed to the Director of Contracts asking if they should have a round face or a flat face, and it was telegraphed down to me at Woolwich, "What sort of sledge hammer shall we buy?" That is technical knowledge.

743. And is there someone in your branch who would have this trade knowledge as to this particular class of sledge hammer?—Yes.

744. From having been employed in the trade or having gained experience in your branch?—From having gained experience in our branch.

745. Which an officer in the Director of Contracts Department might equally gain by experience, I suppose?—Yes, if he had served some 10 or 20 years in my department.

746. But you do not take into your department only people who have already experience in these particular trades, do you?—No.

747. They learn their business, I suppose, in your department?—Yes.

748. Where are they recruited from?—Chiefly from the Royal Artillery.

749. Would he have to receive a technical training, the result of which would be that he would have that knowledge?—He would now have a technical training both as to material and construction and its uses, because every officer who comes into the department now has to pass through the Ordnance College, and is, therefore, thoroughly trained on all points of technical knowledge.

750. Every Ordnance officer?—Yes.

751. (*Sir George Clarke.*) Might we not take the case as to the mule harness as a case in point; your department would contain people who would know exactly what was meant; while, on the other hand, in the Contract Department, it would be nothing more to them than a mere expression on paper?—Yes, that is so.

752. (*Chairman.*) Is not the fact then, this: that your people as regards technical knowledge, actually see the goods which are delivered, while the Contract Department buying the sledge hammers, harness, and so on, does not actually see the articles?—Quite so.

753. They only see the papers about them?—They only see the papers about them.

754. Your man would know the kind of sledge hammer because he had seen so many of them put into the store?—Yes, and seen them used in the field.

755. (*Mr. Gibb.*) Could the Committee see the requisition for these hand axes which you have mentioned?—Yes. I think it was in the form of a letter and not written on the usual requisition form.

756. If you ask for a hand axe simply, is it not natural the seller would want to know what kind of hand axe?—Then, I say we must employ a man who knows the Service terms and who knows what he is going to buy.

757. Or you should specify exactly what you want?—It is difficult to teach a man as he starts out on an expedition what it is he is going to buy. We assume everyone in the War Department dealing with these things knows what he is talking about.

758. (*Chairman.*) Surely if you commissioned any agent to buy a hand axe and gave him an explicit description, he would know what to buy, would he not?—When you are talking about War Office materials and using the terms laid down in the vocabulary of stores, we assume they know exactly what is meant.

759. It is their business to know that vocabulary, is it?—Yes.

760. (*Mr. Mather.*) And if not, they ought at once to ask for a more full description?—Yes.

761. If you had been simply asked the question you could have given the details as to it, I suppose?—Certainly.

762. (*Sir Charles Welby.*) I understand there are two alternative methods of effecting such a transfer as has been suggested; one is to transfer the Director of Contracts' Department to the Director-General of Ordnance, the other is, so to speak, to break it up and give part of the work to the heads of different factories and so on; which of those two alternatives do you advocate?—The decentralising system.

763. And that you yourself should have the control of the contracts which touch your particular branch of the work?—Yes.

764. Would you propose, under such a system, that you should have complete discretion in making your own purchases, or that you should be subject to the view of the Director-General of Ordnance?—Subject to his view undoubtedly, and subject to a limit; but he being my absolute master I know his views and should act up to them by referring everything that I considered he would wish to know about to him, regardless of limit—undoubtedly I should have a limit.

765. Do you contemplate a branch in his office here in Pall Mall to which you could refer when occasion arose?—Yes, but it would be one of his branches and it would be actually referring it to him.

766. Such a system of decentralisation would not enable you to dispense with a central contract branch of some kind in Pall Mall, would it?—Certainly not.

767. (*Sir George Clarke.*) But that would be a reviewing branch which saw that you performed the contract according to the requisition, would it not?—No, it would be a branch under the Director-General of Ordnance.

768. But the other branch you mention would be an independent branch, would it not?—No.

769. (*Sir Charles Welby.*) Supposing the whole thing was transferred to the Director-General of Ordnance, do you still think it would be necessary, say, in the case of the clothing factory and ordnance factory, to have a reviewing branch at the elbow of the Director-General of Ordnance?—Undoubtedly.

770. Are you quite clear, under those circumstances, that such a change (though perhaps it would ensure more harmonious relations between yourself and the Contract Branch in Pall Mall) would necessarily conduce to greater celerity of action and simplification. Would it make much practical difference to you that you would have to refer your contracts to a branch in Pall Mall under the Director-General of Ordnance instead of, as now, to a branch in Pall Mall under the Financial Secretary?—I think it would be a great advantage.

771. On the ground that there would be more harmony of purpose?—Not only that, but the Director-General of Ordnance having more knowledge of the subject would be able to realise my reference much quicker than the Director of Contracts would.

772. (*Mr. Beckett.*) You say that the Director-General of Ordnance knew it was impossible to get harness made by contract. Why should not the Director of Contracts have known that as well?—I take it the Director of Contracts did not realise sufficiently the absolute importance of getting these sets of harness converted quickly, and therefore he took the routine method of sending out tenders to contractors.

773. Was it not anybody's business to impress on him the absolute importance of it?—I think we must all imagine that every branch of the War Office in an emergency like that is well acquainted the exigencies of the Service. We cannot be writing minutes upon every requirement, indicating the excessive importance of it; we must assume that all the branches know their work, and that they are acquainted with the circumstances of the case.

774. But does not it rather assume that there is a flaw in the system somewhere when you state that it was with regard to a very important matter this mistake occurred?—Yes, I consider the Director of Contracts does not realise the necessity of departing from routine. I have an instance in a case with regard to signal rockets, which were telegraphed for from the Cape, and it was two months before we got them. It was an article which could have been manufactured in a very short time by one or two firms.

775. And you think, do you, it would be a better arrangement if these matters were under the Director-General of Ordnance, who would realise the military necessities of the situation?—Certainly.

776. You say you know the requirements of the Army. May I ask you by whom you are informed of these requirements?—I know from my own knowledge gained by experience.

777. Are requisitions made to you from different departments?—They are made from all over the world, for equipment, for armaments, for submarine mining stores—every store that is used by the Army, from a barrack-room broom to a torpedo.

778. And you are the best person you think to decide on their relative urgency. You have more knowledge as to the relative urgency of these things than anyone else, you think?—I should think so.

779. Would it not be well if you were allowed to make recommendations to the Director of Contracts as to which demand should be first taken up and put in hand?—I could not; I have not the time.

780. (*Chairman.*) But you mark requisitions "urgent," do you not?—Requisitions which are urgent I mark "for earliest possible provision."

781. (*Mr. Beckett.*) You say the Director of Contracts does not look upon these things with the importance you do sometimes?—I am of opinion he does not.

782. And you say, in time of stress, routine and red tape should be overthrown. We all agree that that should be done, but who is to take the responsibility of overthrowing the routine?—I would myself.

783. Supposing you were to take the responsibility yourself at the present moment and you were to act on your own responsibility, what would happen; what position would you find yourself in?—It would be pointed out to the Director-General of Ordnance that I had exceeded my powers.

784. (*Mr. Mather.*) Who would point that out?—The Director of Contracts would point it out.

785. (*Mr. Beckett.*) To the Director-General of Ordnance?—Yes.

786. Under an ideal system, would you propose that an officer holding your position should be able at his own discretion to break through routine, giving explanations afterwards?—Certainly, and I am sure no question would be raised by the Director-General of Ordnance.

787. If the system was under his direction, do you mean?—Yes.

788. You say that contracts would be more expeditiously put through, probably, if you were put into direct touch with the contractor after his tender had been accepted. Is that your opinion?—I am in touch with the contractor after the tender is accepted up to the period when the default commences.

789. I understand you said it was not in your power to say, "If you cannot supply me with black, you can supply me with brown"?—I can communicate with

contractors up to the date upon which the contract should be completed, regarding the contract made, but the supply of "brown" instead of "black" I could not deal with.

790. (*Mr. Gubb.*) Do you mean up to or after the date?—Up to the date. If the contract is for 20,000 articles by the 1st March, I can communicate with the contractor up to the 1st March; directly after then it becomes a default, and it goes to the War Office, and I can communicate no further. So that if he has not supplied the articles and I want, say, two of them, I cannot even telephone to the contractor and ask for two to-morrow. I can only communicate and hasten up to the limit of the contract period.

791. (*Mr. Beckett.*) By what means do you hasten; only by remonstrance, I suppose?—That is all.

792. In case of emergency you do send and do what you can to get the things hastened, I suppose?—Yes, up to a period.

793. According to your scheme, do you propose you should supersede the Director of Contracts altogether; that he should be eliminated, as it were?—Yes, that he as a distinct branch should be eliminated, and his duties given over to the various chief supplying departments.

794. Who will deal direct with the Director-General of Ordnance and be responsible to the Director-General of Ordnance?—No. There is the Quartermaster-General and the Inspector-General of Fortifications, who would be quite apart, of course.

795. With regard to your own department, would you eliminate the Director of Contracts?—Yes.

796. Why did the Director of Contracts think you wanted tent pins when you did not; how is it possible for a question of that kind to arise?—I cannot say. I had demanded so many million.

797. Then, again, you said you put in a demand for 20,000 packing cases, and it was cut down to 7,500. On whose responsibility was that done?—No; what I may have said was that it may have been a contract for 20,000 and 9,000 only delivered, but I do not remember to have said it.

798. Who is responsible for continuing to give contracts to inefficient firms?—The Director of Contracts.

799. Are you of opinion that in certain cases it would be better to have more frequent interviews instead of so much correspondence between the heads of departments and the Director-General of Ordnance. You have referred to the correspondence which goes on backwards and forwards for years (and I observed in Mr. Brodrick's Committee that point was brought forward and mentioned), whilst an interview occupying 10 minutes might settle the matter?—In my case that would not be so, because I am situated at Woolwich.

800. Do you think your limit of 25*l.* for making purchases might with advantage be extended?—Yes.

801. Have you any particular sum in your mind?—No I have not; it would depend upon whether it was under the Director-General of Ordnance or otherwise.

802. I suppose all previous occupants of your present position have found the same difficulty in dealing with the Director of Contracts?—Yes.

803. Is it a general complaint?—It is a general complaint. The limit until recently was 10*l.*, when it was raised to 25*l.*

804. And is it the general opinion that it should be still further raised?—Yes.

805. (*Mr. Mather.*) Will you kindly explain in what such a paltry sum can be spent, and for what period of time it lasts?—It might be a year; for instance, there may be a small piece of wire whip-cord used for range-finding instruments. We may get that from a different man to the man who supplies the instruments, and probably they only cost 3*d.*, so that it would take a long time to spend 25*l.* on that.

806. Do you mean you are not allowed to spend more than 25*l.* on one article without permission, but that you may spend many times 25*l.* on many articles?—That is a doubtful question. I have seen two rulings on it. I have spent 25*l.* on different articles, and I was told that that was not intended, that I must not split purchases up into items, and spend 25*l.* on each, but if my requirement was so much, and it came to over 25*l.*, I must send it to the Director of Contracts. On the

Colonel John
Stevens, C.B.

Colonel John
Stevens, C.B.

15 Jan. 1901.

other hand, I have seen a ruling from this office that the limit at home is 10l. on any one article.

807. So that on a 1,000 articles you can spend 10,000l. ?—Yes.

808. (*Mr. Gibb*.) Is that a ruling of the Director of Contracts ?—I cannot say ; I do not know who ruled it.

809. (*Mr. Beckett*.) May I take it the summary of your experience is, that contractors do not come up to time, that no penalties to speak of are imposed, and that contracts are continually given to defaulters ?—That is what I think I have stated.

810. (*Mr. Gibb*.) Are you connected by telephone with the Director of Contracts' Office ?—No.

811. (*Sir Charles Welby*.) But you are with the building in which he sits, are you not ?—No, I am with the Director-General of Ordnance. There was a question

The witness withdrew.

Col. F. E.
Mulcahy.

Colonel FRANCIS EDWARD MULCAHY is called in and examined.

815. (*Chairman*.) You have been Chief Ordnance Officer, I believe, at the Royal Army Clothing Department since 1898 ?—Yes, since December 1898.

816. And you are charged under the instruction of the Director-General of Ordnance with providing clothes for the Army ?—That is so. Until I took over office in 1898, the Director of Clothing was a civil officer under the Financial Secretary, but since that time, it has been under a military authority.

817. That is to say, that you make requisitions for material to the Director of Contracts ?—Yes, I requisition for material and for the making up of that material into garments, also for mess tins, boots, and other articles, which are purchased ready made from traders.

818. And the Director of Contracts would refer to specifications for these various articles, I presume ?—Yes, in putting out his tenders he would refer to the specifications.

819. The specifications, of course, being made by the inspecting officers ?—Yes, by the inspecting officers.

820. In your opinion, are there any delays in complying with the requisitions when you make them, over and above the necessary delays involved in advertisements and tenders ?—No, I have no glaring instances of delays of that sort. In some cases, of course, during the war period, it has taken rather longer than ordinarily to put out tenders, but I have no very strong cases of that sort—three weeks or so would be the average time taken in placing contracts.

821. During what period ?—The war period.

822. There has been delay in getting the tenders out ?—For getting the tenders out.

823. Of course, in a period of war, there is great pressure ; but, in normal times, are you of opinion that your requisitions are dealt with in the Contract Department with reasonable punctuality ?—Yes, with reasonable punctuality.

824. If you recommend—and, I suppose, you have in certain cases—that orders should be placed in a particular quarter, and the Director of Contracts places the order in another quarter, does he do that in consultation and in agreement with you ?—Yes, he would not necessarily follow my recommendation.

825. But if he departed from your recommendation, he would do so in agreement with you, would he not ?—Yes.

826. (*Mr. Gibb*.) Do you make recommendations of that sort ?—The Director of Contracts rather objects to sending the schedules of tenders to me for my observations, because he says it wastes time.

827. (*Chairman*.) When you make a requisition for a particular kind of cloth, is it not the practice that sometimes you recommend that that cloth should be got from one, two, or three firms ?—I should not do so unless the schedule of tenders is referred to me, and it is not referred to me as a rule now ; that is to say, I do not know what the tenders are.

828. When you ask the Director of Contracts to supply you with so much cloth or serge, do you add to that request that you recommend it should be procured from A, B, and C ?—No.

asked about a contractor failing, and there was a point raised about difficulties which I understand the Contract Branch have on account of the pattern of stores, upon which I should like to say a word.

812. (*Chairman*.) Do you mean on account of variations made during the progress of the order ?—No, on account of the fact that we did not conform to trade patterns.

813. Are you responsible for patterns ?—No, the Director-General of Ordnance. We have had experience where offers have been made to trade patterns.

814. (*Mr. Gibb*.) Very little difference in pattern would make a difference to the manufacturers, would it not ?—But we have had an offer of pickaxes to certain trade patterns for delivery, 10,000 in six weeks, and in eight months we have got about 4,000.

829. You make no recommendation ?—No, unless a firm has taken pains in preparing a pattern or something of the sort ; then I should say that they have done so, and, I think, they should be given some preference in the distribution of the order.

830. Then, as a rule, you make no recommendation ?—None.

831. And you are only in special circumstances consulted ?—Only in special circumstances. That is a point, of course, on which the Director of Contracts and myself do not agree. I consider, after I have made my requisition, and the tenders have been received, and schedules made of those tenders, that they should be referred to me for my opinion as to what the distribution of the order should be. It may be a large order for 200,000 yards of serge to be distributed over certain firms. Then, I should like to make my recommendation as to the allocation of that order, but the Director of Contracts rather objects to my doing so, because, he says, he considers it unnecessary. Both the inspecting officer and myself should have a good deal to say, I consider, on the allocation of orders.

832. That is to say that the Director of Contracts makes the allocation entirely himself ?—Yes, and we do not consider that he attributes sufficient importance to time in the allocation of contracts ; he places orders with firms who are already overloaded. I do not propose to trouble the Committee much with instances, but I have one case here which has given me a good deal of trouble concerning greatcoats and cloaks, which are very much wanted in consequence of the war. On the 10th February last, a contract was made, of which 20,900 were given to a firm who already had orders for 248,000 garments, and were 80,000 garments in arrear. 6,300 were given to a second firm, who had 59,000 garments under order, and were 14,000 in arrear. 11,400 of those greatcoats and cloaks which were urgently wanted at that time were given to a third firm, who had orders for 240,000 garments, and were 80,000 in arrear. If those tenders had been referred to me, I would not have acquiesced in the orders being so placed.

833. (*Sir C. Welby*.) Could you have suggested other firms ?—I should have suggested going outside the country if the firms in England could not have done it ; as it was we had to go finally to Canada.

834. (*Mr. Mather*.) Were you seriously delayed in consequence ?—Yes, to this day, I have not sent as many cloaks to South Africa as are required.

835. (*Chairman*.) Then is it your opinion, that if you were consulted in the allocation you would know more than the Director of Contracts does about houses which have already more orders than they can deal with ?—Yes, and I think also the Chief Inspecting Officer should be consulted, because he would be able to say that such and such a firm had not satisfactorily carried out their recent contract, and he would be able to give his views as well.

836. In the case you have mentioned, and when you say you would recommend going outside the country, I suppose the Director of Contracts is bound, as a general rule, to buy in the country, all articles that can be bought in it ?—He would have to refer to the Financial Secretary, I think, before he could go outside

the country. In the matter of spurs we have had great difficulty. We have never been able to get enough spurs in the country, and I recommended going to France and Germany, but he would not do so.

837. Do you think, although there are delays on the part of contractors, that on the whole the work is put through with reasonable promptitude?—Yes, with reasonable despatch, considering everything concerned.

838. Then you would hardly argue, yourself, that much would be gained in the way of despatch if the system was changed, and and if you yourself, under the authority of the Director-General of Ordnance, were allowed to make the purchases?—Not as a general rule in contracts, but, of course, I should be able to close a bargain very quickly if I had an advantageous offer, which can hardly be done at present.

839. I put the question in the assumption that, if a change were made in the present system, you would be still bound by the general system of tender?—In that case I do not think I could make any saving of time in ordinary times in putting out tenders.

840. The system whereby Government Departments purchase under tender has been laid down by Parliament, and it is not a thing which can be readily departed from?—Assuming we should have to follow that system, I do not think we could do it much quicker.

841. That is on the question of despatch. Do you think if you were entrusted with purchases you would get a better or cheaper article or that it would come to very much the same thing as at present?—I do not think we should get better articles, probably not cheaper; we should simply get the things more to time. That is the great drawback to the present system, that our contractors are never up to time or within reasonable distance of time.

842. That is to say, if you dealt with the contractors themselves, you think you could make them more punctual?—We could make them more punctual.

843. Would you propose to do that by enforcing penalties more rigorously?—I should begin by enforcing penalties more rigorously; but I think after a time it would be rarely necessary to enforce penalties, as soon as they become aware of the fact that they were likely to be enforced.

844. I suppose you have had no outside experience in the business world of the possibility or otherwise of enforcing penalties on contractors?—No, I have no outside experience of that sort.

845. The question of enforcing penalties is everywhere found to be a very difficult problem. However, you yourself have a general opinion that, if the penalties were in your hand, you could enforce them more rigorously?—Yes, that is so. I may say that I have prepared a list of the cases in which the arrears were over 200*l.* in value for last year, which I can hand in. The total number of instances in which fines could have been levied were 288 last year, and the number of full fines inflicted was five, and modified fines 20. When I say modified fines, I mean that out of 71*l.*, 10*l.* has been demanded; out of 42*l.*, 15*l.*; 10*l.*, out of 22*l.*; 5*l.*, out of 9*l.*, and so on. The Director of Contracts has modified the fines to that extent in 20 of those instances. The total value of the fines was 7,809*l.*, which could have been levied, and 316*l.* was actually levied.

846. You do not actually recommend penalties, I understand, but when there is a delay in any article being delivered, or when it has not come up to quality, it is then for the Director of Contracts to levy the penalty which has been incurred?—Yes, it rests with the Director of Contracts.

847. Does he consult you about remitting or modifying penalties?—As a rule not—I cannot remember an instance when he has done so; as a rule, I make a report and he puts his remarks on the paper.

848. You do not know the reasons for his coming to any decisions?—As a rule I do.

849. Does he communicate his reasons to you?—Yes, he passes his paper to me.

850. But the decision is final before you see it?—Yes.

851. Do you consider the reasons as a rule sound?—In many cases I should possibly be inclined to agree with him, but in other cases I think he is too lenient. There may of course be reasons over which the

contractors had no control, when I should agree in limiting the fines.

852. When the penalty takes the form of buying in default, are you consulted?—No, I can hardly remember a case in the short time I have been there.

853. It is not a usual practice?—No; clothing is different from ordinary stores in that respect; it is easier to obtain as a rule. It does not take so long to get it in one form or another.

854. But you have considerable complaint to make of delay on the part of contractors, have you?—Yes, there is very considerable delay on the part of contractors. On the first of this month, with regard to boots—a very important thing—out of 480,000 pairs of boots due from contractors, 273,000 or considerably more than half were in arrears of contract. I should have had all those boots in store if the contractors had kept their promise.

855. Could you give the Committee a return for the year 1898 of the proportion of delays to the number of requisitions which emanated from you—the delays beyond the contract time?—I am afraid that would embrace nearly every contract; there is hardly a contract in which the contractors deliver up to time.

856. Even with the ten days' grace?—Yes; hardly a contract. I do not write as a rule formal minutes of complaints to the Director of Contracts, but I send him a statement as occasion may arise, either of arrears on the part of a certain contractor, or as to a certain article, and I say at the same time I am very badly in want of these things. There were 267 of those statements sent last year.

857. (*Mr. Mather.*) Covering how many articles—100 or 50?—It would cover possibly 200 articles.

858. (*Chairman.*) In sending in your requisitions, I suppose you do not as a rule state that you want such and such an article at a given date, but you state you want it as early as possible?—As a rule I give the date—that is the difference between my practice and that which possibly obtains in the Store Department. If it is a demand for a year's requirement of cloth, I should say: "I require it in equal monthly deliveries from April to December." If it is a matter of 100,000 mess tins, which I want in three months, I should say, "These are wanted in three months, in equal weekly deliveries from the date of the receipt of order."

859. You never fix a date, I suppose, with which it is impossible to comply?—I should put: "Within three months, if possible." I have an instance in which I asked for 275,000 pairs of boots and shoes to be delivered within 2½ months if possible. We only had tendering for 68,000 of those boots in that period.

860. (*Mr. Gibb.*) In that case what date did the contractor accept?—The contractors were told to deliver in three months, and they only tendered for 68,000 within that period.

861. (*Chairman.*) You then said: "Three months, if possible"?—If possible. By wiring to some of the contractors we found out what their difficulties were, and we afterwards got the boots. That points to another matter which seems to show rather jealousy on the part of the Director of Contracts of the Department in dealing with the contractors, because he objected to my telegraphing to the contractors, and finding out the difficulties of the contractors, and he stigmatised my action as "unnecessary and irregular," which seemed to me a peculiar way of doing business. It was my effort to find out the cause of the delay, and the Director of Contracts thought it "unnecessary and irregular" of me to wire to the contractors to find out.

862. According to that it seems to be your opinion that if you were put into closer touch yourself with the contractor, business would go through in certain cases more expeditiously?—Any difficulty would be found out at once.

863. I think you said previously if you were entrusted with the power of purchase you did not think there would be any material advantage in the matter of time and despatch over the present system?—I understood the question to refer to the getting out of the tenders and getting them in again.

864. What you complain of is, is it not, that you are not in a proper position to place an order?—That is so. I am cut off from the contractors, and the Director of Contracts seems to think that in communicating with contractors, I was going outside my province.

Col. F. E. Mulcahy.

15 Jan. 1901.

Col. F. E.
Mulcahy.
15 Jan. 1901.

865. To hasten up a contractor to see how his order is getting on, you have to go the Director of Contracts?—Yes, as a rule. I do hasten contractors frequently, but, as a rule, I go to the Director of Contracts.

866. I understand that you do hasten them in the public interest frequently, but that in doing so you are going outside your province?—Yes; if I wish pressure brought on a contractor, I should report and say, "This is how the matter stands."

867. Is that the proper proceeding?—The proper proceeding.

868. But sometimes you are so put to it that you rather take it upon your own shoulders to hasten him up?—I frequently do so.

869. Do you think things would work more satisfactorily if you were allowed, as a normal state of things, to deal with a contractor and hurry him up yourself?—Yes, quite so.

870. And if you were put into touch with him when the contract was made until the time of delivery?—Yes; I do not know that the Director of Contracts has formally objected to my doing it, but he seems to be inclined to object to my communicating with the contractor.

871. (*Mr. Beckett.*) With regard to the 267 complaints which you say you made, I suppose you suffered long before you made those complaints?—I do not leave it too long before crying out. I do not cry out without necessity.

872. Does that mean that in every one of the cases you wanted pressure brought to bear on the contractors by the Director of Contracts?—Yes.

873. Did you hear whether he brought pressure to bear on them?—Yes, in every case I think he wrote, but the pressure I wished him to bring was that he should have officials who would go round and see what those men were doing, and if they had taken up more remunerative work. That leads up to a subject which I should like to refer to at a little length, because it was originally proposed by me that travelling inspectors should be appointed under the Director of Contracts. In February last I wrote a long minute to the Director-General of Ordnance pointing out the difficulties we had had in getting many things, and pointing out that where I had defied the rules, and sent my clerks or my factory manager into the City to ascertain where the things could be got, or what was the difficulty in getting them, I was always able to do business. That occurred in many cases. When khaki serge was first approved for the Army, I sent an inspector round and told him to buy from many firms. That was going over the head of the Director of Contracts, but by doing it we got a certain amount of serge which we should not have got otherwise. The Director of Contracts did not take kindly to my suggestion which I put forward, and rather opposed it; he said he could not see the necessity for it, and a correspondence ensued. The Director of Contracts said: "We do not need the assistance of inspectors or store officers to bring us into touch with the trade; it is not one of their duties and they are seldom in a position to render us any help."

874. (*Mr. Gibb.*) What was the date of that suggestion?—February 1900. Of course before the war I had not been driven to sending people out to do business. Eventually on the 10th June, the Secretary of State approved that inspectors should be appointed, and left it to the Director of Contracts to make his application for these gentlemen.

875. (*Mr. Beckett.*) Did he make any appointments?—The application went forward last month, and has just been approved by the Treasury, which, I think, shows, although the Director of Contracts objected, the benefit which is likely to accrue; practically it has been forced upon him.

876. Then is it your opinion that they are in a position to render help?—They would be of admirable assistance; they would be a connecting link which is badly wanted. At present the contractor has to run about between the Director of Contracts, my office, and the Inspector's office; he does not know who is to blame when he cannot get his business through, I cannot give any decision, it has to go the Director of Contracts, though I know what I want and when I want it. A contractor never knows where he is because I can never decide anything.

877. Do you consider that the absence of these inspectors has been a frequent cause of delay?—I think they would have been in a position to open up new sources of supply in the early part of this War, if they had gone to a big clothing firm in Leeds, for instance, and said, "This is a national matter, cannot you take up this Government work? You are not used to seeing these formidable looking forms sent out by the Government, but they are not so bad as they look at first sight." I think if that had been done many firms would have taken up the work. I know when my clerk went into the City for shirts which I wanted badly, he went to a big firm and said, "Did not you get an inquiry form from the Director of Contracts?" "Yes," was the reply, "but we put it into the waste paper basket." That was a matter which only wanted explaining; as soon as he found we were ready to do business with him in a business-like way, we got the shirts.

878. Do you consider the present arrangement for securing an excellent quality of goods satisfactory on the whole?—Yes. I think the inspection very good, in peace time it is strict, of course, in war time we have slightly relaxed our inspection, not as regards serviceability, but in little details which do not affect the serviceability of articles. I am not responsible for inspection.

879. Have you any suggestion to make with regard to the inspection which might improve it?—No, I think it is very well done. The patterns of clothing are settled by the Adjutant-General.

880. (*Sir C. Welby.*) As to the proposal for instituting travelling inspectors, did you propose that those inspectors should be under the control of the Director of Contracts?—Yes, and, I may say, I suggested they should be practical business men, acquainted with the trades and business houses they would have to deal with.

881. Supposing that the procedure could be tightened up by appointing these travelling inspectors or in other ways so as to reduce to a minimum delays on the part of the contractors, do you see anything inherently unsatisfactory in a system under which a separate department of the War Office makes your contracts for you?—I think it is unsatisfactory in this way, that where you have a high official, hedges are sure to grow up where none were intended to grow originally, and that such a system cuts the supply officer off from the contractor. That is what I feel, and have felt strongly, right through the war.

882. And the appointment of these travelling inspectors would remove that difficulty, you think?—It would to a great extent, because, he would come to my office and find out what I wanted.

883. (*Colonel Miles.*) That is providing the Director of Contracts allowed him to have access to you?—Of course, I assume that would be part of his business.

884. (*Sir G. Clarke.*) The proposal to have travelling inspectors originated with you; it was on the whole resisted by the Director of Contracts and practically forced upon him—is that so?—Yes, I think that is a fair summary of what happened, as shown by the papers. The Secretary of State showed great willingness and on the 10th June he practically approved of travelling inspectors being appointed, and asked that the application for them might be referred to him.

885. It is your opinion that there would be no great value in those inspectors attached to the Director of Contracts' office unless they were brought into close touch with you, so as to learn from you your requirements before they proceeded on their peregrinations throughout the country?—That is so.

886. You regard that as essential, I suppose?—Absolutely essential.

887. Then your main complaint at the present moment is that you do not find the Contract Office sufficiently in touch with the manufacturers?—Not sufficiently in touch; they seem to me to work entirely by a list which they send round, and if firms choose to tender, they tender, but if they do not they do not, and the matter rests.

888. Are you responsible for the manufacture of clothing?—Yes, in the clothing factory.

889. Not its quality?—Not its quality. I may say I am the head of the clothing factory as well as the supply officer.

890. You have constantly, I suppose, to make promises as to dates of delivery of clothing for the Army?—Yes, the clothing must be ready when it is wanted.

891. Do you find difficulty in fulfilling your promises arising out of the great delays in delivery and in rejections?—Yes, during the war period; I had not had much difficulty before.

892. Generally, do you think on the whole that your powers are not quite adequate to your responsibility?—Yes, that is so, as regards contracts.

893. Apart from the general question of any decentralisation of contracts, do you think it should be within your competence to send your officials to any place at any time to ascertain how your orders are proceeding?—I think those officials might be, in my case, officials of the Director-General of Ordnance, and not exactly serving under my orders, but in close contact with me.

894. And of course their going would be initiated by you?—Quite so.

895. Up to the present time has the Director of Contracts objected to your making any inquiries as to the progress of your orders?—Yes, he has done so.

896. (*Mr. Mather.*) The stores you have charge of consist of those manufactured by yourself as the Pimlico factory, I assume?—Both those and those supplied by the trade.

897. Have you charge of clothing, ready made articles?—Yes; in the case of garments the material is first supplied to me, inspected, issued on payment to the contractor who makes it up. That is in the case of garments, but in the case of boots we buy them ready made to specification.

898. Then all the stores of ready made clothing are manufactured under direct instructions from yourself as to the material employed?—Yes.

899. When clothing is issued to a military district in the country, what happens in case repairs have to be done; are they all done in the locality? Does clothing ever come back to you under any circumstances for repair?—No. I may say that the issues are made direct to the units, not to the district.

900. And with that the Director of Contracts has nothing to do, has he?—He has nothing to do with that.

901. I take it from your observations in the early part of your examination, that you have no general complaint to make as to the relations now existing between your department and that of the Director of Contracts, except that there is not sufficient unity of purpose or co-operation between you. You would not care, in consequence of any difficulties now existing, to become yourself the purchaser of all the stores you require, would you?—I should be prepared, and rejoice to see some such system adopted.

902. You would prefer that system, would you?—Yes.

903. Are you fairly satisfied with what is being done now by the Director of Contracts as to the time of delivery and the quality of work you receive?—What I wished to convey was, that I did not think in the matter of placing orders that any absolute saving of time, as a rule, would be ensured by my taking up the work; that is to say, the Director of Contracts places orders with reasonable despatch, as far as I am concerned.

904. Therefore you are reasonably well supplied?—Yes, in normal times.

905. (*Chairman.*) I think you left us under the impression that no change would make any material difference, both in respect of the reasonable despatch of business, except as regards hurrying up contractors, or in respect of the cheapness and quality of the articles?—As to the cheapness and quality of the articles, it would not.

906. (*Mr. Mather.*) And as regards time?—I did not mean to convey that impression.

907. (*Chairman.*) There were two questions: one that you were satisfied the department dealt with your requisition sufficiently quickly?—Yes.

908. But you are not satisfied that they exact sufficient punctuality from the contractors, and you think, if you dealt with the contractors yourself, you could get greater punctuality in the delivery of the orders?—

That is so, and also in the placing of the orders I think I should be consulted.

909. (*Mr. Mather.*) Therefore, if close co-operation existed between you and the Director of Contracts, you would facilitate the delivery of goods to yourself to a very great extent. You have complained, have you not, that there was no reference to you after a certain time?—Yes.

910. Suppose the system was so far relaxed that the Director of Contracts was obliged to consult you, or had to receive your reports afterwards, and had to act upon them, to a great extent, would that remove your difficulties?—It would still leave the contractor with three people to deal with, as it were, which I do not think is satisfactory.

911. I understood your chief complaint was that you did not come into contact with the contractor, and if you had power to do that through the Director of Contracts, it would facilitate your work?—The Director of Contracts would not be obliged to follow my recommendation; he might take a line of his own which might not suit me.

912. But, if your opinion had to be decisive, it would satisfy you, would it not?—Yes, but then there would be no need for the Director of Contracts.

913. (*Mr. Gibb.*) You told the Committee of contracts being let to three firms, although they were very much in arrear with existing contracts?—That is so.

914. Do you know whether the Director of Contracts was aware when he let those contracts that those firms were so much in arrear as you have told us?—I think he could hardly have been entirely ignorant of it. He gets periodical statements from me with regard to the condition of contracts which should have given him the information. I should think the Director of Contracts was aware that they had a great many garments to make and were possibly in arrears.

915. I wanted to know whether it was a case of his thinking the firms could supply the things, or whether it was a case in which he went wrong owing to the system under which he gets information about the execution of contracts?—My complaint there rather was, too, that he placed those orders with those firms without referring to me. I could have told him. I stated that in support of my contention that all these tenders should be referred to me before the order is given.

916. Do you report to the Director of Contracts every case where deliveries are not made within 10 days of the contract date?—No.

917. What cases of delay do you report to the Director of Contracts?—Periodically, I take the most important stores and send him a statement of the whole condition of the contracts, probably once a quarter. But if I am pressed for a particular thing, I send him a statement of a certain firm's arrears.

918. Do you give him periodical returns of the deliveries under current contract?—Yes.

919. So that he has, in his office, information as to contractors who are in arrear, has he?—He should have all that in his office. It may not be exactly up-to-date, but it is within a reasonable period. The statements, of course, are very lengthy ones to make out.

920. You said that 288 fines could have been imposed in the year 1900, did you not?—Yes.

921. Have you got with you the number of contracts issued in that year?—No, I could not tell you the total number of contracts made in the year.

922. Can you give us any idea what proportion the 288 would bear to the total number of contracts?—The total number of contracts for the period referred to was 3,655.

923. I suppose those are cases where the delays were over 10 days?—Yes, and arrears of over 200% in value.

924. The inference from that figure is, is it not, that all the other contracts, except those 288, were punctually performed?—Yes, or it may be there was reasonable cause for not even suggesting fines; for instance, I may have been short of material, which may have delayed a contractor, or something of the sort.

925. (*Chairman.*) In that case, the occasion for a fine would not arise, would it?—It would not arise and could not be enforced.

Col. F. E. Mulcahy.

15 Jan. 1901.

Col. F. E.
Mulcahy.

15 Jan. 1901.

926. (*Mr. Gibb.*) You spoke about going to firms and explaining to them that the clauses in the tender forms sent out were not so bad as they looked?—Yes.

927. Do you consider that the clauses inserted in the Army contracts are of an unnecessarily forbidding nature?—I would not say that they were unnecessary, but to an ordinary business man accustomed to dealing in a business way, they would appear so at first sight. On seeing this form it appears to him he is bound by all sorts of conditions to which he is not accustomed. I gather that from what is stated by my officials who have had interviews with various contractors.

928. Will you let the Committee see a copy of the form of contract?—I have not a form of contract with me.

929. Your answer would rather suggest that there are clauses which would deter responsible firms from tendering?—No, I did not say the clauses themselves are unreasonable, if a man will take the trouble to read them, but the form looks formidable.

930. (*Mr. Mather.*) It is the legal phraseology they do not like, I suppose?—Yes.

931. (*Chairman.*) Does it not come to this, that as to a great many firms it is not in their usual way to take up an order when they get a circular. Circulars of all kinds are habitually disregarded, and firms sometimes do not consider real business is meant till someone calls on them and arouses attention and interest, or until they receive a definite request in writing to quote, which is very different from a general circular?—That is what has struck me; the Director of Contracts does not get into personal contact with new contractors.

932. (*Mr. Gibb.*) Do you suggest your department should undertake the duty of purchasing?—I think it would be a very great advantage to the State.

933. Would it satisfy the object you have in view, if your department had complete freedom of going to contractors, and on to contractors' premises if they pleased, and were made responsible for the execution of the contracts after they had been made with the Director of Contracts?—I think the travelling inspectors should have the power to go to the factories and see what work was being done.

934. But the travelling inspectors will be under the Director of Contracts, will they not? What I rather suggest to you is that the responsibility for the execution of the contracts should be placed with your department immediately on the making of the contract instead of as at present when delivery is tendered?—Would that imply that we should inspect the goods in the process of manufacture?

935. Or to take any steps you pleased. Take, for instance, the cases you have named to us. The Director of Contracts sends you a copy of the contract when it is entered into, does he not?—Yes.

936. If from that date you were at liberty to communicate with the contractor, and take such steps as you pleased to watch progress and secure delivery,

would not that satisfy your object without transferring to your department the actual duty of making the purchases?—It would be a step in advance.

937. Do you see any advantage in transferring, not only the duty of seeing to the execution of the contracts, but also the duty of sending out tenders and making the purchase?—Yes, I think if I had the sending out of the tenders to the firms, they would only have one man to deal with, instead of having two as at present. They have now to deal with me when it is a question of delivery; they have to go to the Director of Contracts when it is a question of price; and to the inspector on a question of quality.

938. If there were only two parties, the Supply Department and the contractors, the whole business would be practically under the control of one department, would it not?—Yes, the department which is responsible for supplying the Army with goods.

939. So that, whether checks be necessary or not, there would, under that proposal, be an entire absence, would there not, of the check imposed by several departments having to be consulted?—I think checking might be obtained, as in the case of accounts, by reviewing the action on contracts—they would be all subject to review, and be dealt with if there was anything wrong. I should always have to justify my conduct in the case of giving a contract to a firm who had not tendered lowest, or something of the sort.

940. Do not you think there would be some danger of a department being suspected by the public of having too great a power, if they had the purchasing and the dealing with all stores?—I am afraid the suspicion of the public would not affect me if I could get the stores to supply the Army.

941. But is it necessary, do you think, for you to take over the whole burden of buying as well as dealing with the execution of the contract? Of course the two things are totally different, are not they. The Director of Contracts may make a contract, and if it is at once referred to you, you would have the entire responsibility of seeing that its terms are carried out. Do not you then place yourself in as strong a position to secure delivery as you would be in, even if you made the purchases yourself?—In the matter of bringing pressure to bear, of course I should be in as strong a position.

942. As regards the selection of firms to whom the order is to be given, you suggest, I understand, that the Director of Contracts should communicate with you before placing the contract?—Yes.

943. Do you suggest that you should be in a position to dictate to the Director of Contracts, or he to you—as to the firm to be selected—after consultation?—I think, where we disagree, it might be referred to the Director-General of Ordnance, who is really the responsible officer. I, of course, am only his servant. If the Director-General of Ordnance and the Director of Contracts do not agree, at present it goes to the Financial Secretary.

The witness withdrew.

FOURTH DAY'S MEETING.

THIRD DAY'S EVIDENCE.

At the War Office.

Wednesday, 16th January 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Colonel CHARLES MOORE WATSON, O.M.G., examined.

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

944. (*Chairman*.) You have been, I think, Deputy Inspector-General to the Inspector-General of Fortifications since April 1891?—I have not been Deputy since 1891, but I was at first Assistant. I came to the War Office for duty with the Barrack Loans at the end of 1889, and when the Barrack Loan of 1890 was passed I became Assistant Inspector-General in the Branch. I held that office for five years, and I was then made Deputy and head of the Branch, and have held that post now for nearly five years, since the 30th of April 1896.

945. I believe you are acquainted with General Sir Richard Harrison's evidence before the recent Committee on War Office Contracts?—Yes, I have gone carefully through the evidence.

946. I think I will ask the Secretary to read you the questions and answers in that evidence, Nos. 5468 to 5492, and I will then put it to you whether you have anything to add in explanation of the evidence there given, or if we may take it that those questions and answers embody a clear and comprehensive account of the system?—The answers are very nearly correct. There are a few points that are not quite clear.

947. The Secretary will read them. I have a list of the answers that it struck me wanted slight alteration; they are very few.

(*The Secretary*.) It begins at Question 5469 with the Chairman's question. (*Chairman*.) The Committee is desirous to obtain some information with regard to the method of dealing with contracts; I understand that all building contracts are carried out under the supervision of your Department?—(A.) They are. (Q.) Do the contracts themselves come before you before acceptance?—(A.) Yes. Perhaps, in regard to that, I had better explain the process. I can do so very shortly. (Q.) If you please?—(A.) The process of contract is a little complicated, perhaps. First, with regard to the home stations, there are five different descriptions of contracts for works. First, there is the contract for three years, which is called the triennial contract for repairs, painting, and small services not over 400*l.* in value. (Q.) That is 400*l.* in value for any one item, is it?—(A.) For any one service, yes. Then, secondly, there is what is called the lump-sum contract for works over 400*l.* Thirdly, there is what is called the measurement contracts for those same works over 400*l.* (Q.) Do those apply to new works mainly?—(A.) All those would be new works. (Q.) I take it, the first item you gave us would be in the nature of maintenance and repairs, and so on?—(A.) Yes; and small new services. Then the second and third would be entirely for new works, although, occasionally, they might be for re-construction of a barrack. Fourthly, there are contracts for painting, what we call maintenance, also over 400*l.* And, fifthly, there are contracts

for stores and materials over 50*l.* in value. The system in regard to these contracts is as follows:—

(*Witness*.) Might I stop there for one moment? There are, of course, contracts for stores and materials under 50*l.* The only difference is that, if it is over 50*l.* it has to go to the Director of Contracts, but if it is under 50*l.* the General Officer of the District can accept it, or the Inspector-General of Fortifications can accept it, so that it is not quite right to say that they are only over 50*l.* because we have under 50*l.* also.

(*The Secretary*.) "The system in regard to these contracts, is as follows:—No. 1, that is what we call the triennial contract, is taken by open competition, advertisements are put out in the district concerned; and the others 2, 3, 4, and 5, are arranged for, as a rule, by limited competition, that is among contractors who, either in answer to advertisement, or on their own application, have been placed on lists, and have been approved by the Director of Contracts. Occasionally these contracts are also put out to open competition, and settled by the Director of Contracts. (Q.) You distinguish between what you describe as open competition and the other form of competition which is more limited, the distinction being that the open competition is carried out by advertisement, is that it?—(A.) By advertisement. (Q.) Specifications for which may be seen, I suppose, at your office?—(A.) Yes. (Q.) And the other, of course, is the more restricted competition of invitations to firms who are, as you describe it, on the list?—(A.) Yes. And lately, owing to the decentralisation arrangement which has been made, Generals are allowed to arrange contracts up to 2,000*l.* in value, that is to say, they not only make the arrangements for advertising and so on, but they are allowed to open them, and select the contractor, in fact make all the arrangements."

(*Witness*.) Might I make one remark about that? It is said in answer to Question 5476, that the specifications are seen at our office, but as a rule for all large contracts the specifications are not seen at our office, but at the office of the Commanding Royal Engineer of the district. If I might very shortly say what the system is, most of our contracts for Loan Works are lump sum contracts, and, after the specifications and drawings have been finished and approved, the bills of quantities are taken out in the district when one copy of those bills of quantities are priced by the Commanding Royal Engineer at the prices in the triennial schedule. The other copies, which are unpriced, are sent to the contractors by the Commanding Royal Engineer, who does all the work up to the moment of calling for tenders. Then in the case of contracts above 2,000*l.*, those tenders are sent in to the Director of Army Contracts, and the same routine is followed if it is under 2,000*l.*, except that the tenders

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

are sent to the General Officer Commanding. It is rather an important point, because it strikes us all that it would be much simpler if all the tenders were sent to the General Officer Commanding. Perhaps I might explain that a little later.

948. (Mr. Mather.) Leaving out altogether the Director of Contracts?—Yes, it only takes time.

949. But you mean leaving out altogether the Director of Contracts?—Yes.

(The Secretary.) “(Col. Lockwood.) In their district?—(A.) In their district; but in all other cases the General only makes the arrangement for tendering, and then the tenders are sent direct to the Director of Army Contracts in London. (Mr. Herbert Lewis.) In what particular cases did you say the Generals can arrange contracts up to 2,000l.?—(A.) Up to 2,000l. in value. (Q.) Not limited to any particular class of cases, but simply limited to amount?—(A.) In all cases up to 2,000l. (Chairman.) I understand that in such a case the tender would not go prior to its acceptance to the Director of Contracts’ Department at all?—(A.) No. (Q.) But it would be dealt with entirely and solely on the responsibility of the General with any assistance he might have?—(A.) The General of the district is responsible. (Q.) Just in order to clear up Mr. Lewis’s point, do you mean it in this wide sense, that apart from the class of work, all contracts up to 2,000l., may be, and are so dealt with?—(A.) Yes, they may be, but up to the present they have not been largely dealt with, because the regulation has only been lately made owing to what they call the Decentralisation Committee. (Q.) Would that apply to stores as well as to works?—(A.) Yes, in the district. I will describe a little more about stores later on.”

(Witness.) That answer is not quite correct; it does not apply to stores. The General Officer Commanding has only power to accept contracts up to 50l. in the case of stores. So that as I heard it put the other day, if the General buys bricks and mortar put together in the shape of a building, he has power up to 2,000l., but if he has to buy the bricks separate he can only buy 50l. worth without referring to the Director of Contracts. It is one of those small matters that sometimes give us a good deal of unnecessary correspondence.

(The Secretary.) “(5485.) Would that be what you call discretionary with the General to determine whether he should deal with it or whether it would go to the Director of Contracts?—(A.) All under 2,000l. the General could deal with, but it is optional.”

(Witness.) We take it that in no case is it optional; that the General is bound to deal with it under 2,000l.

950. (Chairman.) Is it understood, that he will?—Yes, that he has power. Of course he will take the power if he has got it.

951. Will he? Will all Generals do so?—He might refer it to us, but we would not refer it to the Director of Contracts. We look upon it as out of the purview of the Director of Contracts if it is under 2,000l.

(The Secretary.) “I want to put it a little higher. When you say ‘could,’ does it follow that he would?—(A.) I understand by the regulation he could, if he liked, deal with it in the ordinary way by letting it go to be examined and discussed, and remarked upon by the Director of Contracts. That has not been really largely done; I only mention it because it is one of the new regulations. Then abroad the same procedure is carried out, except that the General there deals with all contracts without the intervention of the Director of Army Contracts, and all that the Director of Army Contracts has to do is to criticise what has been done afterwards. He can find fault; a report is made to him, and he can find fault if there is anything wrong afterwards. (Q.) That is to say, he may draw attention to any points which, in his opinion, might have had more attention given to them, but it would not be in his power to alter contracts already made?—(A.) He could not alter them. Then I got to the supervision of contract work. Shall I go on? (Q.) If you please?—(A.) The supervision is the same abroad and at home; that is to say, all of it is under the officers and foremen of works and men of the Royal Engineers. In cases of local supply, works and materials are carefully inspected by the Royal Engineers, and if not up to specification rejected. This rejection is very often made, and no difficulty is experienced, as a rule, in regard to replacement. Then

if work is found defective it is condemned, and has to be done over again. We do not find any difficulty in either case, either in replacing stores or in re-doing bad work. Then the intricate part is in reference to stores. In case of stores or materials, a certain number are ordered in the Inspector-General of Fortifications’ office for abroad, and occasionally for home stations.”

(Witness.) With reference to that question, I would remark that sometimes very great difficulty is experienced in getting contractors to replace bad material and bad work, and there are considerable discussions between them and the Commanding Royal Engineer. Moreover, in some cases the contractor complains to the Director of Contracts, and a long correspondence takes place, but in the end we get the bad work replaced.

(The Secretary.) “(5489.) Would you just give us, roughly, an indication of the kind of stores?—(A.) They are special stores that they order, chiefly ironwork, that they could not get abroad, and special fittings. (Q.) That is for building work?—(A.) For building work; it is all building stores; we are not dealing with any other stores but building stores. (Colonel Lockwood.) Girders, and brackets, and pillars?—(A.) Fittings for lavatories and all that kind of thing are specially made, and by ordering them at the central office you get the very best, the very latest pattern, and the best you can get. (Sir Robert Reid.) Would that include merely houses, or does it include such things as bridges or materials for fortifications?—(A.) Oh, yes, everything; fortifications certainly, and everything. I was just going to go on with the method of getting those stores. In the case of special ironwork, that is what you are mentioning, bridges and so on, and portions of fortifications, orders can be given in what is called the Iron Structures Branch, the Inspector-General of Fortifications’ office, up to 100l. in value. Between 100l. and 300l. tenders are called for from a list that is kept in the Inspector-General of Fortifications’ office. And then the tenders are sent to the Director of Contracts, with recommendations. Above 300l. drawings and specifications are prepared and forwarded to the Director of Contracts, and he calls for the tenders, usually open competition. Then as to supervision and inspection of such contracts (that is, ironwork and special stores), the ironwork is carried out partly by the officers of the Iron Structures Branch, and they are assisted by a certain number of specially-enlisted warrant and non-commissioned officers who live in the different trade districts. These men make test reports, which are sent to the Inspector of Iron Structures, and all important work is also inspected by that officer himself. He also visits during manufacture, as far as he possibly can.”

952. (Chairman.) May we take it, generally, from the evidence that has been read to us that, as regards buildings, the General in a district does deal with contracts up to the value of 2,000l.; in regard to stores, up to the value of 50l.; and that, both as regards buildings exceeding 2,000l. and orders for stores exceeding 50l., the Director of Contracts makes the contract on your requisition, your department having received a demand from the district?—No, our demand goes to the Director of Contracts in the case of buildings, direct; that is to say, the General Officer calls for the tenders, and orders them to be deposited in the tender box at the War Office. In the case of stores, the General Officer calls for the tenders, and sends the tenders up to us; we then have to send them to the Director of Army Contracts, with a recommendation; the Director of Army Contracts sends them back to us, either agreeing or disagreeing, and we then send them back to the General of the district; so that sometimes it takes considerable time for the transaction to be concluded. And if the amount is over 50l., by a few shillings even, the Director of Contracts calls us to account if we have not submitted it to him. For instance, I have a case here of some stores that were ordered in our own office; the bill came to 50l. 8s., I think, and when the bill was passed the finance branch found it was 8s. over 50l., so it was referred to the Director of Contracts to know if he should not have approved it before it was passed; then the Director of Contracts approved of it, and it went back to us; so that there have been a good many minutes on the paper because it was 8s. over 50l. In another case where it was a few shillings over 50l., the General Officer wrote to us; we had to write to the Director of Contracts; the Director of Contracts wrote back to us, and we had to write back to the General Officer before he could get his stores.

Col. C. M.
Watson,
C.M.G.

18 Jan. 1901.

953. (*Mr. Gibb.*) Were these cases where the General Officer had accepted the contract, knowing it was a few shillings over?—He could not accept it; he had not yet accepted it; he wanted to accept it. He had the tenders, and the lowest was just over 50l. but he wanted the power to accept it, and he had to refer it to us. That, of course, takes a considerable time, and causes great delay.

954. (*Chairman.*) About how long a delay does it cause?—I should think it would take at least a fortnight.

955. That is to say, the limit of power up to 50l. is rigidly enforced?—It is rigidly enforced. Our contention is that if the General has the power up to 2,000l. in the case of building works, there is no reason why he should not have it in the case of stores also.

956. To keep to the question of building works, for the moment, before we come to stores, I understand that the General in the district, if he wished to have works over the value of 2,000l. carried out, would not communicate with the Director of Contracts through you, but would communicate direct with the Director of Contracts?—He does not communicate with him at all. He tells the contractors to send the tenders to the Director of Contracts, and he sends a letter at the same time, to say that he has called for those tenders.

957. He calls for tenders?—He calls for tenders to be delivered at the War Office, but he has no communication with the Director of Contracts.

958. And you are advised at the same time that he has called for those tenders?—We are advised that he has called for tenders at the same time that the Director of Army Contracts gets the tenders. Perhaps you would like to see it exactly. That is the letter (*handing in the same*) that the Commanding Royal Engineer sends to the War Office.

959. Advising you?—Yes.

960. Then is it the Director of Contracts who himself decides which tender is to be accepted?—No, he refers it to us.

961. He refers it to you in every case?—He refers it to us in every case. That is an instance in the same case of his reference (*handing in the same*). He has received the tenders, and tabulated them. It was a simple case that I thought would show it, where there was no discussion.

962. I see this is noted on behalf of the Director of Contracts: "I propose to accept the tender" of so-and-so?—That is referred to us.

963. Asking for your concurrence or otherwise, for your observations?—Yes. Then when the tenders are received, he sends the bills of quantities of the lowest tender, and they are examined in our office to see if there is any mistake in them; then, before making our recommendation, we look through them and send them back, and if there is any small error we call the attention of the Director of Contracts to it.

964. But the point I want to get at is this: When the tenders come in is it practically you, and not the Director of Contracts, who determines which contract shall be accepted?—Except in this case: that, supposing we thought the lowest tender ought not to be accepted, we would probably have considerable discussion with him. Supposing, for some reason, we thought that the lowest tender was not the best for the public service, the Director of Contracts always, of course, wishes to accept the lowest tender; and then there might be a considerable number of minutes on the paper before we came to an understanding.

965. Would you come to an understanding by mutual arrangement, or would the Director of Contracts, as it were, over-ride you, and insist upon the lowest tender?—It is very rare that it happens; I do not think I could instance a case in my branch. But I think if we were in disaccord it would be referred to the Financial Secretary.

966. He would be the arbitrator?—Yes, he would be the arbitrator. Theoretically it is the Secretary of State for War who arbitrates.

967. But usually he delegates that power, in the first instance, to the Financial Secretary?—Yes. As a fact I cannot remember a case.

968. (*Mr. Gibb.*) Is that because the Director of Contracts rarely over-rides you, or is it because you

rarely propose to pass over the lowest tender?—That is the reason; but of course it may happen that when we examine the lowest tender we find such mistakes in the bills of quantities that the tenderer is raised above the lowest tenderer.

969. (*Chairman.*) Then he ceases to be the lowest tenderer?—Then he ceases to be the lowest tenderer. Then in that case the Director of Contracts writes to the lowest tenderer to know whether he will stand by his price, and at the same time we get the bills of quantities of the next tenderer and examine them; and in a case of that sort, of course, it takes some little time before the final decision is arrived at.

970. (*Mr. Mather.*) The end of it all being that you accept the lowest tender, if you are satisfied that that tender contains all the provisions that you require to have carried out in the work?—Yes.

971. (*Sir George Clarke.*) The Director of Contracts has no possible means of checking any of the objections that you raise to the taking of a certain tender?—None; he has no technical knowledge.

972. He therefore cannot check independently any of the objections that you take to any tender?—No.

973. Therefore, you get your way, simply because it is impossible, in the long run, for the Director of Contracts to answer you?—In one or two cases there may be a difficulty. We have a case at the present moment; it is rather a curious one. The lowest tender was, I think, 13,900l.—I speak without being quite sure of the figures: the next tender was about 15,700l. When we examined the bills of quantities of the lowest tenderer, we found he had made a mistake of 300l. against himself. The Director of Contracts sent the tender back to him, to ask whether he wished to correct it. In returning it, he sent back to say that he had made several other very serious mistakes, and that his tender was 15,100l., or thereabouts. I have put it to the Director of Contracts that I do not think we should accept a contractor who does his business so carelessly. Supposing that he had made a few more mistakes, he would not have been the lowest tenderer. He is not a contractor who like very much; he has given us a good deal of trouble in other places; and I daresay we shall have some discussion upon the subject before we come to an agreement. I only instance that as a case where we do not simply accept the lowest tender; but have to have some considerable discussion first.

974. (*Mr. Beckett.*) That case is pending now?—That case is pending now.

975. (*Chairman.*) Then, I take it that your objections to the lowest tender are generally founded upon your knowledge of the contractor who puts it in, and because you have reason to be dissatisfied with him?—As a rule, every contractor on the list is supposed to be competent, but some are better than others. We know that with one contractor we have a little trouble.

976. If a man has been worrying you?—We would rather not have him. This contractor I have been speaking of, I know can do good work, but he gives us an immense amount of trouble. We would, of course, rather have a contractor that went quickly and steadily about his work, and gave no trouble.

977. Has the Director of Contracts any knowledge of the expedition and punctuality with which these various contractors perform their work, or have you more knowledge as to that?—All the knowledge he has is from the reports which he receives through us. At the end of every contract we get a completion report, stating how the contractor has done his work—whether he has been dilatory or given trouble: and, of course, we pass all those reports to the Director of Contracts to see.

978. Then the Director of Army Contracts is practically put in possession of all your knowledge as regards the contracts?—Yes, all; we tell him everything.

979. Then he would have quite as much knowledge as yourselves for the purpose of discriminating between contractors. Supposing there was anything against the contractor who put in the lowest tender, he would know all that man's record as well as you do?—Yes; he keeps a record, at least, I believe he keeps a record.

980. You supply him with the information?—We supply him with all the information; he sees every completion report.

981. Then, as regards the system, it approximates very much, I believe, to the system carried on in

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

certain railways where tenders are called for by the engineer's or other departments, and are returnable to the secretary's department?—Yes, but, of course, it differs in one respect, that we look upon the officer corresponding to the engineer of a railway company as being the Commanding Royal Engineer; he is the man who is really responsible for the due execution of the work, not the Inspector-General of Fortifications, who, of course, is not in the district; and the official who corresponds to the manager of a railway, or whoever would open the tenders, is the General Officer in the district.

982. (*Sir George Clarke.*) In other words, the analogy of the railway applies to the district?—The analogy of the railway applies to the district more than to the War Office generally. We cannot, of course, be responsible for the due execution of the contract; that must rest on the Commanding Royal Engineer.

983. (*Mr. Mather.*) After the Director of Contracts has given his sanction to a tender—say the lowest tender which you have sanctioned after having revised it—what power has the Commanding Royal Engineer over the execution of the work?—He has to see that it is carried out in accordance with the specification and the drawings.

984. And in such a case has the power to have the work re-done if it is badly done?—He could have the building taken down altogether; the whole power rests with him.

985. You said a little while ago that one objection to not having the contracts made by yourselves in the district was that while you had power over contracts up to 2,000*l.* made by yourselves, you had not the same power over contracts given to the contractors by the Director of Contracts?—Yes, we have the same power exactly.

986. That was in relation to stores only?—Building works and stores.

987. With regard to works you have the same power whether you give the order or the Director of Contracts gives it?—Absolutely. That is the form of tender (*handing in the same*), and you will see the whole power is given to the Commanding Royal Engineer, with power of appeal to the Secretary of State in case of a difference of opinion.

988. Therefore, there is no difference whatever in the final execution of the work, whether you give the contract, or the Director of Contracts gives it?—No, none at all.

989. (*Mr. Beckett.*) Does the Commanding Royal Engineer supervise the work while it is in progress?—He is responsible for the execution, but he has officers under him; perhaps he will have two or three officers under him, and they are constantly on the watch, and he goes round every now and then to make sure that everything is going on rightly.

990. (*Chairman.*) With regard to the analogy between the War Office and a railway company, I am still inclined to think that the analogy between the War Office and the secretary of a railway company may hold after all. You say it would hold rather with the district, but with a railway traversing several counties there are organised sections, and the tenders do not go to the engineers of the sections; they go to the head office in London, or wherever the head office may be?—Then that would correspond with the War Office.

991. (*Mr. Gibb.*) But the Inspector-General of Fortifications is the departmental head of the Commanding Royal Engineer?—I think, perhaps, the analogy is more between the War Office and other public offices. If, for instance, you take the Admiralty; in the Admiralty you have the Director of Works, who has charge of all works executed under the annual estimates. He accepts all his own tenders without reference to the Director of Contracts. Then you have the Engineer-in-Chief for Naval Loan Works, who has the power of accepting all tenders without reference to the Director of Contracts.

992. Without pressing it too far, it was only on the question of fact. You suggested that the secretary of a railway company was analogous to the Inspector-General of Fortifications, and that the engineer was analogous to the Commanding Royal Engineer?—Then the Commanding Royal Engineer would not be; it would be the Inspector-General of Fortifications. I was rather looking at the district as the unit; that is to say, each General of the district is responsible for his own expenditure.

993. I think the point put to you was this: that in the case of an ordinary business, the tenders go for acceptance to a different department from the department seeking the work; they do not go to the head of the department requiring the work done?—That would be analogous to our present system.

994. (*Sir George Clarke.*) Except that the unit for the expenditure up to 2,000*l.* is the district?—The unit for expenditure for the whole amount is the district.

995. I mean to say the unit for unchecked, uncontrolled expenditure, is the district?—It is the district.

996. (*Chairman.*) Yes, the district in this case?—Yes.

997. (*Col. Miles.*) A contract for 2,000*l.* would be a Part I. service?—Yes.

998. The original authority for spending that money would come direct from you?—Of course; the authority for all expenditure would come direct from the War Office.

999. It is not given on the sole authority of the General Officer Commanding?—No, he can only accept the contract if the money has been authorised.

1000. (*Chairman.*) Is there any delay, in your opinion, in the Contracts Department in dealing with the tenders when they come in, or does the Director deal with them pretty promptly?—I think he deals with them pretty quickly. Of course there must be a certain amount of delay in having to go to two offices in place of one.

1001. But beyond that?—No, I do not think he delays the work at all. I think we all try to get through the work as quickly as we can in all the offices. The delay is only due to the references from one office to another.

1002. Still, keeping to the question of works, as regards inspection, your department has a staff both to control works when building, and to inspect works when finished?—That is in the district.

1003. In the district?—Of course; in addition to that I go round as much as possible, but I cannot see every work while it is absolutely in construction.

1004. But, in the district the General has a staff to inspect works during progress, and to pronounce upon them when finished?—Yes; he has a staff consisting of the Commanding Royal Engineer, who has under him several division officers of the Royal Engineers, and they have clerks and foremen of works under them, who are constantly on the work.

1005. And that is a recognised duty?—Yes.

1006. Now, with regard to penalties in the case of works, if works are in delay—I am not talking now of bad work which is pulled down, but, if works are in delay beyond the time in the contract, are penalties enforced?—The penalties are not often enforced. The system has always been to consider, after the contract is completed, how much time has been lost through the bad weather, and due to strikes and such causes, and that amount of time is generally given to the contractor.

1007. That is *force majeure*, as we may call it?—Yes.

1008. But, when there is anything other than this, what is the practice?—After that the matter is considered, and in some cases the fines are enforced, or enforced at a reduced rate; in other cases they are remitted. Each case is considered on its own merits.

1009. And who considers whether a fine is to be enforced or not?—The Inspector-General of Fortifications in concert with the Director of Contracts.

1010. They agree?—They agree.

1011. If there was any difference, what would be the procedure?—It would go to the Financial Secretary, but, as a rule, we come to an agreement. There have been one or two cases where the General Officer and the Inspector-General thought the fine ought to be enforced, and the Director of Army Contracts was rather in favour of letting the contractor off.

1012. But in all those cases you could appeal to the Financial Secretary?—Yes; but, of course, the question of fines is rather a difficult one; if they were always rigidly enforced the chances are that all the tenders would be higher, and the contractors know that the case is considered so that it is a sort of balance of advantages; if you were always determined to inflict the fine, I have no doubt all tenderers would allow for it,

1013. Then the Secretary of State, acting through the Financial Secretary, is brought in in the last resort to decide on the balance of considerations?—Yes, if necessary. I cannot remember a case in my branch where we have not come to an agreement.

1014. Are there many complaints about delays in the completion of works?—A certain number. It depends—some contractors are very good and always up to time, and other contractors are always tending to be too late.

1015. Does it appear to you that contractors generally are reckless about engaging to complete works by a certain time?—I would not say they generally were. Some of them are reckless, and others are very careful. We put in the time that we think the work ought to take, and on several occasions contractors have written in to say that they hardly think the time sufficient.

1016. Do you occasionally modify the time?—Yes. Supposing we had put in a time of 15 months, if there was a consensus of opinion among contractors that 18 months would be better, there is no hesitation at all about altering the time to 18 months.

1017. (*Mr. Gibb.*) Then do you always specify the time of completion?—We always specify the time of completion.

1018. That is not left to the contractor, or settled by the Director of Contracts?—Oh, no; the Director of Contracts has nothing to say to that at all. In some cases, when it was necessary to get the work done very quickly, we have told contractors that, and asked them what time they could do it in, and then, in accepting the tender, we take into account the contractor who said he could do it in the shorter time, and paid him a little more.

1019. (*Chairman.*) You paid him a little more to get the work done quickly, saving interest as it were?—Yes, and not only saving interest, but getting accommodation for the soldiers, which is sometimes most important.

1020. (*Mr. Mather.*) Might not the quality of the inspectors, whom you employ as clerks of works during construction, materially affect the question of how soon the contract would be finished?—I do not think so, because it rests with the division officer more than with the foreman of the works.

1021. But the division officer is your officer?—Yes.

1022. Then does not the efficiency of your division officer affect the question of the time within which the contract would be finished?—It may.

1023. It does so in ordinary buildings?—Yes; everyone is not exactly of the same capacity.

1024. And have you sufficient supervision of that character?—Yes.

1025. (*Chairman.*) When it is a case of bad work and new work has to be put in, if there is any difficulty, and the contractor refuses to do it, who settles it?—There is in the contract a final appeal to the Secretary of State for War. The Secretary of State for War may, under a clause of the contract, appoint an independent adviser, but he is not bound to appoint an arbitrator.

1026. If he does not appoint an arbitrator, what happens?—He can settle it absolutely, and the contractor has no redress except to go to law.

1027. But when you say the Secretary of State settles it, as a matter of fact is it the Director of Contracts and your department that settle it?—The Director of Contracts in concord with the Inspector-General of Fortifications.

1028. The Inspector-General makes a recommendation?—Yes.

1029. And if they differ, then again the Secretary of State or the Financial Secretary would pronounce between them?—Yes. You would perhaps like to see the clause in the contract; it is clause No. 16 (*handing in the same*).

1030. I will read it out so as to get it on the notes, Clause 16. "If any difference or controversy should arise between the contractor and the superintending officer or the Commanding Royal Engineer such difference shall immediately after it has arisen be referred to the Principal Secretary." And we mean by the Principal Secretary?—The Secretary of State for War.

1031. "Whose decision shall be final and binding; but, if so requested by the contractor, before giving his decision, the Principal Secretary may appoint one or more competent persons, as he may think fit, to investigate and report upon the matters in dispute; the expense of such investigation being charged to the War Department or to the contractor at the discretion of the said Principal Secretary."—So that the Secretary of State has absolute power, and the only redress that the contractor has is a law suit.

1032. Are there many arbitrations under this clause?—Very few. We have had one or two; we have one going on now; but they are very rare. I think I have only known about four or five in the last 10 years.

1033. To turn from works to stores. As regards stores, the Generals in the districts can only order up to an amount of 50*l.*, which limit is rigidly enforced?—That is to say 50*l.*, if there is not what we call a running contract. For certain classes of stores of which we use a good many, such as grates, drainage fittings, and such stores, we have running contracts, and the Generals can order up to any amount on those running contracts, because the contract has already been made. But where there is no running contract, the General only has power to order up to 50*l.*

1034. Is that 50*l.* on one article?—50*l.* on one order.

1035. He may place as many orders of 50*l.* during the course of the year as he thinks fit?—Yes; but practically they would be all for different articles from different contractors.

1036. Then I understand you to make two complaints as regards this regulation: First, that the limit is very low, secondly, that it is quite out of proportion to the limit of 2,000*l.* for works?—Yes.

1037. In your opinion what would be a satisfactory limit?—I do not quite see why there should be any limit. I should make it the same.

1038. The same in the case of stores as in the case of works?—Yes, 2,000*l.* Of course in that case also the General would have to send up, after he had concluded his tender, the list of tenderers, and if he had not accepted the lowest tenderer he would have to give good reasons for showing why he had not done so.

1039. That is to say, he would be reviewed by the Director of Contracts?—Not by the Director of Contracts, but by the Inspector-General of Fortifications. In the case of a 2,000*l.* contract, when he has accepted it he sends up a list of the tenderers exactly the same as I showed you for the other tenders, and if he has not accepted the lowest, he gives his reasons.

1040. (*Sir Charles Welby.*) That is in the case of tenders up to 2,000*l.*?—Yes.

1041. (*Chairman.*) Then both as regards tenders up to 2,000*l.*, and as regards stores, the General is practically reviewed by the Inspector-General of Fortifications?—Yes.

1042. I also understood you to say that you thought the limit of 50*l.* was somewhat illogical and absurd, inasmuch, as the General could not order bricks and mortar separately to the amount of 50*l.* 10*s.*, though he might order bricks and mortar in the form of a work up to the amount of 2,000*l.*?—Yes.

1043. But is that a practical inconvenience, or is it merely theoretical?—Sometimes it is a real inconvenience. Sometimes the General is very anxious to get these things quickly, and, of course, having to go twice round, as it were, first from the Commanding Royal Engineer to the Inspector-General, and then from the Inspector-General to the Director of Army Contracts, and then back, does cause sometimes inconvenience.

1044. (*Sir Charles Welby.*) Were these two limits of 2,000*l.* and 50*l.* respectively, fixed as the result of the Decentralisation Committee?—The 2,000*l.* was, but I think the 50*l.* was in existence beforehand.

1045. It was not touched by it?—I think not.

1046. (*Mr. Mather.*) Do you keep a depot of stores in your district?—Each district has a depot; but the amount of stores that is kept is very small, because, as a rule, so far as my branch is concerned, the stores are worked in at once.

1047. So that you have to be continually sending orders?—Yes.

1048. (*Chairman.*) Sir Richard Harrison, in his evidence before the Select Committee on War Office

Col. C. M. Watson, C.M.G.

16 Jan. 1901.

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

Contracts, in his answer to Question 5491, stated:—
“ Fittings for lavatories, and all that kind of thing,
“ are specially made, and by ordering them at the
“ central office you get the very best, the very latest
“ pattern and the best you can get.” I understand
from that evidence, that in Sir Richard Harrison’s
opinion, ordering the stores from a central contract
department, at any rate, stores of the kind he specified,
led to the very best and latest patterns being secured
for the public service?—We are always trying,
naturally, to get the best and latest patterns, but we
give this information to the Generals in the districts,
and by the central office keeping a record, of course
every district gets the benefit of the experience of every
other district.

1049. That is to say, the central office brings together
and focuses all the information of the districts, and
then puts out these demands to a wider market than
any single district could do?—In some cases. In
certain cases, I think, it would be better for the dis-
tricts to order direct; I believe they would get them
nearly as well.

1050. Nearly as well?—Yes, and, perhaps, in some
cases quite as well, and with less trouble.

1051. But, on the whole, do you think that getting
them through the central department leads to their
being procured better?—Of course, the greater part of
the stores that are ordered in our office are for foreign
stations. If, for instance, at Gibraltar, they want
drainage fittings or lavatory fittings, they have no
means of ordering them from a contractor at home, so
they simply send a demand on us, and we send them
out.

1052. That refers to foreign stations?—Nearly the
whole of the stores that my office is concerned with,
that are ordered in our office, are for foreign stations.
We order hardly anything for home stations.

1053. Then, as regards foreign stations, some kind
of central office would have to be kept up?—It is
necessary.

1054. (*Sir George Clarke.*) You are that central office,
of course?—We are that central office. All orders for
stores required for barrack loan works at foreign
stations come to our office.

1055. (*Chairman.*) But I understand you to say that
the Director of Contracts in his central office gets
together and keeps together all the information?—No,
we keep the information. Supposing that we wanted
to order, say, girders for Hong Kong at a cost of 200l.,
we draw up the specification, and get the tenders, and
then send them over to the Director of Contracts with
a recommendation as to which should be accepted, and
he accepts it.

1056. Then you are practically the central office
for the information?—Absolutely, except for the
acceptance of the tenders, so far as barrack loan works
are concerned. We have three branches, of course,
in the Inspector-General’s office; the fortifications
branch, the annual estimates barracks branch, and
the loan branch, but a good deal of the information is
kept by the Chief Surveyor, who works under the
three branches.

1057. To turn to the inspection of stores. As
regards works, you have told us that in the districts
there is a regular staff under the Royal Engineer
officers who watch and control the progress of the
work during its execution. As regards the stores, is
anything of that kind done; do you simply wait until
the stores are delivered, and then inspect them?—In
certain cases we send a surveyor down to see them in
the process of manufacture.

1058. Is that an understood and recognised pro-
cedure?—Yes, it is a part of the duty of one of our
surveyors that he has to sign the bill before it is paid
to show that the stores have been inspected; it is part
of the certificate on the bill. For instance, lately, we
have been sending out a large quantity of doors and
window frames to Mauritius for new barracks there,
and those, of course, would be inspected in the process
of manufacture, before they were sent out. It is part
of the duty of the central office.

1059. And as regards penalties in the case of stores,
are they settled in communication with the Director
of Contracts?—Always; everything of that sort is
settled in communication with him.

1060. With an appeal to the Secretary of State if
there is any difference?—Yes.

1061. Do you think that there would be any advan-
tage if the officers of the Inspector-General of Forti-
fications Department themselves bought the articles
and stores which they required instead of going to
the Director of Contracts to effect the purchases?—
We practically now do everything except actually accept
the contracts.

1062. You are practically the buying branch, but
the clerical work is done by the Director of Contracts?
—All that is done by the Director of Contracts is to
accept the contract and write to the contractor. The
general division of labour between us, so far as
my branch is concerned, is, that all communi-
cations to the Generals of the districts go from our
office, and all communications from the War Office
to the contractors go from the Director of Contracts’
office, so that the acceptance of a tender to con-
tractor goes from his office. The Director of Contracts
then informs us that he has written to the contractor,
and we upon that write to the General, and send a copy
of the accepted tender to him. But the general division
of labour, is, that we write to the General, and he
writes to the contractors.

1063. (*Mr. Gibb.*) Is that answer confined to corre-
spondence in connexion with the tenders and their
acceptance, or does it apply to correspondence after-
wards and during the execution of the work?—It
applies to all correspondence. For instance, if a con-
tractor thinks that a division officer is, perhaps, a little
hard upon him, and is rejecting timber that is good
enough for the work, then the contractor writes a letter
stating this to the Director of Contracts; the Director
of Contracts sends the letter over to us; we refer the
letter to the General, who sends it back to us with
his report on the contractor’s letter, and then we
send it back with our remarks to the Director of
Contracts, who thereupon communicates with the
contractor.

1064. (*Sir George Clarke.*) Is not that a frightful
system of circumlocution?—I think it is rather circum-
locution. I think it would be simpler if a rule was
made that all communications from contractors were
to go to the Commanding Royal Engineer, and that the
General who is really responsible was to forward
them to the War Office with his remarks. That would
stop about four communications.

1065. (*Chairman.*) When you say forward them to the
War Office, to whom do you mean at the War Office?
They are dealt with first in the branch of the Inspector-
General of Fortifications.

1066. (*Mr. Mather.*) Do you consider that all the com-
munications that you have with the Director of
Contracts are a work of supererogation?—We get on
most amicably in every way, but I do think it causes
delay.

1067. I do not mean that you are not perfectly good
friends, but is his position altogether, so far as you
are concerned in your work, absolutely necessary; is it
your opinion that your work could be done with the
same staff that you have now, at no greater expense to
the Service if the Director of Contracts did not exist?
—Well, for the last week I have been trying to find
some good reason for his existence, so far as works
are concerned, because I want to see the other side of
the question, and I am rather in a difficulty, because
we do the whole of the technical work now.

1068. But would there not be some item of expen-
diture in your department increased?—I do not
think so.

1069. In the first place, you would have to commu-
nicate with the contractor?—No. I think that should
be done in the district, by the Commanding Royal
Engineer.

1070. That comes to the same thing; would he not
require more service than he has now, more clerks?—
It would mean writing one more letter.

1071. May I take it from you that no addition would
be required to the General Officer’s staff or to the staff
of the Inspector-General of Fortifications, or to your
own staff, if, for instance, to-morrow the Director of
Contracts ceased to exist?—I think not.

1072. (*Sir George Clarke.*) In any case it would be a
matter of one clerk?—Very possibly we might want
one more clerk.

1073. (*Mr. Mather.*) The whole of you?—For my
own branch.

1074. But you cannot speak for the General Officer Commanding the district?—I talked yesterday to the Commanding Royal Engineer in London on the subject, and he said he did not think it would create any trouble with them. But, of course, it is a question upon which it would be advisable to get the opinion of a Commanding Royal Engineer as regards the district. At present, of course, they practically do the whole of the work. They prepare the bills of quantities, they price the bills of quantities, they send everything out to the contractors, the whole of that work is done by the district.

1075. There is one case, I think, that might arise, and I should like to ask your opinion upon it. You said, a little while ago, that in accepting tenders you naturally accepted tenders that gave you the least trouble in carrying them out?—Oh, no, I did not mean that. What I meant was that if a contractor has been constantly troublesome in three or four districts we have a feeling that we would rather have the next man if he did his work in a straightforward way.

1076. True; but would a case of this kind be provided for if you had sole control; assuming a tender to be low in amount but the man to be troublesome?—I would rather meet that by not asking him to tender.

1077. But that is just as broad as it is long. I want to put this case to you: You say that a contractor might tender who was a good contractor, whose work was good, whose work you liked, but that in the execution of the work he was somewhat dilatory, perhaps a little careless; he might take men off occasionally to do work that paid him better, and so on, and gave you trouble?—Not so much trouble in that way; the trouble I was alluding to was more trouble in settling up the contract—a man claiming a great many extras that did not exist.

1078. Would the Service get the benefit of contracts which were somewhat lower than others, providing that you or your department would give extra trouble in looking after that contractor who had put in his prices much lower than the others?—I think not. I think the contractors who give trouble are those whose contracts really cost more in the end. Supposing, for example, that a man is 100% below the next contractor, if he works up his extras, and we have a great many fights over the extras, it may end in our paying him rather more money than the next lowest tender.

1079. That is a case of general experience, no doubt?—It is not the trouble I am pointing at; it is the extra expense that is caused by contractors. We had a case not long ago with a contractor where there was a great deal of discussion. We had some deep foundations to put in which went 40 feet deep in some parts; it was very bad building ground, and we had an immense amount of discussion as regards sheeting; and there is no doubt that he got a large extra sum over and above his contract.

1080. I should like to get an answer in one line if I may: supposing that the Director of Contracts ceased to exist, and you had the power which you think you could exercise just as well, in fact perfectly, for the Service, and therefore it was in the interests of economy, could you secure contracts as advantageous for the Service at the War Office as you do now?—Certainly. There is no office that is more interested in economy than my own. We have a certain amount of money given us by Parliament, and we are doing our best every day to make it go as far as we possibly can. We have more interest in economy, I think, than even the Director of Contracts. And the General Officer Commanding the District has the same interest; he has a certain amount of money given him for certain works in his district, and if he can save on some works he will get more for others. It is a direct interest in economy.

1081. (Sir Charles Welby.) Then you do not admit that in such a case as Mr. Mather put just now, the existence of the Director of Contracts does act as a wholesome check on the natural tendency on your part to smooth your path and deal with pleasant people?—I think not. We are just as anxious for economy as the Director of Contracts; in fact, as I say, we have more interest in it.

1082. (Mr. Mather.) You ought to have?—Yes.

1083. (Sir George Clarke.) When you used the phrase, giving you trouble, you did not mean personal trouble, I take it?—No.

1084. You merely meant that people were unsatisfactory in their business relations?—Exactly. Take, for instance, the case of a man sending bad timber on to the ground; the timber is rejected, and he sends back more timber that is not up to the specification. It sometimes delays our getting our barracks finished for weeks and weeks; and we are being constantly pressed by the Quartermaster-General to get the barracks finished. Unless the contractor is a good man and sends good materials at once to the ground, naturally there is great delay; and even if he is fined afterwards, that does not compensate us for the delay.

1085. But the point is, that by giving you trouble, you mean a person who you do not think is capable of efficiently, economically, and in the best way for the public service carrying out the contract?—I would not say incapable.

1086. Not incapable, but less capable than the person whom you would recommend?—Yes, but that brings in a very large question. At present we work on a limited list of contractors, all of whom are supposed to be competent, and therefore with a limited list I think you are to a certain extent bound to accept the lowest tender; and I am a little doubtful myself whether it would not be better if we went in more for open competition. We do in some cases; and, of course, when you have open competition, you have more power of picking and choosing the man who you consider will do the work in the best way for the public service.

1087. (Mr. Beckett.) I see that General Harrison in his evidence recommends the limited list system?—You can argue it on both sides.

1088. I gather that your opinion is rather in favour of open competition?—There is no doubt that limited competition gives less trouble, because in the case of tenders there is very little question that you accept the lowest. With open competition, if a man comes in at a low rate whom you do not know, it takes time considering whether he is competent to carry out the work.

1089. (Mr. Mather.) It depends very much upon the class of work you contract for; in some cases it is very much better to have limited competition with the best firms, and in other cases it is better to go to the open market?—Just so.

1090. (Mr. Gibb.) Have you had experience of cases of open competition?—Yes, we have had experience of it.

1091. (Mr. Beckett.) In the case you referred to just now, was it on a limited list or an open list, where the contract was for 13,000l.?—It was on a limited list.

1092. So that sometimes, even in limited competition, you cannot rely upon the lowest tender?—No; if a contractor has made out the bill of quantities incorrectly his tender may go above that of the next man.

1093. (Sir George Clarke.) As a matter of fact I may take it, probably, as an invariable rule that the tender you select is accepted?—Almost invariably, because as a rule it is the lowest.

1094. It would be a most rare thing for the Director of Contracts to reject it?—Yes.

1095. (Sir Charles Welby.) I have not got it quite clear to what extent contracts up to 2,000l. made by the general officer commanding, are subject to review and criticism at headquarters either by you or by the Director of Contracts?—Not at all, if he has the money.

1096. He has an absolutely free hand in the choice of a contractor?—Oh no; at present he must go to the contractors on the list. The present arrangement is that for each station there is a list of contractors for each class of work. I think there is a list of contractors up to 5,000l., another list up to 20,000l., and another list above that amount. That list is prepared jointly by the Director of Contracts, the General Officer Commanding, and the Inspector-General of Fortifications, and then the General Officer Commanding in calling for tenders is bound to go to every name on that list.

1097. (Mr. Gibb.) He must call for tenders?—When he calls for tenders.

1098. Is he obliged to call for tenders?—Yes.

Col. C. M.

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

1099. (*Sir Charles Welby.*) And he must go to every name on the list?—Yes. It is one of the grievances with General Officers that they must go to every name on the list.

1100. And how often is the list revised?—I could not say; I think it is annually.

1101. Is your experience of contracts obtained by General Officers Commanding as a rule satisfactory?—We have not had sufficient experience yet. In my branch we have only had two instances, I think. It is only since the Decentralisation Committee sat.

1102. (*Colonel Miles.*) Must the Generals accept the lowest tender?—I do not think that point has been discussed. They have always accepted the lowest tender, and if they did not accept it, they would have to give reasons for not doing so.

1103. (*Sir Charles Welby.*) What would the machinery be if it were in full working practice? Assuming that the General Officer discovers in the course of the execution of a contract that the contractor is unsatisfactory, what is the machinery for securing that that same man should not continue on the list?—He writes to ask to have his name taken off the list, and in some cases he does not give him a tender form. There is a case in point, which I daresay Colonel Hildebrand could mention. It was rather a curious case. There was a contractor that the General did not like at all. He was on the list, and when the tenders were sent out he omitted this man's name; but when it came up to the War Office, the Director of Contracts saw that his name was omitted from the list, and got a tender from him without consulting the General, and that tender was the lowest. So that, in that case, actually a man was accepted who the General had recommended should not be asked to tender.

1104. (*Mr. Mather.*) I suppose you find many objections amongst contractors to having their names put on the Army list?—No, they are most anxious; they like to have their names on the list, even if they never get a contract. It is rather hard to understand, but we find that there are many contractors who tender over and over again at such prices that they have no chance whatever of getting a contract.

1105. (*Mr. Gibb.*) I think Mr. Mather was suggesting that they like it better if they do not get a contract?—They like having their names on the list, but, as a matter of fact, they tender at such a sum that they do not get the contract.

1106. (*Mr. Beckett.*) Are not their names removed after a time if they do not get contracts?—There has been no machinery for it up to the present time, so far as I know. I think if you look at that paper (*handing in a paper*) you would see that there is not the remotest chance of the higher tenderers getting the contract.

1107. (*Sir Charles Welby.*) Do you think it would be very desirable that the list of contractors supplied to the General should be revised at regular intervals?—Yes.

1108. But that is not systematically the case?—I believe it is systematically the case, but I cannot say positively what the dates are. Our view is that the list is rather too large.

1109. (*Chairman.*) I think Sir Charles means both with a view to taking off contractors who are not satisfactory, and with a view to removing contractors who put in so as to get on the list, but who tender at such a price as to secure their not obtaining a contract?—We are always glad to get fresh names. If any contractor can prove that he can do work, and shows what good work he has done, and has a good banker's reference, he goes on the list without question.

1110. (*Mr. Mather.*) Do you mean that there are new applicants?—Yes, many new men who want to get on the list.

1111. (*Mr. Beckett.*) I should like to be clear on one point that was raised in General Harrison's evidence. He says that in some cases the work is performed by military agency, and in others by contract work. Do you think that the work should always be performed by contract where it is possible?—I prefer it. All our barrack loan work at home is done by contract. We have had no military work at all. Abroad, of course, it is necessary. At Gibraltar we do a great deal of work by sappers, but there it is almost im-

possible to get civil labour; we have no contractors there.

1112. In fact you would rather avoid military work, if possible, and give it to contractors?—I think if it is a large work a contractor does it better and cheaper.

1113. In answer to Mr. Mather you said that you wished the Director of Contracts to be eliminated; that means that his staff would be eliminated too, I suppose?—I did not say that I wished the Director of Contracts to be eliminated. I only said that I thought we could get on rather quicker if we did the work ourselves.

1114. (*Sir Charles Welby.*) You said you had tried for a week to see what good he was?—Yes; but our work is, of course, only a small part of the Director of Contracts' work, and I only speak as regards our own work.

1115. (*Mr. Gibb.*) I want to ask you about the mode of dealing with tenders, just to test the amount of circumlocution that exists. As I understand, the Director of Contracts sends to you a list of the tenders when he receives them?—Yes.

1116. Then, taking the statement that you have handed in, I see the first minute upon it is a reference by the Director of Contracts to the Inspector-General of Fortifications?—Yes.

1117. The next is a note "C.S. for your observations"?—That is to enable the Chief Surveyor, who makes the professional examination of the bills of quantities, to make any observations.

1118. The next reference, then, is by the Inspector-General of Fortifications to the Chief Surveyor?—Yes.

1119. (*Chairman.*) That is all in the department?—Yes.

1120. (*Mr. Gibb.*) Then the next is a note addressed to the Director of Army Contracts, signed by yourself?—Yes.

1121. Saying that the bills of quantities are practically correct?—Yes. That is the simplest possible case.

1122. I just want to follow them one by one. Then the next note is "accept Everett," with a signature?—That is the Director of Contracts. That is his signature.

1123. Then, after you have dealt with it, it does not go back to the Inspector-General of Fortifications?—Yes, it comes back to us again; it is marked back to us on the outside of the paper after he has accepted it; there is no minute of that. Perhaps I had better explain it to you. You see here there is no minute on the paper.

1124. But I just want to trace what is practically done in the office and out of the office with it. You make a note addressed "D. A. C."?—Yes, Director of Army Contracts.

1125. When you have made that note on it, do you send it to the Inspector-General of Fortifications, or do you send it direct to the Director of Contracts?—Direct to the Director of Contracts.

1126. But then I see below your signature there is another signature, after "accept Everett"?—That is signed by the Director of Contracts.

1127. That is after you have returned it to him?—Yes.

1128. And in returning it to him do you send a minute concurring in the acceptance of the contractor proposed?—That is, concurring that the bills of quantities are correct.

1129. Then, after the Director of Contracts decides upon the contractor to be accepted, I see there is a minute in which he reports?—It comes back to us. You see here, though it is not shown on the paper, that we mark it to the Director of Contracts and he marks it, outside, back to us.

1130. Then after accepting it, he sends it back to you?—Yes.

1131. For what purpose?—In order to tell the General and to give him the money.

1132. For you to inform the General of the acceptance of the tender?—Yes, and to give him the money. That is an important part.

1133. Then, who communicates to the contractor the acceptance of the tender?—It is done at that stage.

1134. By whom?—By the Director of Contracts,

1135. And who arranges with the contractor for the signature of the contract and the various legal formalities that have to be gone through?—He informs the contractor that his tender is accepted.

1136. Who?—The Director of Contracts.

1137. Now, after a contract for works is made, on whom does the duty of seeing to the execution of the contract rest?—On the Commanding Royal Engineer under the General Officer Commanding.

1138. Does it, to any extent, rest with the Director of Contracts?—None, whatever; he has nothing to say to it once the contract is signed.

1139. But you told us that correspondence in regard to the execution of contracts passes through the Director of Contracts?—The bulk of the correspondence goes from the contractor direct to the Commanding Royal Engineer, but if the contractor thinks the Commanding Royal Engineer is too hard upon him, he may write a letter direct to the Director of Army Contracts complaining; then that letter is sent from the Director of Army Contracts to the Inspector-General of Fortifications, who sends it down to the station, gets a report as to whether the contractor's report is correct or whether he has any grounds for it, and then it comes back, through the same channel, to the Director of Army Contracts who answers the contractor.

1140. But that seems an unimportant correspondence if it is simply a letter of a contractor to the Director of Contracts on a matter that the General Officer Commanding has power to decide. The Director of Contracts, instead of referring it to the General, might put it in the waste-paper basket if he did not think much of it?—Yes.

1141. I understood you further to say that all correspondence with contractors passed through the Director of Contracts?—All correspondence that comes to the War Office from the Contractors; but the bulk of the correspondence with the contractors goes to the Commanding Royal Engineer in the district. I said that all the War Office correspondence comes to the Director of Army Contracts.

1142. You mean that the contractor would not write to the Inspector-General of Fortifications?—No, never; he writes to the Under-Secretary of State for War.

1143. But he would write to the General Officer Commanding?—He would write to the Commanding Royal Engineer in the district.

1144. Then do you think that the contractor should be prevented from writing to the Director of Contracts? I think it would be better, and save time, if all communications from the contractor were to go to the Commanding Royal Engineer.

1145. But, as I understand you now, it does at present go to him?—Except that the contractor, in addition to that, occasionally writes to the Director of Army Contracts.

1146. (Chairman.) That is when he cannot arrange with the Commanding Royal Engineer?—No; I believe sometimes when he has not tried to arrange.

1147. (Mr. Gibb.) In that case, would not the Director of Contracts simply pass on the letter to be dealt with by the General?—That is so. It only takes up time in the office; that was all I was thinking of; that it would save a great deal of time if a rule was made, that all letters from contractors were to go direct to the Commanding Royal Engineers. Then, if it had to be referred to London, it would come up straight to London with their remarks in place of going the round to ask for their remarks.

1148. Practically, I understand you to say that the execution of contracts and the duty in regard to seeing them executed does pass from the Director of Contracts to the Works Branch immediately on making the contract?—Absolutely.

1149. No responsibility in regard to execution is left upon the Director of Contracts?—None whatever, either for execution or for finance.

1150. Does that apply to contracts for stores for your department as well as contracts for buildings?—Yes; all contracts; the whole responsibility rests with us.

1151. Then in regard to requisitioning stores, which have to be purchased; do you fix the dates for delivery under contract?—Yes.

1152. In all cases?—Yes, in all cases so far as I know. We make everything complete before it goes to the contractor.

1153. And do you consider yourself and your department entirely responsible after the date of the making of the contract for seeing that store contracts are executed according to their terms?—Entirely.

1154. Now, as regards works under and over 2,000*l.*, are those works, after the contract is made, dealt with in exactly the same way?—Exactly in the same way; the only difference is that the General accepts in one case, and the Director of Army Contracts accepts in the other. In every other way they are identical.

1155. As regards taking out the bills of quantities, who prepares the bills of quantities for works under 2,000*l.*?—Under 2,000*l.*, they are always prepared by the surveyor attached to the Commanding Royal Engineer in the district; that is, the permanent surveyor.

1156. He being a competent Quantity Surveyor?—Yes, they are all trained surveyors.

1157. Then, as regards the contracts over 2,000*l.*, who prepares the bills of quantities?—There are two systems. Take an ordinary contract in a district, say, for 30,000*l.* One system is that the surveyor belonging to the Commanding Royal Engineer and a surveyor who is appointed by the contractors, who are being asked to tender, can jointly prepare the bills of quantities. The other system is that the War Office surveyor prepares them altogether, and then the War Office is entirely responsible for the bills of quantities; in some cases we save considerably by that system.

1158. The second or the first system?—The second system. For instance, at present we are building infantry barracks at the Curragh and Colchester and Pembroke and near London, and we are about to commence at Salisbury Plain. All those barracks will be built on identically the same plans and the same bills of quantities; therefore, if they had been taken out in the districts the plans and bills of quantities would have had to be made five times. In that case we thought we would save money by making the plans and bills of quantities in the War Office, and therefore, of course, they would be prepared by the War Office surveyor.

1159. Which system is the one most generally adopted?—Usually the joint system up to the present time.

1160. Do you find as regards quantities prepared in the districts, that there is more delay in completing the quantities after the receipt of the plans than in the case of quantities prepared at the War Office, or less?—I think about the same.

1161. Do you find that the quantities are taken out with proper expedition?—Yes, they are taken out very fairly quickly. We have one difficulty, that is, that when they are taken in the district and there is a contractor's quantity surveyor employed, it is sometimes very hard to get hold of him. The number of quantity surveyors in the country is comparatively limited.

1162. Now one question about stores supplied for the execution of contracts in districts, who settles from what depôt these stores are supplied?—They are not supplied from any depôt, they are purchased for the contract.

1163. Perhaps I did not put my question aright. What I want to know is, whether all stores for contracts are sent from Woolwich?—Oh, no, hardly any for our contracts.

1164. Then there is a distinction, is there, between the works branch and the supply branches?—Yes, they are quite distinct. Our contracts, as a rule, if there are stores which are not included within the contractors' bills of quantities, are purchased from the special contractors with whom we have running contracts.

1165. Now, as regards triennial contracts; as I understand, the triennial contracts are made by the Director of Contracts for small works and repairs in the districts?—Yes.

1166. Do you think that that system works satisfactorily?—I hardly like to speak about it, because it does not come into my own branch at all. The triennial contracts are dealt with altogether by the Deputy Inspector-General, who deals with barracks that are paid for on the annual estimates, Colonel Bagot; therefore I have not sufficient experience to be able to speak as to that.

1167. You said you thought that there should be no money limit to the stores that the general officer

Col. C. M.

16 Jan. 1901.

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

commanding should be able to purchase?—No, I should fix the limit at 2,000*l*.

1168. You would not go beyond 2,000*l*.?—No, I would not give him power beyond.

1169. Then up to 2,000*l*., would you give the General Officer Commanding discretion to purchase locally?—By tender.

1170. Although there was a running contract?—Oh, no; if there is a running contract he should purchase under the running contract.

1171. Then you would limit his purchase?—To exceptional cases.

1172. To stores not already provided for in the running contract?—Certainly.

1173. Now, as regards buildings; is there not rather a distinction in the absence of a running contract in the case of buildings. You have got nothing in the case of buildings to correspond with the running contract for stores?—Except the contract with the triennial contractors. The General must give the triennial contractors any contract up to 400*l*., and that is executed under the triennial schedule; so that, within a limit of 400*l*., we have practically a running contract for buildings.

1174. Of course, the triennial contract would not be applied to a new building?—It might if it was under 400*l*.; he is at liberty to do that. Supposing that he had to build, say, a small cook-house, or something of that sort, or put up a temporary stable, although it might be new, yet if it was under 400*l*. he would do it under the triennial contract.

1175. Under the schedule of prices?—Yes.

1176. You suggest that all tenders should be dealt with in the Works Department and not by the Director of Contracts. I want to know whether you have considered this point, that if that system were adopted, there would be no independent officer who would see any part of the work of the works branch?—I think if it was an important contract it ought to go to the Secretary of State. I think the Admiralty principle is the best.

1177. Would you suggest that the Secretary of State should go through the contracts?—No, I would propose that we should have the same system that obtains at the Admiralty and the Office of Works. I think we are the only office where there is a non-technical branch dealing with contracts for works. Take, for instance, the Director of Works at the Admiralty; he gets all his own tenders, and then, in the case of large tenders, he submits them to the Lord of the Admiralty under whom he is acting, and I believe the Chief Engineer for Naval Loan Works does the same thing.

1178. But is there not at the Admiralty an officer corresponding to the Director of Contracts?—Yes, but he has nothing to say to works, I understand. Then the Office of Works is in the same position.

1179. You see under your system the same department would propose works, prepare plans, prepare quantities, communicate with contractors, accept the tenders, and execute the works?—No. I think that is not what I would propose. What I would propose is that the Generals in the districts should, as at present, call for tenders, that they should receive tenders in the districts under the same rules as are used for accepting stores such as provisions and forage, that up to 2,000*l*. the General should have power to accept, and that above 2,000*l*. the General should send to the Inspector-General of Fortifications a schedule of tenders stating which he proposes to accept.

1180. That is all in the same department, in the works branch?—I think it is so in the Office of Works and in the Admiralty; I think we are the only department that have a separate branch so far as I know.

1181. (Colonel Miles.) Not in the same department?—No. The General Officer Commanding can hardly be said to be in the same department.

1182. (Mr. Gibb.) I see. The General, being a military officer, cannot be said to be in the Department of the Inspector-General of Fortifications?—No.

1183. (Sir Charles Welby.) But the Commanding Royal Engineer serves two masters, does he not?—No, he serves the General.

1184. Does he not also serve the Inspector-General of Fortifications?—No, I think he is entirely under the General.

1185. (Colonel Miles.) Entirely, in theory; as to his proper position, he is entirely under the General?—Absolutely. He is in the same position to the General as the Inspector-General of Fortifications is to the Secretary of State for War.

1186. (Mr. Gibb.) Then do you suggest that the supervision of the General Officer Commanding would be an independent check on works contracts superior to that of the Director of Contracts?—No, because the general officer should send the tenders up to the War Office.

1187. But, clearly, when they reach the War Office the Director of Contracts would be an independent check?—In 99 cases out of 100 the General will have made a right proposal, and he will simply be told that his proposal is approved; but the advantage of sending to the War Office is this: Supposing we knew that the contractor whom the General recommended for acceptance was nearly bankrupt in another district, the General might have no information on that subject, and we should know that he would not be a good man to give the contract to.

1188. But at present, for whatever it is worth, you have the necessary concurrence of two entirely separate departments in letting works, namely, the Works Department and the Contract Department?—Yes.

1189. Under your proposal the whole of the matter would be placed under one department?—No, because the General is quite independent. The General is not under the Inspector-General of Fortifications. He is under the Secretary of State for War.

1190. The supervision of the General exists now as regards works under 2,000*l*.?—His supervision exists as regards all execution of works in the district; he is the officer who is held responsible.

1191. So that at present you have the Works Department with the General, plus the Contract Department under the Director of Contracts?—Yes.

1192. You would eliminate entirely the Contract Department?—Yes.

1193. And leave the Secretary of State dependent, for the independent financial examination of works contracts, on whom?—On the Inspector-General of Fortifications.

1194. And the General?—And the General, of course.

1195. (Sir Charles Welby.) Did I rightly understand you to say that under your proposals all contracts would originate with the general officers commanding—all contracts for building works of whatever size?—You may say that they do now, in one sense. What happens is this: if we take our own loan works; supposing, for instance, that there is 100,000*l*. allotted for new building at Aldershot, what we do first of all, is to write to the General and ask him to suggest which are the most important works in his district which should be gone on with. In the case of Aldershot (it is well to take a special case), when we wrote to the General he sent us up a list of really necessary works that amounted to 400,000*l*. Then, in the Loan Bill of 1899, the Secretary of State said that only 100,000*l*. was to be allotted in that loan. As soon as the 100,000*l*. had been voted by Parliament we wrote again to the General and asked him which of his services, which amounted to 400,000*l*., he considered the most essential to be gone on with. He submitted a list of services up to the extent of 100,000*l*. which was very carefully considered by the Inspector-General of Fortifications and the Quartermaster-General and was finally settled. That being so the General has no power to propose any other service except those that are included in the list.

1196. That I quite understand is the usual procedure, but may I just put the case that I had in my mind. Is it not the fact, that during this year, you have from headquarters here put out a large order for huts; a special order for huts for additional troops?—I think it would be better, if you would not mind, asking Colonel Bagot about this; the work is on the Estimates.

1197. But my point is that in that case the general officer commanding did not come in at all. They were ordered entirely from headquarters, and in that case, Mr. Gibb's argument comes in, that the whole business under the system that you advocate, would take place purely in the Works Department without any outside action of General or anybody else at all?—Yes; but that is a case such as I have never had at all. He should then call for tenders for those huts, I think.

1198. Perhaps he should have done so, but, as a matter of fact, the whole thing was not done so?—Theoretically he should have done so. But it was an exceptional case, due to stress of war, that is not likely to arise again.

1199. (*Mr. Gibb.*) Still, I understood you to say that the mere business of obtaining and accepting the tenders in the contract office does not cause any great delay?—No.

1200. (*Mr. Beckett.*) In the Committee on War Office Establishments, I see it is stated that contract works up to 2,000*l.* are to be made in districts as an experiment, and if the experiment succeeds, the limit of 2,000*l.* will be considerably increased. Do you consider that that experiment has succeeded?—It has not been tried yet; practically, none of the contracts up to 2,000*l.* have yet been finished. The experiment will not be settled for another year or so.

1201. (*Sir George Clarke.*) Mr. Gibb rather suggested to you in his questions, that if the Director of Contracts' Branch was eliminated a sort of valuable check in the interest of the public service would be taken away. I want to ask you, what knowledge and what experience the Director of Contracts brings to bear upon your work. Does he understand anything about the nature of buildings; does he inform himself as to the capacity of contractors, or is there anything he does that you can say is a *bonâ fide* independent check brought with knowledge to bear upon you?—Of course he has no technical knowledge whatever; for all technical information he always comes to us; and as regards the capacity of contractors, of course, as I said in a previous answer, he depends upon the information we give him from the completion reports on the contracts, but he makes inquiries as to the financial position of contractors.

1202. There is a complete financial check other than that of the Director of Contracts on all your expenditure?—Yes.

1203. Quite apart and distinct?—Yes; he does not check expenditure at all.

1204. Not the least. I ask you to put it perfectly distinctly; he does not check expenditure in any way?—Oh no. When he gets in the tenders he never inquires whether there is money to pay for the contract or not; that does not come within his branch.

1205. There are one or two other points that I should like to ask you about. You said that the General Officer Commanding can always order 2,000*l.* worth on the buildings, but can not do it on bricks. What is a building; is it a fence?—A fence is not a building.

1206. Therefore he could order a sergeants' mess for 2,000*l.* and could not order a fence above 50*l.*?—No, if he had made a sergeants' mess, and wanted to put a fence round it, he would have to send it up to the War Office for authority to buy the fence.

1207. At foreign stations the Director of Contracts does not exercise any control or review?—He exercises no control whatever. The General Officer accepts the contracts, but after the General has accepted the contracts he sends the schedule of the tenders with the one marked that he has accepted; and, supposing he had accepted, say, the highest tender, and given no explanation, of course he would be asked why he had done so.

1208. Of course it would be absurd to suppose that the General can be less trusted at Portsmouth than at Malta?—I never could understand it.

1209. So that it is entirely a question of time and postal communication?—I should think so.

1210. Four days in the one case and one in the other. Although the General Officer Commanding can make a contract for 2,000*l.* as you have explained, is it a fact that the Inspector-General of Fortifications, the head of a great branch of the War Office, can make contracts for stores for only 50*l.*?—Only 50*l.*, except in the case of iron stores, for which he has authority up to 100*l.* I think he mentioned that in his evidence before the War Office Contracts Committee.

1211. Then your view is, I take it, that the dealings with the contractor during the execution of his contracts should be with the General Officer Commanding, leaving, of course, to the contractor the right of appeal in case of disagreement to the Secretary of State, or

the Financial Secretary?—I think it would save a great deal of trouble.

1212. I suppose, in the course of contracts, you sometimes have to resort to arbitration; I think you said so?—Occasionally.

1213. In case of arbitration, the Director of Contracts would make all the arrangements, of course?—No, the Director of Contracts applies to us to name the arbitrator, and we, of course, do our best to get a good man. For instance, we have an arbitration down at Plymouth now, and I thought the best person to apply to in the special case was the President of the Institute of Surveyors. He took a great deal of trouble over it, and named a very good man, who is reporting now on it; and I, having got his name, sent it to the Director of Contracts to know if he agreed, and to the Finance Branch for authority to give him the necessary fee; but the finding of the arbitrator is supposed to rest with the Inspector-General of Fortifications.

1214. Then the Director of Contracts does not perform a duty which it would seem might naturally be performed by a civil official possessing no technical knowledge?—Apparently it has not been the custom for him to do so.

1215. Does the Director of Contracts often add names to your proposed list of contractors?—Sometimes.

1216. Has he any means, except what you supply him with, of arriving at any conclusions as to the respectability and capacity of contractors?—I do not think so; I do not quite know what other means he could have. Of course he gets our reports. He also inquires as to the financial capacity of contractors.

1217. Does it not come to this, that the Director of Contracts' work, as regards your branch, is purely clerical from beginning to end?—Yes, quite, not technical at all.

1218. It is purely clerical?—It is non-technical.

1219. Except, of course, that contractors, I suppose, occasionally interview him?—Yes, I believe so. I think it is rather to be regretted, because I think it is better for contractors to deal by letter so far as possible; it makes the thing more clear.

1220. Then may not this purely formal intervention of the Director of Contracts with your operations be said to interfere with the responsibility of the Inspector-General of Fortifications in regard to works?—It does, because it makes two people to a certain extent, responsible; to a certain extent it does away with the individual responsibility of the Inspector-General of Fortifications.

1221. (*Mr. Mather.*) How does any responsibility attach to the Director of Contracts?—He accepts the contract.

1222. But you say that is only clerical work?—But still he has the responsibility.

1223. What responsibility?—I presume he has the responsibility of keeping the contractor up to his work, and yet he cannot exercise it.

1224. (*Chairman.*) You have told us that it is you who keep him up to it?—Yes; at the same time the Director of Contracts is supposed to have some responsibility, but I have never been able to understand where that responsibility came in.

1225. (*Mr. Gibb.*) Supposed by whom?—It is only theory.

1226. You say he has no responsibility?—I do not quite know what his responsibility is, but the fact remains that there are two branches mixed up in the contract question.

1227. (*Mr. Mather.*) But do you now withdraw that expression that he is responsible as well as yourself?—He accepts the contract, therefore he must have some responsibility.

1228. Not if he acts as a clerk.

1229. (*Mr. Gibb.*) His responsibility may end on the acceptance?—No, he must have responsibility because he can override us as to the list of contractors.

1230. (*Chairman.*) But you told us that he agrees?—Yes.

1231. But if there is any difference of opinion he settles it in consultation with you, or there is an appeal to the Financial Secretary?—Yes, but there have been cases where there has been a difference of opinion.

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

Col. C. M.
Watson,
C.M.G.

16 Jan. 1901.

1232. Then he has been to the Financial Secretary as representing the Secretary of State?—Then the decision has been given to the Director of Army Contracts against us; and in that case that I mentioned, in the fortification, the General Officer Commanding was asked to carry out a contract given to a man of whom he disapproved.

1233. Then the responsibility would be on the Financial Secretary?—You might put it in that way; it does not rest in our department.

1234. (*Sir George Clarke.*) Does the Director of Army Contracts' Department afford you any help in any way in carrying out your duties?—No, I do not think so. I do not know on what point he helps us.

1235. Then, practically, is it not the case as we have been told, that the Director of Contracts' functions are those of a post office?—To a certain extent, yes.

1236. And it is a post office that causes delay and that multiplies correspondence, does it not?—It multiplies the number of minutes on the papers.

1237. You have told us that the Inspector-General of Fortifications, and you, as his representative, and the General Officers Commanding, have the strongest and most direct motives for securing economy in your work?—Most certainly.

1238. What is the number of your staff employed in dealing with questions of Barrack Loans?—I brought a list, as I thought I might be asked that question. In what I call the administrative staff of the Barrack Loans we have three officers and 11 clerks; perhaps I should say 12 clerks, because I am taking steps to get another.

1239. What annual expenditure do you deal with?—It comes to about 600,000*l.* a year roughly. In some years it is a little more, some years a little less. After the Barrack Loan began in 1890 it gradually went up from 173,000*l.* to 673,000*l.* Then the barrack loan, as it worked out, began to decline. Then we got the Military Works Loan, and in the last year, 1899-1900, our total authorisations were 743,000*l.*, including both loans.

1240. You employ temporary clerks, do you not?—All our clerks are temporary clerks, except the head clerk.

1241. Therefore you have the power of instant dismissal of any of them?—Yes.

1242. And you consider that a better arrangement than bringing in establishment clerks?—I find it works very well. The loan is supposed to be a temporary work, and so we were allowed to take on temporary clerks, and I find that they work very satisfactorily; and the fact that we can dismiss them at very short notice, of course, naturally helps to make them work well.

1243. (*Colonel Miles.*) You have never been Commanding Royal Engineer of a district, have you?—No, only division officer.

1244. You have served as division officer?—Yes.

1245. You know when contracts come in, both in the Quartermaster-General's branch and your branch, they are not dealt with solely by either branch, but taken to the General?—They are dealt with by a committee under clause 15 in the regulations for supply and barrack services.

1246. When the tenders are opened?—Yes.

1247. Then eventually they are taken up and signed by the General?—Absolutely. The Commanding Royal Engineer has no responsibility.

1248. And they therefore come to you as properly signed by the General?—It must be signed by the General.

The witness withdrew.

Colonel GODFREY HILDEBRAND examined.

1264. (*Sir George Clarke.*) You are Deputy Inspector-General of Fortifications in charge of the Fortification Branch?—Yes.

1265. How long have you occupied that post?—Since 1897, and as assistant in the same Branch since 1894.

1266. I believe there are one or two points of difference in your methods of dealing with works at

1249. In some cases not only are contracts dealt with by the Royal Engineer Branch, but they are referred to other branches of the staff; or it may be so?—Necessarily, I should say, in some cases.

1250. It is in no way correct to say that they would be kept in one branch as regards the district?—It would be against the regulations.

1251. (*Sir George Clarke.*) There is just one more question that I should like to ask. Do you consider that the Director of Contracts, or his functions and actions, relieve anyone else of the idea of any responsibility in any sense?—No, I think the responsibility of the Inspector-General of Fortifications remains the same.

1252. (*Colonel Miles.*) In the Royal Engineer Branch they limit the amount to which the General may accept a contract to 2,000*l.*?—Yes.

1253. Are you aware that in the Quartermaster-General's Branch the General accepts directly much larger contracts?—I am not aware of that.

1254. For meat, for instance, and forage?—Is there a limit?

1255. No, there is no limit. Then, on one other point: There has been sometimes in cases where reconstruction has been going on, considerable pressure brought by the Quartermaster-General's Branch on your branch to hurry up the buildings?—Great pressure.

1256. Do you not consider that anything in the nature of extra delay (and I think you said sometimes it might take a fortnight passing round the contract until it is finally accepted) is a substantial disadvantage?—I regard it as a very grave disadvantage; we sometimes lose some weeks of the best building weather.

1257. (*Sir Charles Welby.*) In reference to your statement just now in answer to Sir George Clarke, that the functions of the Director of Contracts are purely clerical and formal, surely you would admit that, for good or for evil, he does exercise an independent check on the choice of contractors, and thereby is an extra safeguard, whether necessary or not, against undue preference being given to any particular contractor?—Certainly; but I think that the Inspector-General has the greatest interest in getting a good contractor. There would be more chance, I think, of the Director of Army Contracts wanting to put a contractor upon us who did not carry out the works so well, than of the converse.

1258. But to that extent you are prepared to modify your statement that his functions are purely clerical and formal?—I was trying to explain that I thought he had some responsibility.

1259. (*Mr. Mather.*) But this is a very important point. What is the nature of the check that you admit in the department of the Director of Contracts?—The nature of the check is that he has to agree in the list of contractors.

1260. (*Chairman.*) Might we not put it that he exercises a steady pressure in the direction of the lowest tender?—No, because we are the most anxious to accept the lowest tender. No one is so anxious to get the work done cheap as we are. There is no question about it.

1261. (*Mr. Gibb.*) But his concurrence is necessary to the acceptance of any tender?—Yes.

1262. (*Mr. Mather.*) You seem to indicate that he is a check in the sense of a barrier and not a help?—I am really half at a loss to know in what sense he is a check. I conceive he is some check.

1263. (*Sir George Clarke.*) Can any check be exercised by any individual or any department without knowledge?—I should have thought not.

stations from those of the barrack side; could you say what your method of contracts for works and fortifications is?—A very usual contract is a measurement contract. The contractors are invited to tender at a percentage above or below a certain schedule of rates. We are never sufficiently in a position to be able to make detailed bills of Quantities for irregular fortification works beforehand, so that we can never go in for lump sum contracts.

Col. G.
Hildebrand.

Col. G.
Hildebrand.
16 Jan. 1901.

1267. Then the contract is made on items of measurement?—Yes.

1268. Movements of earth of particular kinds, for instance?—Yes. There is also another difference in that our drawings are secret ones, and they are never handed over to the contractors at all; they are kept on the works under our own control, the contractor can see these drawings as required, and is allowed to make working drawings which he may require for carrying on his work from time to time, but he is not allowed to take any drawings away off of the works.

1269. And as regards the amount of contracts you can put out, can the general officers of districts put out contracts up to 2,000*l.* without the intervention of the Director of Contracts?—Yes, that rule applies to any contract; it applies to all contracts, but our contracts are almost invariably above that sum for these Fortification Works.

1270. Then practically all your contracts go to the Director of Contracts for confirmation and approval?—He gets them all in the first instance.

1271. And he approves them?—He approves the selected tenders.

1272. Do you send up the names of firms for tendering?—In old days, when we wished to put a Fortification work to tender, we invited the General to send us a certain limited list of names of firms which he recommended; we used to consider this and suggest any additions which we thought desirable, people that were not in that district but doing similar work and were well reported on in others. Then we passed it to the Director of Contracts for him to concur; he might add one or two; eventually it came back through us and we informed the General what firms were agreed to, and then he put out the contract to tender.

1273. I suppose the Director of Contracts would not add firms now without asking your opinion upon them?—Oh dear, yes, we rarely know anything about it till after it is done, as he now sends the instruction direct to the General.

1274. Then is your opinion not asked upon tenders before the particular tender is accepted?—Yes, the tenders are delivered to the Director of Contracts.

1275. And then sent over to you?—They are sent over for professional examination. They must come to us because the selected tender which he suggests, which is practically the lowest tender, is sent over to us for any remarks upon it—whether we propose to agree or not.

1276. Of course, it is your particular wish to execute the works in the most economical way?—It is, of course, subject to its being within the time we require, and being good work.

1277. Time, of course, is a considerable element in regard to fortifications?—In some cases an immense element, because we may have guns waiting to be mounted and we must get the works ready for them.

1278. Have you ever been over-ridden in your proposal for the allocation of contracts by the Director of Contracts?—Do you mean to say in the List?

1279. Your proposal for a particular tender to be accepted?—In some cases a firm has been put into the List at the last moment, without our knowing it and without our agreeing to it; and with the General and everybody locally objecting; this firm has been the lowest tenderer. When we have found it out we have expostulated and said, "We disagree entirely with this man being employed; the General and everybody else object to him." But we have been over-ridden.

1280. (*Chairman.*) He would be a man on the List?—We do not know what the List for fortifications is; we do not keep the List; the Director of Contracts makes the List.

1281. (*Sir George Clarke.*) Have there been cases in which bad or slow work has been done owing to the employment of contractors to whom you objected?—Yes. We have not only had slow work, but we have had instances in two particular districts, in the last two years, where we have been endeavouring to stop a certain contractor from being invited to tender because the Generals had given very strong reasons, for objecting to him, and we knew ourselves from our own observation and from the papers that he had more work than he had power to do, or that he had his only reliable superintendents employed on other works.

1282. Is it not the case that it might be rather serious in the interest of the nation that works of fortification should be delayed or badly executed by people to whom you object?—Most distinctly so, it might lead even to serious loss of life. If any bad work is put in in connexion, for instance, with the mounting of guns, it might lead to loss of life and enormous loss of money in connexion with the gun mountings which might be destroyed.

1283. May I take it that you are not satisfied with the working of the present system?—I am absolutely dissatisfied.

1284. Do you agree with Colonel Watson in thinking that the elimination of the Director of Contracts' intervention in works contracts in your branch would be a benefit to the Service, that is to say, if you had just as free a hand as is given to the Director of Works at the Admiralty?—I do not know exactly what that is, but so far as the interest of the work is concerned, the intervention of the Director of Contracts is entirely for the bad, in my opinion. He practically is a sort of advocate for bad contractors; that is our experience. He is in the position of an advocate with *ex parte* evidence which he can take at any time, and anyhow, we know nothing whatever about it, the cases may be settled and decided upon evidence and things that are not within our knowledge.

1285. Do you complain, as Colonel Watson does, of the great amount of superfluous correspondence arising with the Contract Department?—The whole of it, in my opinion, could be done away with, if the contract arrangements are kept in the branch which is to carry out the work.

1286. And there is a great deal of that correspondence?—Immense.

1287. Which requires a great deal of your personal time?—Yes. I should mention that, in addition to fortification services the contracts for all special iron work go through me. In the case also of the letting of a certain amount of land, if it is over 100*l.*, although the General may be acting on the advice of his professional land agent and makes his recommendations to us (and we are supplied with a very excellent and highly qualified land agent also), before anything can be done, I have to refer it to the Director of Contracts for his concurrence. If there is a letting, which has been accepted, of a very small amount, should we at any time require to take an acre away, or even half or a quarter of an acre, and alter the letting, I am obliged to refer the question to the Director of Contracts to concur in the amount to be reduced from the lessee. That alone causes no end of useless correspondence. I cannot recall an instance of his having made any remark upon these cases. He generally concurs in all respects, I quite agree, but it is most unnecessary correspondence.

1288. Can you suggest any advantage to the public—either from the point of view of efficiency, economy, or speed—that arises out of the present system?—I conclude—of course it is matter of history—that the Director of Contracts is supposed to be established for the purpose of preventing corruption and undue partiality; but I should imagine the more people who are concerned in a contract, the more chance there would be of corruption and of your not finding the person who was guilty. There is just this one thing that he does which we should have to do, and that is to obtain an opinion as to the financial soundness of a firm. He cannot tell us as to professional soundness, because he is not a professional man, and has no one in his office who can advise him.

1289. Does he make inquiries into the professional soundness of contracting firms?—I could not say, but in the case of ironwork and electrical work particularly, he refers the matter to us. We then send down and have the firm's works inspected and their kind of work examined into, and inform the Director of Contracts of the result of the inquiry.

1290. Has there ever seemed to be any tenderness towards special contractors?—Yes, certainly. For the last two years there is one certain firm whom we have every reason to be most dissatisfied with, both as regards bad work and delays in work, and from being a sort of sea lawyer. The firm's main object appears to be to get contracts at low prices, and then work the regulations so as to find the weak points in them and make their money up afterwards. They have been objected to over and over again in the course of the last two

Col. G.
Hildebrand.
16 Jan. 1901.

years by two Generals of districts, one of whom at last took the step of leaving them out of the lists of firms to tender, without the consent of the Director of Contracts.

1291. In that case, I suppose you would officially point out to the Director of Contracts that this man is not, in your opinion, a satisfactory person to give a tender to?—Yes. The present rule, under which Fortification tenders are called for, was established recently by the Director of Contracts. It was introduced without reference to us. I knew nothing about it. This arrangement is that certain lists of contractors for barrack work which have been approved, have now been made applicable to special fortification works. An instruction was issued by the Director of Contracts directly to the General, and not through us, that all these firms were to be invited to tender in every case. These lists were prepared without any reference to the necessity for special men being required for special work, so much so that we ascertained the existence of these long lists to be always used for fortification services by having protests from General Officers to reduce the number of tenders they had to send out, as they said most of these firms were not capable of carrying out this kind of work at all.

1292. Have there been any symptoms of a leakage of prices of tenders to contractors?—I should hardly like to say that; no, I do not see how it could possibly be so if the rules are carried out.

1293. Then, summing up your evidence, you say that the present system does not tend to economy, does not tend to efficiency of work, does not tend to speed of execution, and might in certain cases be dangerous to the safety of the Empire?—Distinctly.

1294. (*Chairman.*) You have expressed yourself rather emphatically in favour of the elimination of the Director of Contracts and of his department, and you have described the intervention of the Director of Contracts as having a bad tendency. We have just had Colonel Watson before us, and I think the general impression left upon our minds by Colonel Watson was that the Director of Contracts and his office were mere surplusage, and only exercised a bad influence in so far that letters had practically to go through three departments instead of two departments. You do not apparently consider the Director of Contracts and his department to be mere surplusage, but you give it as your opinion that the department actually produces bad results: No. 1, by advocating bad contractors; No. 2, by over-riding your department in the allocation of contracts; and No. 3 (which is a smaller question), as regards the letting of land. Now, to deal with the alleged advocacy of bad contractors, will you explain how the Director of Contracts and his department advocate bad contractors?—When a general officer writes to us and expresses his opinion, giving us details or referring to certain cases which have occurred under his own supervision, that a certain contractor should not be called upon to tender for any fortification work in his district and that he proposes to leave him out in his list; and when we in considering this know from our own inspections and other things and from collateral sources that this view is a correct one, as we have the same difficulties in other districts and similar complaints, then when this is sent to the Director of Contracts and he adheres to this contractor and keeps him on the List, and eventually this objectionable contractor gets the work, I consider that is a complete case of over-riding us.

1295. That is a complete case of advocacy of bad contractors?—Distinctly.

1296. But in such a case, if the General desired to remove the contractor from the List and you support the General, and the Director of Contracts still persists in requiring you to keep him on the List, cannot your department always appeal to the Secretary of State, who probably in the first instance would act through the Financial Secretary to decide between you?—We cannot succeed at once in getting to the Secretary of State. I could quote an instance. The case of a particular contractor. It was not only the first representation that had been made, but it was one of a sequence.

1297. But you can get to the Financial Secretary?—But the Financial Secretary may give a decision on evidence and on information that we have never even seen. We might perhaps get to the Secretary of State in six months, but our works would all be standing.

1298. But my point is, it is not the Director of Army Contracts who by himself and of his own authority can insist upon a contractor whom you and the General have denounced as unsatisfactory being kept on the List. You are a department of at any rate equal authority with the Director of Contracts, and you can always appeal to the Secretary of State, who may delegate his power in such matters to the Financial Secretary. There is always an appeal available?—Yes; if the Director of Contracts does over-ride us, no doubt he may obtain the approval of the Financial Secretary, but we may not know the grounds upon which that decision is given. There may be references to letters and personal interviews with contractors, of the details of which we know nothing and the General knows nothing.

1299. But you can appeal from the Financial Secretary to the highest court and put your case before the Secretary of State?—I can give you a particular instance where it took more than six months to get to the Secretary of State, who, just a week before he left office, I am glad to say, supported our views. This was the case of a contractor about whom the General gave definite reasons why he should not be put on the List; he did not issue a tender form to this man, and consequently he did not allow his firm to see the drawings, &c., the only things which could guide him as to the work to be carried out. These are secret, and are shown only in the Royal Engineer Office. This particular firm put in a tender in the Director of Contracts' box here and got the contract.

1300. But there was a decision ultimately?—The case eventually reached the Secretary of State; fortunately at the last moment it was referred by the Parliamentary Secretary to us, or else it would have gone to him on an issue other than that upon which the General wanted a decision, I may say.

1301. (*Sir Charles Welby.*) Then it was not a direct appeal from the Inspector-General of Fortifications to the Secretary of State against the decision of the Financial Secretary?—Yes, it was put definitely to be brought to the notice of the Secretary of State; we had to do it through the recognised authority.

1302. But the Inspector-General of Fortifications, you will admit, can appeal to the Secretary of State against a decision of the Financial Secretary without necessarily going through him and incurring the risk of getting stopped on the way. He has that constitutional right. He is on a level with the Financial Secretary, is he not?—I should not like to speak as to that.

(*The Secretary.*) That is laid down in the office procedure; there is no doubt about it.

1303. (*Chairman.*) But my point is, when you said that the Director of Contracts Department advocates bad contractors, that the Inspector-General of Fortifications, if he is dissatisfied, always has a Court of Appeal to go to, and that even if the Director of Contracts Branch was entirely suppressed to-morrow, and there was a difference of opinion between your department and a contractor,—if you wanted to remove a contractor from the List and the contractor wanted to remain on—there would still have to be an appeal to somebody—to the Secretary of State at the present?—I do not deny, and I do not wish to deny, that there is the power; I say that after the course of some six months we succeeded in getting the case before the Secretary of State. But you must consider that there are three different branches of the Department of the Inspector-General of Fortifications; there is the Barrack Loan Branch, which Colonel Watson administers; the Fortifications Branch; and the other. When complaints are made against one man as to fortifications, the Director of Contracts may find out that this man has done most excellent work on a hut in another district, and sets the one against the other; and unless we are to have every paper passed through all the branches, we cannot focus the thing.

1304. Again, when you say that the Director of Contracts is the advocate of bad contractors, that after all is only a matter of opinion. You say a man is a bad contractor; the Director of Contracts may maintain that he is a good contractor, and there is a final Court of Appeal which settles between you. The ultimate responsibility for keeping that man on the List, if you choose to protest, does not rest with the Director of Contracts?—I did not see that I was called upon to consider that question at all; you asked me for my opinion, and I gave it.

1305. Yes, but I want to make quite sure that you thoroughly realise what the system is and what are the remedies open to your department before you give your mature opinion?—I give you my opinion, and I say that it is based on facts, on representations from people who are professional people and have had to do with contractors. I have had a great deal to do with fortification contractors in my lifetime, and I should know more about them than people who have not had such experience.

1306. Your second criticism on the Director of Contracts was that he over-ruled you in the allocation of contracts; that is to say, if tenders come in to the Director of Contracts for a certain work, those tenders would be referred to you with the Director of Contracts' recommendation, probably in favour of the lowest tender, and if you saw reason for not accepting it, there would be a discussion between your department and the Director of Contracts?—Distinctly.

1307. Again, in that case, supposing that you could not come to an agreement—supposing the Director of Contracts held his view very strongly, and you held your view very strongly—the Director of Contracts of his own authority could not himself over-ride you; there again there would be an appeal to a higher court?—But he refers the matter to the higher court, and we get the decision of it; we do not always have the same opportunity of putting our case before the higher court. As I started by saying, he happens to be an advocate in the position of having his evidence all to himself there, the other side not having a look in. You cannot have all these arguments on every paper. If we were to be fighting all these cases, we should never get work started at all.

1308. But the Inspector-General of Fortifications could go and ask for an interview with the Secretary of State, or the Financial Secretary, and could represent his views just as well as the Director of Contracts?—That would mean our first getting a whole large case together about once a week, and it would, probably, mean delaying the work for months.

1309. Do you mean to, really and with mature consideration, say that the Director of Contracts disagrees with you so frequently that in practice he over-rides you once a week?—I am only speaking purely from memory, but I should say we have been over-riden a dozen times in the case of this particular firm in the last two years, and this firm is still a contractor for fortification works.

1310. But the questions would surely not amount to anything like one per week?—It entirely depends; sometimes we have contracts coming on for weeks in succession.

1311. Is the principal reason of the disagreement, which appears to arise between you and the Director of Contracts, because the Director of Contracts generally insists upon or throws all his weight on the side of the lowest tender?—I will not go so far as to say that.

1312. Now, as regards the letting of land, you complained that you had to refer constantly to the Director of Contracts with regard to letting small pieces of land; but at the same time you added that he almost invariably, or invariably I think you said, concurred in your recommendation?—Invariably, I think.

1313. Therefore, as regards that, you cannot say that there is any mischievous intervention?—No.

1314. It is simply that the reference to him may be a matter of surplusage?—It is absolute surplusage; he cannot have an opinion one way or the other.

1315. Or it might be that the Director of Contracts exercises a kind of control, but that the land is always let so well that he always concurs in the recommendation?—The letting is always based on the recommendations of land agents and others, and is, as a rule, put to open tender, and if we see no reason to object it seems an unnecessary reference to him; but it goes to him as being a contract, or an alteration of a contract.

1316. Now, as regards the lists of contractors to whom you apply; how are those lists made?—I could not say; we know nothing about them. I did not even know of their existence until I found the Generals had them; it is done outside our branch.

1317. The General Officer Commanding has the list?—He has the lists, which are arranged by the Director of Contracts with him, I suppose.

1318. In communication and consultation, you think?—Possibly.

1319. (*Mr. Gibb.*) You think, as regards these lists, that you ought to have known of their existence?—I think we certainly should have had some hand in deciding upon them before they are made applicable to fortification services. For instance, I should not have been guilty of anything so ridiculous as to suggest 40 or 50 contractors for carrying out special fortification works in a district, when we know that there are only ten or a dozen to whom it would be advisable to apply.

1320. You have spoken of branches within the Inspector-General of Fortifications' Department, do you know whether the Inspector-General of Fortifications knew about these lists?—They would not come to him in any case.

1321. You do not know one way or the other?—He would not have known.

1322. Do you know that he did not know of them?—I absolutely know that he could not have known; they must have come in through an Executive Branch, and if for fortification services they would come to me, which they did not.

1323. I mean that a good deal of your evidence rather points to defective organisation apart from the question of the intervention of the Director of Contracts. Do you suggest that there is any obstacle which ought to be removed in the way of your reaching the Secretary of State on an appeal upon any question upon which you wish to appeal?—The great difficulty, of course, is in getting cases sufficiently together to bring them before the Secretary of State; it is such an enormous business.

1324. Is it not a good deal a matter of skilful administration. If you found by experience that you were constantly over-riden by the Director of Contracts, and in your judgment, improperly over-riden, could not you raise the general question of policy, by an appeal to the Secretary of State, without necessarily having a separate appeal in every individual case?—Well, to get the Secretary of State's decision on a particular case is always the simpler way of dealing with the thing, and that means a decision to guide other cases.

1325. But you have given us the impression that, somehow or other, you could not reach the Secretary of State?—I said we succeeded in reaching the Secretary of State after about six months.

1326. You could not reach him sufficiently promptly?—No, absolutely not.

1327. Was that in the particular case that you were referring to?—I was referring to the particular case, which we thought sufficiently important to get a definite decision upon.

1328. Can you tell us what steps you took in that case; what was your first step?—It is rather a difficult matter, without seeing the papers, which are very voluminous —

1329. If you would like to refer to the papers before giving us the explanation, I do not suppose there will be any objection?—Where you have a case of a contractor who is dealing with three branches in a great number of districts, he may be a perfectly competent man and may have excellent foremen, and may, therefore, get on perfectly well in one district, or he may do one kind of work in one district satisfactorily, and in the other not, and when a General objects to his employment entirely in any form in his district, that may mean practically objections on the part of the General coming upon papers connected with three different branches of the Inspector-General of Fortifications' Office. The difficulty is to get these papers all together and sufficiently focussed to get a decision. It is very difficult to keep it separate on one particular line in one particular branch; that is why it is such a cumbrous business to get it ready for reference.

1330. I was not dealing with the question whether the Director of Contracts was right or wrong, but simply the question of the steps you take in order to obtain a decision from the Secretary of State?—I think, in this particular case, when the matter first arose, one branch of the subject was whether the man should be struck off the War Office List of Contractors. This went to the Secretary of State, and he decided that he should not be.

Col. G.
Hildebrand.
16 Jan. 1901.

Col. G.
Hildebrand.
16 Jan. 1901.

1331. You raised the objection?—No, I do not say I did; I do not think it was done in my branch.

1332. (*Chairman.*) It was done under the Inspector-General of Fortifications?—Yes.

1333. (*Mr. Gibb.*) Have you any case, the particulars of which you are personally acquainted with?—Yes, but it is mixed up with the other; that is why, I say, it is so difficult to separate my own case.

1334. Now just take your own case, and tell us in your own case what steps you did take?—This case was finally represented through the Inspector-General himself to the Financial Secretary or the Director of Contracts; I could not say which without the papers. It was first on the General's expostulation that we desired that this man should not be invited to tender. My own particular recommendation to the Director of Contracts had been—it was not only made on the paper, but I had sent over an officer particularly to explain my views to him—that it would be most desirable, owing to this friction going on, and the desirability of not delaying or risking the satisfactory completion of urgent and important works, and in view of the General's expostulation, that he should give way, and not allow this contractor to have further fortification work in the particular sub-district until he had finished some such work to their satisfaction.

1335. You sent this personally yourself?—Yes, and on the paper to the Director of Contracts.

1336. It was not from you to the Inspector-General of Fortifications?—No.

1337. But from you direct to the Director of Contracts?—Yes. The upshot of this was that he did not agree to my recommendation.

1338. Did he reply to your minute?—I could not say, because these papers probably got merged in the larger question of objecting to the man in the district at all.

1339. One question more. Do you think the Director of Contracts attaches too much importance to price, and too little importance to other considerations?—I would not say that. I do not think I have said that.

1340. At all events, you suggest that he gives work to bad contractors?—I suggest that he insists upon contractors being invited to tender who distinctly, from a professional point of view, are unfit to be employed on certain special works.

1341. That is to say, you think he gives tenders to bad contractors?—He allows tenders to be invited from bad contractors.

1342. And when they come in he accepts them from bad contractors?—Yes.

1343. Do you suggest any other motive for doing so than a desire for economy?—I have no desire to impute other motives.

1344. At all events, you disagree with the policy which he adopts, rightly or wrongly?—I do not say that. I am only guided by individual cases in which we have been over-ruled. I would not say that there is any special policy.

1345. I mean the policy which leads him to accept tenders from contractors that you think incompetent?—I do not know what his policy is.

1346. You see the results of his policy in his acceptance of contractors whom you think bad?—That is a result, most distinctly.

1347. Then, really, is not your evidence more an objection to the individual views of the Director of Contracts than to the system under which the Director of Contracts deals with tenders and contracts?—I think the system is bad because it is a three-cornered system instead of being a direct system.

1348. But if the Director of Contracts individually took the same view as you do about contractors, would you then have any objection to the system?—It would be no advantage to anybody. It is not now; we can do the thing without the Director of Contracts. I mean to say that we should still have the objection that it causes unnecessary references.

1349. Even although the Director of Contracts always did exactly as you thought he should do?—I frankly said as much in connexion with the land. I said he did not raise any objections; but I regarded them as unnecessary references.

1350. (*Chairman.*) Is it, in your opinion, surplusage?—Yes.

1351. (*Mr. Mather.*) I presume your work is of a highly technical and scientific character—the construction of fortifications?—Yes, different from the ordinary.

1352. And different, for instance, from the erecting of barracks?—I have a good deal of that class of work too.

1353. But some of the contractors that you employ are employed almost exclusively on fortification work?—And on Army and Navy store buildings and things of that sort; I erect them too; so I have both classes of work.

1354. What classes?—Store buildings for the Army and Naval Ordnance Departments, and that class of structures.

1355. But you have fortification work at least?—The proportion may be said, roughly, to be two-thirds the erection of fortification works, and one-third the erection of ordinary building works.

1356. Anyhow, one part of your work requires to be constructed with extreme care in a very perfect manner, and to be of great durability?—It must be absolutely sound and really good work, as it is very solid, and bad work is readily hidden and cannot be subsequently detected.

1357. Therefore, in your choice of a contractor, a matter of the first importance is securing first class work for fortification purposes?—Yes.

1358. And you would invariably yourself, if you had a free choice, select three or four eminent contractors to do your work?—We should have a limited number, I should say ten or a dozen at the most, in any district. In Scotland probably we should have fewer, because, as a rule, we should not invite people from the far south to do it.

1359. When your wish or advice is over-ruled by the Director of Contracts on some rare occasions—for I take it it has not frequently happened, but you have given us two or three cases where your advice as to contracting with a certain firm has been over-ruled and he has given the contract to a firm of whom you did not approve—in such a case it cannot have been given from superior knowledge of the Director of Contracts concerning building construction; it must have been done from some ground of economy only; we must assume that it was done only on some ground of economy?—Yes.

1360. Your contention is, that in this very important work, two-thirds of your work being of the highest importance, it is absolutely essential in the public interest, that the final decision in accepting tenders should rest with those who have to carry out the work?—Yes.

1361. And you are responsible to the country for the work being well done?—Yes, unquestionably, [and general officers have made no secret, that they cannot hold themselves responsible to us for the work when their strong opinion is over-ruled as to contractors.]

1362. Is it of the slightest value to you that any kind of appeal or process of appeal exists within the War Office, by which you can approach the Secretary of State, in order to prevent contractors being employed whose works are not satisfactory? is that any consolation to you or any value?—When things are going really badly, if it is absolutely serious, we have to press an appeal. I do not think it is generally of much practical value; we are so hampered with work and other things, and with the delays caused by any such reference, that we practically have not any choice but to do the best we can under the decision of the Contract Branch, independently of the final result of an appeal.

1363. You think that when there is a good department of engineering constructed for the purpose, it is sufficient security to the country that the money is properly spent, within the judgment of the Inspector-General of Fortifications and his staff?—I should say the proof of that is that a great part of our work is in Malta, Gibraltar, and other places abroad, where the Director of Contracts has nothing to do with the contractors.

1364. Therefore, the intervention of the Director of Contracts' Department, such as now exists, is in your opinion only an obstacle to progress, and does not in any way ensure the country any better work than if you did it yourselves?—Unquestionably so. I may say I have not only had experience of this business here, but I was nearly five years, 1887–91, in precisely the same

position in India, when I carried out the special defence works all over India, which were constructed from a loan of some five millions sterling. We employed in Bombay, Aden, and other places some of the large English and native firms on contracts, and the whole of that was administered by myself. It is only when I come to the War Office that I find my opinion is not considered sufficiently reliable in reference to the contractors to be invited to tender for fortification works.

1365. And as regards giving out work to contractors of whom you do not approve or the General Officer Commanding does not approve, the opinion of the Director of Contracts can have no weight with you, seeing that if he came down to the spot and saw two buildings constructed by two different persons, it would be difficult for him to say whether one was good and the other bad, he not having the technical knowledge?—Quite so. I can quote an instance quite within recent experience. We were requiring some steel gun huts of special construction, which had to be made in a special way, and there were, in our knowledge, only certain firms that had the special tools or the skilled workmen for carrying them out. We passed the list of firms to the Director of Contracts with the specifications, and asked him to obtain tenders from the firms whom we quoted; without any further reference to us additional firms were added to those we had suggested, and who were not in the least capable of carrying out the work at all.

1366. I take it, that instead of having the right of appeal against something you do not approve of, you think prevention far better than cure; that having a straightforward system by which you can carry out your own wishes would be better than going to a department not having technical knowledge of the subject?—I say absolutely that being overloaded with work of very varied and of the most responsible character, all these sort of references would really break one's back, so that one cannot take full advantage of the right of appeal. To worry every case through and push things would take up too much time and labour.

1367. (*Sir George Clarke*.) I want it to be quite clear, there is not the slightest wish on the part of your department to limit competition?—Not in the least. That is with certain qualifications. We object to a very large number of firms being invited for fortification works that are of a secret and special character; we like those to be kept within strict limits; but at the same time we wish to have a thorough competition as regards prices and that kind of thing.

1368. And you do not in the least object to take the lowest tender because it is the lowest tender?—We invariably advise the lowest tender if the firm is, in our opinion, competent; and if the lists have been agreed to by us, we should invariably take the lowest tender.

1369. Has the Director of Contracts any means of ascertaining the merits or efficiency or capacity of contractors other than he gathers from the contractors, seeing them and talking to them?—I do not know; I could not say.

1370. Colonel Watson told us that he thought these frequent interviews between the Director of Contracts and contractors, on the whole, were not desirable; you think so?—I think they are most undesirable.

The witness withdrew.

Lieut.-Gen. Sir CHARLES MANSFIELD CLARKE, Bart., G.C.B., is called in and examined.

1380. (*Chairman*.) You have been Quartermaster-General, I believe, since September 1899?—Yes.

1381. And before that?—I was Deputy Adjutant-General and Assistant Adjutant-General.

1382. And at one time you were Commander of the Army in Madras, I believe?—I was the last Commander-in-Chief in Madras.

1383. The Quartermaster-General, the Committee understand, is responsible for six Departments—the Barracks, the Transport, the Supplies, the Remounts, and for the Army Pay Department?—And for the Army Service Corps.

1384. We are now inquiring into the system of contracts, and as regards the various duties in the Quartermaster-General's Department, as detailed on

1371. How would it be possible for officers in the position of the Inspector-General of Fortifications to be always going personally to the Secretary of State on points of difference; would it not be quite impossible to insist on personal interviews with the Secretary of State to settle these things; it is out of the question, is it not?—I speak from bare recollection, but I have an idea that the Inspector-General of Fortifications did go to the Secretary of State in connexion with the firm I was referring to; but it would not do to be constantly going.

1372. It would be impossible as a general practice?—I should think so, the Secretary of State is not always to be got at.

1373. The Inspector-General of Fortifications is technically responsible for building all fortification works?—Yes.

1374. Can his responsibility be relieved if he is not allowed to choose his agents to carry out those works, and if he objects to some of the agents actually employed?—I say distinctly not, and the General Officers whom he holds responsible say the same thing.

1375. (*Sir Charles Welby*.) I have only two questions to ask you. Is there, as a matter of fact, any case in which the Inspector-General of Fortifications has thought it necessary to appeal to the Secretary of State against a decision of the Director of Contracts, in which it has been impossible for the Inspector-General to get a decision, or in which he has only been able to get a decision after very great delay?—I could not speak for the Inspector-General of Fortifications.

1376. But so far as your knowledge is concerned of his branch?—I think you will agree, from your own experience, that before the Secretary of State can look into a question, he must have the whole thing out and dried before him; and when you have a large case, which may involve a number of different people and different references, it takes a considerable time to get all those together and sufficiently crystallised to be able to put it before him. It is such an enormous and ponderous business that it practically makes it impossible to refer these questions rapidly. I may be quite wrong, but I always imagined that the Financial Secretary's decision on a matter of that sort is almost to be considered as final, except where policy comes in.

1377. But still you are aware that in the constitution of the office the Inspector-General of Fortifications is equal to the Financial Secretary, and in no way his subordinate?—I have understood that the Financial Secretary has the final decision as regards details. Therefore, in a matter of detail, so far as we are concerned, he settles it.

1378. The other question is only one of detail. I suppose you would agree that, so far as you are handicapped by the system under which you have to perpetually deal with the Director of Contracts, that difficulty is aggravated by the fact that you and the Director of Contracts are nearly a mile apart, sitting in offices in entirely different buildings?—Unquestionably it leads to delays.

1379. And those delays would not necessarily be so great if you were both under one roof?—That depends.

page 64 of the War Office list, you would work with the Director of Contracts in respect of all supplies except horses and remounts?—Yes.

1385. And in respect of transport?—No. 1 Department has no connexion with the Director of Contracts—the sub-division 1, barracks—because we get all our barrack stores from the Director-General of Ordnance. As to No. 2, the transports are arranged for by the Admiralty.

1386. That is, sea transports?—Yes, sea transports; and to a certain extent, during this war, for horses by the Inspector-General of Remounts. (3.) Supplies—has obtained all its supplies through the Director of Contracts. (4.) The Remounts have made their own arrangements for horses; it has not been done through the Director of Contracts.

Col. G
Hildebrand.

16 Jan. 1901.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

16 Jan. 1901.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

16 Jan. 1901.

1387. That is a self-contained branch, is it?—Yes. (5), of course, is not concerned with the Director of Contracts, that is, the Pay Department, and (6) hardly at all, I think.

1388. Then it comes to this, does it not, that you are in contact with the Director of Contracts as regards supplies?—Almost solely on the question of supplies.

1389. And in connexion, to a certain extent, with transport within the country—land transport?—Yes, within the country, where it is necessary to hire.

1390. As regards the inspection of goods and supplies delivered, do you rely on the Army Service Corps? They are, in fact, are they not, your agents for inspection?—Yes.

1391. Their duties in relation to you, as far as this work of inspection is concerned, are given on page 43 of the recent Report on Contracts, that of 1900. Perhaps the Secretary might read the evidence you gave?—Perhaps, the quickest way would be for me to look at it; it will save the Secretary reading it.

1392. Will you refer to page 43 of the Report of the Select Committee on War Office Contracts; look at Questions 757 to 764. Will you glance at that evidence, and say whether you have anything further to add to it?—No; I think I have nothing specially to add to it.

1393. That is to say, as regards the Army Service Corps?—I do not think the question of coal was mentioned in that evidence. The contracts for all local supplies are in the hands of the General Officers Commanding districts, with the exception of coal contracts, which are administered here.

1394. Coal contracts are centralised?—Coal contracts are centralised.

1395. Who does the coal contracts?—The Director of Contracts.

1396. With regard to local contracts, I understand each are made locally by the Generals commanding districts, subject to the general supervision of the Director of Contracts?—Quite so.

1397. "Subject to the supervision," means that they are reported to him after they are made, does it not?—Yes.

1398. And that any observations he may have to make would be for guidance in making future contracts?—Yes.

1399. He could not rescind any contract into which they had entered?—I am not sure I should go as far as that. If he thought it necessary to rescind a contract, I suppose he would report to me, and the question would have to go before the Secretary of State; but I have not had an instance of it.

1400. Such a case would hardly arise?—It might occur.

1401. It could occur in theory, but has it arisen in your experience?—It has not arisen in my experience.

1402. The Director of Contracts, if necessary, would make observations upon the contracts, pointing out that they had departed from the regulations in some particular or other?—Yes, it would be his duty to bring it up.

1403. With regard to these contracts, there is no limit of money, is there. I mean the General commanding a district can make a contract for supplies to the district to any extent that is necessary. He is not limited, is he, to a sum of 2,000*l.*, or anything of the kind?—No, he is practically limited by the number of troops in his district; he has to make provision for supplying them with meat, or what not—that is his practical limit.

1404. No question therefore arises if the contract for meat exceeds a certain amount?—All the supply contracts are managed locally, with the exception of coal.

1405. In making these contracts, would the General call for tenders from a certain list of contractors in the district?—No, he would make public advertisement.

1406. Is it done by public competition, not restricted to any list of contractors?—I think it is not so restricted. I have always seen the advertisements made public in the newspapers, as far as I know. The General Officer Commanding would be restricted in this way: I take it that of course he would be furnished, if there were any men who were likely to contract in

his neighbourhood, with a list of those who had been struck off the list of tenderers, such as men who have misbehaved; he would be made acquainted with the names of those people, of course.

1407. That is, if they had misbehaved in any other district outside his cognisance?—Yes; but I am not absolutely certain about it. There is a list of contractors who have failed to execute contracts satisfactorily.

1408. A black list?—A black list.

1409. With regard to these supplies, he is not bound to call for tenders from a restricted list of firms, is he?—Not that I know of. I have always seen the advertisements in the newspapers: "Tenders are required for the supply of" so and so; whatever it may be.

1410. Would that be the same in all districts?—Oh, yes.

1411. In determining which tender would be accepted, would he be guided by any general schedule or recommendations as to price which had been issued to him by the Director of Contracts?—If I was commanding a district, I should rely, to a large extent, on the advice of my Staff Officer for supplies and my own common sense.

1412. But would there be in the district office any guiding schedule of prices received from the Director of Contracts, stating that so much should be given for meat, and so on?—I think not. I am not certain. It is fair and open competition.

1413. And it is entirely left to the General commanding the district, is it, to accept whatever tender seems best to him?—I think so, subject to the general principle that the lowest tender, under ordinary circumstances, should be accepted.

1414. Do you mean by under ordinary circumstances, that the element of time also enters into consideration, that he would give a higher price for an article which was wanted in a hurry?—Yes. Of course, in a district you get to know about the men who have contracted in past years, and you might say, "Smith is a very reliable contractor, has always done his work well." On the other hand you might get a man who tendered a fraction lower, who had not given satisfaction before. I think a Commander of a district would have to take all those things into consideration.

1415. And if you gave it to a man whose price was a fraction higher because he was a more satisfactory and punctual man, might you be called upon to justify that to the Director of Contracts?—Yes; I constantly have had to do it personally with the Government of India.

1416. We are dealing now with the United Kingdom, what do you say as to that?—The same general principle would apply.

1417. As regards the contracts for supplies, the only function which the Director of Contracts performs is the function of a reviewer?—That is so.

1418. That he exercises thereby a sort of control—he is a kind of check, is he not?—Hardly control, I should say, rather, supervision.

1419. Do you think that kind of supervision is useful and desirable in the interests of economy and uniformity?—I think so, on the whole.

1420. As regards contracts for land transport, when you have to move trucks or stores about by hired agency, would the General in command of the district make his own arrangements?—Yes.

1421. Or, if it was a case of transport from one district to another, I suppose the Quartermaster-General would make his arrangements?—From my own personal knowledge, the year before last (when I was in command on Salisbury Plain), if I wanted any transport other than the Government transport which I had, I made my own arrangements.

1422. (Sir Charles Welby.) For the manoeuvres?—It was hardly manoeuvres, it was transport which was required in addition to the Government transport we had at our disposal.

1423. For a special and temporary purpose?—Yes.

1424. (Chairman.) In regard to the contracts for land transport of that kind, are they communicated to the Director of Contracts before they are entered into, or simply reviewed by him?—I do not think they are

communicated to the Director of Contracts before they are entered into, as far as I know; they are very small.

1425. But the principle would be the same, would it not, as with regard to other contracts?—The principle would be the same, I should say; but I am not speaking with absolute knowledge about it.

1426. Then, so far as the Quartermaster-General is concerned, his department would have no complaint to make of the Director of Contracts as being an unnecessary cause of delay and obstacle?—No. Of course the supply branch during the last 16 months has been tried very highly—more so than it ever has been before—and not a single case of delay in the provision of supplies has been brought to my notice; so that I can only say, as far as my supply sub-branch is concerned, the relations with the Director of Contracts have been satisfactory.

1427. And do you regard the Director of Contracts as a force making for economy as a whole?—Suppose a Quartermaster-General was told to make his own contracts for supplies, he would be obliged to have a contract staff for that purpose. He does not possess the staff, as the matter stands now, but he goes to the Director of Contracts, and if the system was altered, it would be necessary to supply the Quartermaster-General, the Inspector-General of Fortifications, and the Director-General of Ordnance with a separate contract staff.

1428. That is to say, it would be a breaking up of one branch into three?—It would be a breaking up of one branch into three.

1429. And almost putting them under three different roofs?—Well, no, not under three different roofs quite—three different offices.

1430. What, if any, contracts for supplies does the Quartermaster-General make apart from those which are made by the General in command in the districts?—Of course all the contracts for supplies in South Africa, or the greater part of them, have been made direct by the Quartermaster-General demanding certain supplies from the Director of Contracts, who finds them for him.

1431. Then, except in the case of operations outside the country, the Quartermaster-General himself would practically make no contracts for supplies?—I think none, hardly.

1432. Would he contract for supplies to send on transports?—Yes, that would be found by his sub-supply branch at Woolwich.

1433. Since the war has been going on have you had to send out large supplies of food and consumable stores of all kinds to South Africa?—Enormous. Shall I relate the procedure? The General Officer Commanding the Communications in South Africa demands anything he requires? His demand is dealt with by Quartermaster-General (3), who writes to the head of the supply branch at Woolwich, instructing him that so and so and so and so is required, and directing him to demand it from the Director of Contracts, and to report in due course whether that demand has been properly met. Then, in ordinary times, the whole of those supplies would pass through the supply branch stores at Woolwich, a certain percentage would be examined and sent out. During the last 16 months the demand has been so enormous that we have had to get supplies direct from the trade without passing the actual stuff through Woolwich. The demand, of course, was made from Woolwich in the same way, but the actual cases of meat and biscuit, or what not, have not all passed through the Supply Branch; they have had to be sent direct from the trade, subject, of course, to inspection.

1434. And put direct on to the ships?—Yes, it has been absolutely necessary to do that.

1435. Does the system whereby you ask the Director of Contracts to purchase supplies for you to be sent abroad, in your opinion, lead to any delay?—I do not think so, because if I had my own contract staff I should equally have to have demands made on them. They would have to carry out the actual transaction.

1436. Therefore, the only delay is the delay that may arise by communication between two departments?—That is all.

1437. Are the provisions made by the Director of Contracts for supply satisfactory, speaking generally?

—Speaking generally, very satisfactory. I can hardly call to mind any complaint. There have been one or two things. Speaking from memory I remember one complaint that preserved milk was not satisfactory. One brand of emergency rations was not satisfactory, but that was not the fault of the Contract Department; it was proved afterwards that the manufacturer had been done by his own people.

1438. When you make a requisition like that to the Director of Contracts, does he buy according to actual specification, or do you state generally that you require preserved milk of such a brand, or preserved meat of such a brand?—We demand so much of each article and give the specification.

1439. Then is it the Director of Contracts whose experience leads to select this or that brand of meat?—Partly.

1440. And, on the whole, has he given satisfaction?—I can only judge by the result, that we have had hardly any complaint as to the quality of supplies from South Africa.

1441. I suppose complaints, as a rule, are not kept back?—Oh dear, no.

1442. As regards the purchase of these supplies, the Director of Contracts appears to have brought some very adequate knowledge of the market to bear, and as to the right quality of the goods to be purchased?—Certainly, that is the business of his branch.

1443. I understand you would see no advantage in making these purchases direct yourself?—No, because, personally, I do not consider that I am qualified; I should have to depend on my contract staff.

1444. And that contract staff in theory, I suppose, would be a contract staff abstracted from the present central office?—I presume so.

1445. A contract staff of civilian clerks who have no particular military knowledge, but who, in the course of their duties, have learned to know a good deal about the market, and the best quality of various articles?—That is so.

1446. (Mr. Gibb.) You have recently, you say, obtained supplies direct from traders to send to South Africa, instead of passing them through Woolwich?—Yes, to a very large extent, that has been done.

1447. Are those the supplies which you have described as being very satisfactory, and not leading to any complaint?—Quite so.

1448. Who is responsible for the normal system of all supplies being sent to Woolwich, instead of being distributed to the consuming points direct from the traders?—That is my branch, Quartermaster-General, 3.

1449. Do you think there is any advantage, in normal times, in incurring the cost of sending supplies from the producing points to Woolwich, and then re-distributing them to the consuming branch?—I think it is not inadvisable, because it ensures a more thorough examination.

1450. But, as a matter of fact, the supplies sent to South Africa have not been dealt with in that way, have they?—The greater portion of them have not.

1451. And they have proved to be thoroughly satisfactory?—Yes.

1452. Although obtained, perhaps, under circumstances that would make it easier for traders to supply bad stuff?—They have all been subjected to inspection.

1453. Inspection at the producing points?—Yes.

1454. My question, rather, was whether that would not be a good system, to a large extent, in your office?—We have to keep up, in normal times, a certain reserve—it used to be for one Army Corps—I fancy; now, we shall have to keep up a reserve for two for a certain period, which is kept at Woolwich, therefore it is necessary, in order to ensure the turnover of that reserve, that it shall come into those stores, and be passed out of them.

1455. (Chairman.) So as to have it fresh?—So as to have it fresh.

1456. (Mr. Gibb.) But that, perhaps, could be managed, could it not, without passing all stores through Woolwich. Are stores for consumption in the districts passed through Woolwich?—No.

1457. They are not?—No.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

16 Jan. 1901.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

16 Jan. 1901.

1458. What stores are passed through Woolwich?—Biscuit, preserved meat, &c.

1459. I mean for what ultimate use are the stores?—For the reserve which we have to keep up, for the possibility of men being suddenly embarked anywhere.

1460. (*Chairman.*) The stores bought by the General Commanding in the district are inspected by the Army Service officers, and consumed locally, are they not?—Yes; that has nothing to do with Woolwich.

1461. (*Mr. Mather.*) Your responsibility as regards supply seems to terminate after having given instructions to the Director of Contracts that you require so much of certain articles, and having delegated to the general officers commanding districts the duty of obtaining their own supplies. After that you do not take much notice of the matter, do you?—Of course, my principal duty at the present moment is with regard to South Africa. I consider myself absolutely responsible for keeping the authorised reserve, which I got fixed the year before last by the Secretary of State at 120 days, and for that purpose the reserve is telegraphed to me every week, and I examine it very carefully; I consider myself absolutely responsible for keeping that up, the provision, of course, of the stuff being made on my demand by the Director of Contracts.

1462. You would take charge of the reserves, naturally, for the purpose of having something in hand; but the general routine for supplying the Army at home, and also abroad, is carried out by your instructions, as to quantity and quality, by the Director of Contracts?—Yes; but I might say contracts abroad are also made locally. Take, for instance, Singapore, Ceylon, and the West Indies, the contracts for supply of bread, meat, and all that class of stuff, are all made locally.

1463. The Director of Contracts has nothing to do with that, has he?—He has nothing to do with that.

1464. I am speaking with regard to his duties in England. You use that department as a means of obtaining from the markets the supplies you require?—Yes.

1465. These articles with which he deals are chiefly perishable articles, are not they?—Yes.

1466. And bought on the markets day by day, and have to be despatched to their destination as quickly as possible, which you, of course, provide for?—Yes.

1467. But the Director of Contracts' duties terminate on buying for you the articles you specify in the best market he can, and informing you of the fact that he has bought it?—Quite so.

1468. And receiving instructions from you as to whether it should go to Woolwich or elsewhere?—Yes.

1469. So that your relations with the Department are of a very simple character?—Yes.

1470. And deal only with one set of articles, namely, consumable or perishable articles, to be consumed daily or weekly?—Yes.

1471. And in that way you find him the most convenient buyer?—I have done so.

1472. I suppose he does not even give you the price he pays?—Yes.

1473. You know nothing about the article but the time of delivery and its quality?—Quite so.

1474. You leave all but that to the Director of Contracts?—Yes, he is responsible.

1475. And he holds a relation to you totally different to that which he holds to other branches of the Service, does he not?—Of course if by complaints which would come in very, very quickly, one had any suspicion there was anything wrong or unsatisfactory things were being supplied, then of course I should go straight to him personally about it.

1476. But there is really not much room for discretion on his part in buying the articles, because you require the best and require them frequently, and he must buy them immediately for you, and must see they are disposed of in the best way, because complaints will very soon come from all quarters, I suppose?—Quite so.

1477. Therefore the whole operation of supply through him is very small?—Very small.

1478. It gives him no trouble, and gives you no trouble?—Quite so. If he did not exist as a separate branch it would be necessary for the Quartermaster-General to have a contract branch of his own to do it.

1479. But he being there, you utilise him as a useful channel to obtain all you want?—Quite so.

1480. (*Sir George Clarke.*) You said you considered the local authorities are quite competent now to make supply contracts themselves, and that that system had worked?—Yes, I think so. We have specially trained Army Service Corps officers, who are there to give the General expert advice.

1481. And you consider that a subsequent review of contracts after being entered into suffices amply to safeguard the public interests of the country, and to ensure that contracts are entered into in the ordinary and regular way?—Yes, I think that general supervision is advisable.

1482. And you think that outside and subsequent review suffices for that purpose?—I think so.

1483. I suppose that in time of war in the field, the supply officers would have to make very large local purchases?—Very large local purchases were made at first in South Africa, but for the last 14 months the local purchases have not been large, except of oxen. We have supplied almost everything except the fresh meat.

1484. But of course, in the transport service in South Africa, the local officers would have to make very large purchases, would not they?—They have done for oxen, but not for much else, except at first. Of course, when the war began, they necessarily had to get whatever could be got hold of in the country, but the supply of animals very soon dried up, and we have had practically to supply everything.

1485. From England?—From all over the world.

1486. Your Supply Branch at Woolwich would be quite competent to make its own contract for supplies, would it not, with the addition of a little clerical assistance?—Yes, I think it would be competent.

1487. Do you know whether the Contracts Branch has amongst its members any experts in matters of supply, any judges of preserved meat or the various things you send out to South Africa?—They have no specific knowledge.

1488. Would not the transactions with regard to supplies be thoroughly of a clerical nature all exercised in the War Office itself?—Yes.

1489. Then is not the cause of your having no complaint entirely owing to the rigid and effective inspection of stores made by your own officers?—And also, I think, by the Director of Contracts' knowledge of the markets.

1490. But, as regards quality, is not the quality tested, and looked so carefully into by your own expert officers, that it is almost impossible that anything that would be likely to give rise to complaints subsequently, could happen?—I think it is caused a great deal by the people who purchase—by the Contracts Branch—they know who are the reliable people in the markets; they have a great deal to do with them.

1491. But you do exercise a very careful inspection?—Not quite so fully as one would like. One has had, perforce, to reduce it to a minimum.

1492. Do you think that the more officers of the supply and transport branches have some knowledge of the making of contracts and purchases, the better it would be when they have to serve abroad?—Certainly, the more general knowledge they have the better.

1493. Especially in the matter of purchases, considering the number of them who serve abroad and have to make their own purchases?—Quite so.

1494. I gather it is your view that as much financial power as possible should be given to districts?—Certainly. I think you would have to limit it to a certain amount, based on the expenditure of the district, we will say, for a number of years. You cannot give a general officer of a district *carte blanche*; I think that would be very unwise; but according to the size and the number of troops in the district, and the number of buildings, which is a matter which could be worked out, I think, that you should give him a sum calculated, say, on the average expenditure on certain things during the last 10 years.

1495. Then your general principle would be great responsibility and trust accorded to local people, subject to expert financial and civil review subsequently?—Yes, and, as I said in the short note that I sent to the Committee, I think it is a very good thing because it develops habits of business and thought in the general officers commanding, which otherwise they are not called upon to exercise.

1496. Do you think the more responsibility devolves upon officers of all classes in peace time, the more likely they would be able to accept the responsibilities which must necessarily devolve upon them in time of war?—That goes without saying.

1497. (*Colonel Miles.*) It was reported by the Decentralisation Committee, I think, that your branch was more decentralised than any other. Do you remember that?—The Services administered by the Quartermaster-General have been to a great extent already decentralised—are the words?—Yes, I think that is so.

1498. As an example of that, may we take the contracts? Are the whole of the meat and forage contracts dealt with by the Generals irrespective of the amount of the contracts, without reference to the Director of Contracts, and referred to him after they are completed?—They are referred to him after they are completed.

1499. Irrespective of the amount?—I think so. His amount is limited in this way: A man, we will say, has a thousand troops at a station, and he may want 1,000 lbs. daily.

1500. For instance, take the meat contract at Aldershot, of the value of, say, 30,000*l.* in six months. Does the Commanding Officer make that contract without reference to the Director of Contracts at all?—Yes.

1501. Is the same true about forage?—Yes.

1502. Forage is bought in the districts, I think, without any reference to the Director of Contracts?—Yes.

1503. With good results?—Yes.

1504. And, as far as you know, have there been any cases of collusion?—There are cases of course—cases of bad conduct on the part of different contractors.

1505. But have there been any discipline cases of a bad character with regard to that?—I do not remember any of late years; I remember one to which I alluded in my evidence in the House of Commons inquiry. That was a very bad one which occurred in England 18 years ago, but of my own personal knowledge I do not know of one since.

1506. Practically, in your department, is the large proportion of contracts made irrespective of the Director of Contracts?—Yes, in ordinary times.

1507. Of course it is quite clear that all districts are fed in this way by local contracts?—Absolutely.

1508. Independent of the War Office?—Yes.

1509. And the contractor may come from any part of the country?—Yes, he may come from anywhere.

1510. It is not a question of local knowledge?—No, if tenders are called for by public advertisement, it is open for a man in the North of Scotland to supply Aldershot.

1511. With regard to your head contracts, they are simple in their nature, are they not—they are not very varied, are they?—No, they are very simple.

1512. And there are not very many questions arising on them?—No.

1513. You would not put them at all on the same footing as the specifications for a gun, would you?—No, certainly not.

1514. Or the specifications for a building?—No, they are totally different; you cannot compare the two.

1515. Generally speaking, if the contracts were changed, it might add a certain amount of clerical work, but not very great, I suppose?—I can hardly say that. I have no practicable experience of working the branch, and I could not say.

1516. With reference to the practice of making purchases by the Army Service Corps, it is of great advantage to them, is it not, to have as much experience as they can in making purchases?—Yes, I think I said just now, the more general knowledge the better.

1517. When we go to war, taking South Africa for instance, you say the purchases were made at the seat of war?—Yes.

1518. And probably in any first expedition, when we immediately find out what is wanted we are driven to purchases of a large quantity in that way?—Yes.

1519. (*Mr. Beckett.*) Do you find that the system of Generals making purchases in their own districts answers well on the whole?—Yes.

1520. Do you think that system might with advantage be extended in other directions?—To what?

1521. As regards works, and so forth?—I do not know that I am quite qualified to give an opinion upon that.

1522. But, anyhow, do you find throwing responsibility on the general gives rise to any disadvantages?—No.

1523. And that proper regard is paid to economy and efficiency?—I think so, certainly; and unless you throw that responsibility upon him, you will never develop the man's power of arranging for various things he has to arrange for.

1524. It increases his experience, you think?—Yes.

1525. You say that the subsequent supervision of the Director of Contracts is desirable, in what way do you mean; suppose it were withdrawn, what dangers would it give rise to?—You might find a district paying ridiculously high prices; this is possible; and I think supervision to see that the ordinary market rate is being followed is desirable, simply from motives of economy.

1526. Do you find there have been cases in which the Director of Contracts has had to point out to some General that he is paying too much?—I have not heard of any; but my experience as Quartermaster-General has not been long.

1527. Supposing, instead of sending these contracts in to the Director of Contracts, they were sent to you, would not that answer the purpose equally well, provided, of course, you had a contract staff under you?—That, of course, would be necessary, and it would have to be a staff well up in the prices, and the rates of the market.

1528. I suppose, from your own point of view, if you had well qualified men under you, it would be simpler for you to give your instructions to them than give them to the Director of Contracts?—I do not know that it would matter; practically it would be the same; the room might be a few yards nearer to me, that is all the difference it would make.

1529. But he practically has to rely on his staff, has he not, just as you would?—Yes.

1530. He has no special technical knowledge of his own, has he?—I take it that with the experience of a Director of Contracts for some years, you ought to have a great deal.

1531. I mean the facts of the case are brought to his knowledge by his staff, upon which he has to found his experience?—Yes.

1532. (*Sir George Clarke.*) Do you know why the Director of Contracts does not purchase horses?—I cannot say. I should be very sorry for him if he had to.

1533. (*Mr. Mather.*) In regard to the purchase of horses, do you find great difficulty in appointing competent men to purchase?—We have had very great difficulty in getting the proper men.

1534. And, I presume, in consequence of that, very great mistakes have been made in the purchase of horses from time to time. I mean horses which are not sound have been frequently bought in a hurry?—Considering the pressure there has been, I do not think there has been more than the percentage you would expect, because there was no large remount staff; it did not exist. The Inspector-General of Remounts has had to get hold of the best officers he could.

1535. Are they a military men?—All military men for purchasing purposes; but the Veterinary Department, which, of course, was the Department upon which he had to rely for passing the animals, very soon gave out; and they are employing now civil veterinary surgeons enormously.

*Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.*

16 Jan. 1901.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

a.n. 1901.

1536. There is no objection to your employing civil veterinary surgeons or civil agents to buy, is there?—We have not purchased except through commissioned officers.

1537. Is there any special reason for doing that?—We thought we had better control over them; they might do something to lose their commissions; they were all commissioned officers, and there was a great hold upon them.

1538. That is, if they did not purchase satisfactorily?—Yes, if they did not do their work properly.

The witness withdrew.

Mr. G. D. A.
F. Wilson,
C.B.

16 Jan. 1901.

Mr. G. D. A. FLEETWOOD WILSON, C.B., called and examined.

1541. (Chairman.) You were Director of Clothing, were you not, from 1893 to 1898, when you became Assistant Under-Secretary of State for War?—I was.

1542. In your Draft Report on War Office administration, which you have communicated to the Committee, you express a strong opinion, I believe, in favour of the abolition of the Central Contract Branch, which, as you put it, now serves mainly as a post office between the military expert and the contractor?—That is so. I think it would perhaps be better to say "the adjustment of the Contract Department" than "the absolute abolition"; you would have to have a machinery on one side or the other; it is rather perhaps a question of transferring it.

1543. You talk of the relations between the military expert and the contractor, but your own position at the Army Clothing Department was that of a civilian administrator, I believe, under the Financial Secretary?—My position at the Army Clothing Department was entirely different to that of anybody else. I was established, and my position was based upon a very old Order in Council, which consisted of a very few words to this effect: "The Director of Clothing is charged with the provision of clothing and necessities for the Army, and with the administration of the Army Clothing Department at Pimlico." That, of course, has since been swept away. In the various changes which took place at the War Office this old Order in Council was perhaps overlooked and remained in force, and it was on that Order in Council that I held my appointment; and that placed me in a position of considerable power and independence; but, subject to that, I was with other manufacturing departments placed under the Financial Secretary.

1544. Quite so; but you were in fact a civilian administrator under the Financial Secretary?—I was a civilian administrator under the Financial Secretary, but I was personally answerable for the provision on the supply side, as it were, of clothing to the Army. I always thought that there was that distinction. I was in charge of the factory and the stores, and from that standpoint absolutely subject to the Financial Secretary; but it was an open question whether I was not almost personally responsible for the issue of clothing to the troops, and, up to that extent, somewhat independent of the Financial Secretary.

1545. When you say responsible to the troops for their clothing, that is to say, responsible to the Secretary of State for War?—Yes, it rather put me in the position of being able to appeal to the Secretary of State if I found a decision below him interfering with my supply of clothing to the troops.

1546. Was that rather an academical question, or did you, as a matter of fact, find it necessary to appeal, by virtue of that peculiar position, straight to the Secretary of State as against the Financial Secretary?—I have, I think, on more than one occasion asked through the Financial Secretary, naturally wishing to avoid friction, that the ultimate decision should be referred to the Secretary of State.

1547. When you went to Pimlico you took no expert knowledge with you, I suppose?—Very slight, none *quâ*. stores, their nature and character; I had my technical officers under me.

1548. You say the Contract Branch now serves mainly as a post office between the military expert and the Contractor; is the military chief Ordnance officer who is in charge of the Royal Clothing Department now an expert as regards clothing in any greater sense than you were an expert?—I should think not personally; he has acquired knowledge, but he certainly was not, I

1539. I suppose there are a great number of men in England, agents for the purchase of horses, whom you might have employed if you had cared to?—Horseflesh is a very curious thing to deal with, and it has a most extraordinary influence on the human race.

1540. Have you any recommendation to make in consequence of your recent experience of the stress you have been under?—I think we shall have to enlarge our Remount Establishment. In fact a Committee has been sitting to draft proposals for that purpose, because the branch was absolutely inadequate to the requirements of the war.

should think, an expert in the true sense of the word in clothing matters when he went there.

1549. He would gain experience, but when he first went there he would be naturally very much guided by his subordinates?—Naturally so, and ought to be so, I think.

1550. As regards the theory that a post office should be suppressed between the military expert and the contractor, if the post office were suppressed, it would be suppressed as between the Contract Department and the Clothing Department, but not as between the contractor and the expert, would it not?—If the head of the department is using the expert and acting on his advice, you must roll them into one. But I should like to point out that the paragraph in my report deals generally with the position of the Director of Contracts and the working of the present system, not only in relation to clothing, but in the many manufacturing and supplying departments of the Army. I did not put this forward only from the standpoint of clothing.

1551. The Committee wish rather to get evidence from you, not on the general question, but as the result of your particular experience at the Clothing Department at Pimlico?—At Pimlico practically the contractor was obliged to come to me and get all the technical information, and find out everything which was either favourable or unfavourable to the materials or stores which he had supplied. He could get nothing of the sort from the Director of Contracts, nor could the Director of Contracts form any opinion as to the character or quality of the supplies which had been furnished.

1552. That is to say, if a demand came to you for so many thousand yards of serge or anything else for the troops?—I made my own demands.

1553. You put forward your demand to the Director of Contracts?—Yes. Would you like me to explain exactly what the system was? In my time I had to control the expenditure of perhaps some half a million on cloth.

1554. (Mr. Gibb.) Would you mind first telling us whether there has been any alteration since?—Yes; the whole thing has been absolutely changed, but I think what I am going to say now applies with regard to the process which takes place at the present moment in regard to contracts.

1555. (Chairman.) Except that the Chief Ordnance Officer puts forward his demands through the Director-General of Ordnance?—Yes, which is another post office. I used to form my estimate at the beginning of the year for how many boots I wanted; roughly speaking, I used to buy a quarter of a million worth of boots and half a million worth of cloth. I used to consult all my technical officers, my supply and store officers, and come to the conclusion that I required so many hundred thousand boots, &c.

1556. Were those officers men who had technical knowledge and business experience?—Absolutely; they were technical men. My chief boot inspector was a man who had worked at his last and worked his way up. My Inspector of Cloth had the reputation of being one of the best judges of cloth in England—Richardson; he had been trained both in the Stroud Valley and in Yorkshire. I made up my mind I would require, say, 100,000 yards of tartan, which is not Scotch cloth, but cloth of a particular pattern. I would then put up to the Director of Contracts my demand. The Director of Contracts would ask me who I suggested as likely to supply that cloth at a reasonable price of good quality and punctually delivered. I would then suggest certain firms which I knew, or

which I had reason to believe would serve the department well, give my reasons, and send them up to the Director of Contracts. The Director of Contracts reviewed the whole of that work, and in many instances took exception to my suggested allotment, and suggested an allotment to other firms, or the allotment of different quantities to the same firms. I then, having only one object in view, which was to get the best stuff as punctually as possible for the service of the troops, and being absolutely indifferent to any complaint of any firm of contractors, generally adhered to my original view. It then became a question of a conference between the Director of Contracts and the Director of Clothing, or one of the Director of Contracts' officers would come down to me. Then it rested a great deal on which of the two was the more obstinate. I believe I had the reputation of being abnormally obstinate. Eventually we came to a conclusion, and the Director of Contracts put all the machinery of putting out tenders, and signing forms, and so forth into work. But it seemed to me always when I was there that there was a reduplication of work in this process. I could never understand why I could not be allowed to place my own contracts, carry the whole thing through, and order my own stuff, for which I was answerable, and with regard to which the Army afterwards had full freedom of criticism. If I could have placed my contracts, I would often have saved a great deal of time, and I am perfectly certain in many cases there should have been no delay in delivery, and, I think, it would have been open to the Director of Contracts afterwards, or an analogous officer, to audit or examine, and call me to book if he thought my contracts had been unreasonably placed. That was the system when I was at Pimlico, and, I think, that obtains now.

1557. Then under that system practically all that the Director of Contracts did was to settle generally, in communication with you, which tender should be accepted?—Practically that was all that he did, in a sense, but, of course, it meant a great deal of work for him to defend his own views, and that is where an enormous loss of time, and, very often, friction arose. He might take, and the officers of the department might take, the view that a certain firm was a promising firm, a young firm, and ought to be encouraged, and even with a few failures it was a good thing to give them a few contracts. Take, for instance, an occasion where it is considered advisable to nurse a firm so as to enlarge the area of supply; well, it is quite obvious that during that period the department is placed in great difficulty, and when you come to deal with munitions of war, or military stores, it is dangerous, because you may find yourselves absolutely out of the stuff with which the soldiers can fight; and that is what I constantly took exception to, and I think the present system does present considerable risk in that way.

1558. But if the Director of Contracts took that view, and you took the opposing view, there would always be an appeal?—Yes, it would go on appeal to the Financial Secretary, and if the Financial Secretary gave it against me, and it was a minor question, I would, naturally, at once accept the Financial Secretary's decision. But if it was a serious matter, such as the supply of boots, without which no army can go into the field, I would at once, and did, more than once, ask to have the matter referred right up to the Secretary of State for final decision. Every officer has that right to appeal, but you can understand that no one wishes to exercise it more than is necessary.

1559. The tender once having been accepted, if the contractor wanted any further information or explanation about anything, he would come to you, would he not?—Constantly he did, and my orders were that every assistance should be given to contractors. I made most stringent rules that no inspector was ever allowed to see a contractor, except in the presence of a clerk or official of a totally different department, so that there should be no risk of collusion; they were constantly there, and I encouraged them to come. The only information they could get up here would be with regard to prices or the paper work, but any technical information which they required they had to get from us, and they were constantly there. New manufactures were constantly coming into our hands, and if we did not show them the class of material they could not get on at all.

1560. (Mr Gubb.) When you say you insisted on the presence of an official of a different department, what

do you mean?—An official of a different branch of my own department.

1561. (Chairman.) As regards an order in progress, were there any means by which an official representing the War Office would be sent down to watch and report upon the progress of an order which had been given out?—Do you mean an officer from here sent to my place down there?

1562. If you had given out an order to a manufacturer, I mean?—You mean if the Limerick Clothing Factory, for instance, had taken a contract for me?

1563. Yes; would anybody be sent down to see if that order was being got on with?—No, the system did not exist, and I constantly represented that we ought to have something in the nature of travelling inspectors—men we could send down to watch the progress. In point of fact, I used to go myself; once or twice I went to Crewe where a certain firm had their works, but I generally went at my own expense and during my leave. I had no recognised official to send out. I did sometimes send one of my men, but generally speaking I took a man not connected with the Inspection Branch and sent him down informally to report to me.

1564. You did that extra-officially?—Yes, I had no recognised staff for that purpose.

1565. Nor had the Director of Contracts?—Not that I know of.

1566. In fact, it was no one's duty?—I am afraid in all public departments the tendency to do that is by means of letter writing. We used to send very strong protests if the contractors were not keeping up to time.

1567. Did you write asking how a man was getting on with an order?—Yes, frequently; but I think that was interfering somewhat with the Director of Contracts' work.

1568. When the work was in an unsatisfactory state, he might give an evasive answer, I suppose?—Yes, it really did not help very much, because the real difficulty with contractors is that they take contracts beyond their powers, and they may be working on Post Office work instead of War Office work, and it is extremely difficult to spot them. You can do it, and I think, if you had a proper inspecting staff, you could keep it in check. Most of the clothes are the same you see; serge trousers are very much alike until you come to put the stripe down and press them out. The postman's trouser is very much like the private's trouser, and you might have a difficulty in identifying them.

1569. I suppose the Director of Contracts would have some general idea of the powers of a contractor, and if a contractor was already full up with orders he would avoid placing another order with him?—Yes, the only difficulty I found in practice was this, that a contractor would see the Director of Contracts, and he would assure him that he had already made arrangements to take on a large extra staff, that he had taken additional premises, that he had plenty of capital at his bank, that he was going ahead, and he was perfectly prepared to make a much larger number of articles than he had hitherto been able to undertake to make. I would know, on the other hand, by keeping my eyes open, that the supply of hands who work on all military stores is limited, especially tailors, and I would know for a fact that there was hardly any spare labour to be obtained. I had some 2,000 people actually at work for me, so that I was well in touch with the labour question, and I have often represented to the Director of Contracts, "You must not believe this contractor." Even sometimes, when he, in perfect good faith made the statement, the condition of affairs was such that he could not get the people and train them in time to supply me with certain stuff by a given date.

1570. You had 2,000 hands under you, and you therefore knew a great deal about the possibilities of the labour market?—Yes, and I used to make enquiries, and perhaps a high-class contractor had been with me that very day and asked me to ease him off a little on account of the difficulty of getting labour at any price. As regards military clothing, if you take Edinburgh, for instance, if there were no trade of military clothing in Edinburgh, that at once would enable me to know that it would take a considerable time to build up that trade.

1571. But the Director of Contracts would have equal opportunities of knowing that, would he not?—Certainly, he would be able to find it out, but I think there

Mr. G. D. A.

naturally would be a tendency in the Contracts Department, if it is a purely Contracts Department, to think of nothing but contracts, and administer nothing but the contracts part of it, and to take the contractor's view rather than the view of the man who has to supply the Army with the stuff.

1572. What do you mean by the contractor's view?—For instance, the view which would be advanced that all these difficulties were very much exaggerated, that they could be surmounted, and he could surmount them.

1573. Does that mean that the Director of Contracts, in his zeal to get as low tenders as possible, would minimise the difficulties?—No, I should not put it quite like that. I do not think the Director of Contracts would be impelled necessarily to take the lowest tender, but he very naturally would like to enlarge his area of producing power. I do not altogether blame him, but the first interest of the Supply Department in dealing with the Army is to have supplies ready to issue to the troops, and that must and ought, from its standpoint, to be the paramount consideration.

1574. But you ought to combine, of course, economy as far as possible with punctuality and efficiency?—Of course.

1575. When you were in Pimlico, were there many complaints of the contractors being in arrears with their deliveries?—Incessant; my complaints were incessant on that point. There were perpetual minutes on that subject going on between me and this office.

1576. When you asked the Director of Contracts to obtain a given amount of any article, did you put on the requisition the time within which you wanted it?—Yes, all contracts are time contracts.

1577. Did you put a definite date?—Obviously that must depend on the quality of what you were asking for, and when you wanted it; you make your contracts ahead, and name your time according to when you want them in. You might have a sufficient store of boots to go on with for a certain time. Then, for instance, with clothing, you must consider the wool sales; it does not necessarily follow that you want the cloth the very next day, but you name a date and various dates on which certain quantities of clothing should be sent in.

1578. If you gave a date on which the contractors could not supply, would the contractors represent that to you?—Yes.

1579. And you would alter the date?—Yes. When I named dates I had the contractors with me and asked them: "What is the earliest time you can give me this; it is no use my pressing for January if you cannot give me it till March."

1580. But in spite of that there were frequent delays?—Yes, we had one special case of a large contractor who placed my department in a very grave position. He took an enormous contract for the Army, and then took on the Post Office work. He also took a large contract for the Egyptian troops, and he knew that the Post Office and Egypt would be merciless, so he put aside our contracts. I have always worked very cordially with the Director of Contracts; I never would have put a duty which was obviously embarrassing on him, and he would not have suggested a duty which would have been embarrassing to me.

1581. Before you made your requisition you would adjust the matter with the Director of Contracts, would you?—Yes, we would find out as much as possible everything connected with the contract.

1582. And in spite of that you had these difficulties, had you?—I have a very vivid recollection of what I have said. I would rather not name the firm; they have done better since; but I was very anxious that very severe notice should be taken of it, because they put us in a position of very great danger; we were absolutely without certain clothing altogether.

1583. In the case of stores, would no penalty be enforced?—I could not enforce it; that is entirely for the Director of Contracts. I had nothing to do with that.

1584. Would you have no say in the matter?—None whatever, except that I would urge in my minute, pointing out the state of affairs, that the most stern measures should be taken.

1585. If the Director of Contracts chose, instead of taking these stern measures to take lenient measures,

he would not consult you?—No, not in the least; I should have no voice whatever in that.

1586. (Mr. Gibb.) But you would have the power to appeal, would you not?—No, that would not be within my jurisdiction at all.

1587. But that would be a question appealable, would it not?—It would not have been within my province. I should have been properly told, "That is a question for us to consider; you make your presentation, and we will punish him as we think fit."

1588. (Chairman.) In cases in which you asked the Director of Contracts to buy in default, where you said it was necessary to have cloth at a particular date, would not he act on your recommendation?—Yes, because you must have the stuff; eventually you get the stuff; there can be no doubt the stuff will be obtained in the end, but the real point is, whether undue and dangerous delay does not occur between ordering the stuff and getting it.

1589. I suppose, with regard to the articles with which you dealt, buying in default was the general remedy, that is to say, in regard to such articles as you could buy in default?—Some things you could not buy in default. We always had enormous difficulty with metal work, helmet fittings, and that sort of thing; there is no sale for them; they are not a trade article, and the moment you have to deal with what is not a trade article you are largely in the hands of the contractors.

1590. Is it your general view that the department under the Director of Contracts is mere surplusage?—No, I do not say that at all; I do not go the length of saying that, but what I do say is, that I think if the system were altered, and the heads of supply departments were allowed to do their own contracting, the work would be more expeditiously done; the contractors would have one master, so to speak, and there would be no nonsense in trying to work one off against the other. They would come to me with a whine, and if I would not listen to them they would go to the Director of Contracts, and he would take a more lenient view, perhaps. All that would be done away with; you would deal straight with the man who supplied the goods, and save an enormous amount of time.

1591. All that amounts, does it not, to surplusage?—Yes, but I did not want to put it in that way, because it sounds like an attack on a brother officer. I think it would be better to break up the Director of Contracts' Department, and let the Director-General of Ordnance and the various branches make their own contracts.

1592. Then the operations of the Director of Contracts, so far as your Pimlico experience is concerned, are actually injurious?—It is on that experience, and it is according to that experience that I have written what I have written in this report.

1593. You do not think, then, that the public gain any advantage from any general knowledge of the markets on the part of the Director of Contracts?—Yes, there are advantages as well as disadvantages in any system, and I think it is quite right that the Director of Contracts should be able to be in touch with the state of the markets on all points, and that it is convenient to get them focussed together; but I think much the same result might be arrived at from the point of view of statistics and general control, if that were done by a registrar and auditor rather than by a Director of Contracts.

1594. Does that mean that instead of the present Director of Contracts you would have a small central department charged with collecting statistics and information about the market and reviewing contracts?—I think you might have a certain officer or officers in the central department or the finance department. I think, as I have indicated, the difficulties which arise in connexion with deputations and strikes, and that sort of thing, are so closely associated with the parliamentary work of the department that it would fall in conveniently with the central branch. I think what I may call a check on the reasonableness of prices ought to go to the finance section, which we have got, of course.

1595. Which would be still central office?—By central you mean here in Pall Mall?

1596. Yes, but not attached to the clothing department?—Quite so. The various supply departments, I

think, should make their own contracts and provide their own stores, but I would not let them have anything whatever to do with what I might call the Parliamentary aspect of Government buying, or anything of the sort, or with the checking of the conditions under which those contracts had been placed; I think there ought to be some sort of control.

1597. Do I understand your proposal to amount to this: that the supply department with the expert knowledge they have in many cases, should make their purchases, but that in the case of purchases which are effected under the Quartermaster-General's Department in the military districts, those purchases when made should be reported up here for review and observation by some central department?—That would go, as I have indicated in my report, to the Accountant-General.

1598. Not for making the tenders, but with a view to pointing out when they have gone astray?—Yes, if I may say so, the audit should be done up here.

1599. That is scarcely audit, is it?—I have used the word in inverted commas; I mean as separated entirely from the making of the contract. I would prefer to repeat exactly what I have written on this point. "Following this principle, labour questions, &c., should remain under the Parliamentary officials. They should, however, be dealt with in the civil branches immediately under the Secretary of State and his assistants. The registration of contracts should be a function of the Accountant-General, who should also have the power of criticising them by way of audit. This would supply a grave deficiency in the present scheme. The vast amounts authorised by the Director of Contracts, unlike all other expenditure, escape altogether from audit."

1600. He reports on himself, and instead of auditing you would say by way of review?—By way of review—criticism in fact—general criticism of the work.

1601. (*Mr. Mather.*) Would that be a constant criticism from week to week, or would you propose the contract should go up from time to time to be examined; to have any influence on the business of the department it would be necessary to have a check or supervision frequently, would it not?—I think, as the accounts came in, there should be a sort of test examination.

1602. Would not that be a new department of the Accountant-General's Office?—The Accountant-General would practically be doing what I understand the Director of Contracts now does in the case of those contracts which are now placed by the Quartermaster-General in the districts. I would not go into everyone, but pick out what I would think a bad case; that would be quite enough check.

1603. (*Chairman.*) I think you told the Committee, when you were at the Clothing Department, at Pimlico, you were very much assisted by civilian experts, who had actual trade experience?—Yes, they had all trade experience.

1604. In your communication to the Committee you rather lay down the principle that the military department should be manned entirely by a military element, and that the civilian department should be manned entirely by a civilian element?—That is as to the clerical part. I have not dealt with the technical people at all, but I may mention that at Pimlico I always took a military expert, if I could find him. I turned mine, in a sense, into a military department. I would not have a woman who was not either the daughter, wife, or widow of a soldier, and I would not take a man who had not served in the Army in some capacity. The only case where I was debarred from doing that on a large scale was in the boot and cloth examination section, because there you had to have absolute experts, so to speak, to do it. Of course I had my people in the clothing department who were also civilians and men who had gone through the thing at various places, but I frequently found my inspectors were able to train viewers from ex-soldiers in the place, and then I always took them. We used to train men, of course, and there is no reason why that should not be done if it became a military department. We have now young Engineer officers watching the manufacture of steel at Cammel's; when they joined the Army they knew nothing about the manufacture of steel.

1605. (*Mr. Beckett.*) If the contract office were broken up as you suggest, do you think there would be any danger of competition. Supposing there were a certain number of contractors under the Quartermaster-General,

and a certain number under the Inspector-General of Fortifications, there would be no danger of their going to the same firm. I suppose?—You mean competing against each other.

1606. Yes.—There might be, but first of all most of them deal with different articles; in any case there would not be any more than there is already with public departments. As I have indicated in my case, I used to be handicapped by the Post Office and other departments putting out contracts.

1607. But some of them put out contracts through the Director of Contracts, do not they?—Some do and some do not. I think the Post Office do their own, the Admiralty do a good deal of their own. I think it is only in the Ordnance that anything is done for the Admiralty.

1608. You say that a certain contractor failed in his contract, because he knew the Post Office and Egypt would be merciless. Do you think the War Office would be more tolerant?—There is an impression that the War Office would be more tolerant, certainly, than the Egyptian Government.

1609. Do I gather if the War Office were more severe in exacting penalties there would not be so many delays?—I have always held that the infliction of fines ought to have been carried out much more rigidly than it has been.

1610. Supposing the infliction of fines rested with you or the head of a department, do you think the power would be exercised with proper consideration?—Undoubtedly. For instance, take the case of a helmet maker. He is a man who makes his helmet in London, but is dependent on Birmingham for his metal fittings. There might be a strike in Birmingham, and, I think, it would be very unreasonable not to take that into consideration.

1611. You think, on the whole, contractors are dealt with justly, do you?—Yes, we are too much at their mercy to drive them; we are very much in the position with contractors that landlords are with farmers; it does not pay to turn them out.

1612. You referred to the nursing of firms. Do you think that that is necessary?—I think you do want to nurse firms, and we used to do all we could to nurse new firms if they were firms of promise; otherwise you would be very likely to have a ring against you.

1613. You do not think the interference with the Director of Contracts is necessary to provide a proper amount of nursing?—No, I think the head of a supply department is so much interested in getting good stuff, and getting it punctually, that he will always do his best to carry his contractors with him.

1614. In your discussions with the Director of Contracts as to the contractors who should be employed, upon what grounds do you find the objections to the choice made by you were based?—They varied. Very often it was lower price; very often it was because they took a different view to what we did. One of the things the contractors were very fond of doing was to come here and assure the officers of the Contract Department that they could not get the cloth. Then we would prove, or try to prove, that there was good reason for not giving more cloth; that they had already more cloth in their possession than they had turned out garments for. The tendency is, of course, for the head of the Contract Department to support the view of his officers, and the tendency of the Director of clothing is to support the view of his officers, which led to the extra delay. That is alluding to the case of believing or not believing the report of a contractor. We had the practical dealing with the contractor over the actual stuff; they had the theoretical side to deal with. Sometimes, I daresay, they were right and I was wrong, but it led to discussion and waste of time all the same, and it was in those discussions between the two departments that the contractor used generally to get out and escape his penalty, and it was his object to get out. It gives him time which he could not get if there was only one man to deal with.

1615. On the whole, do you recommend a re-adjustment of the Contract Department?—I do, on the lines I have indicated.

1616. (*Sir Charles Welby.*) If the system which you advocate had prevailed when you were at Pimlico, would you and your staff have had the sole responsibility of determining, not only the wants of the Army with regard to clothing, but also making up the stuff

*Mr. G. D. A.
F. Wilson,
C.B.*

16 Jan. 1901.

Mr. G. D. A.
F. Wilson,
C.B.

16 Jan. 1901.

and purchasing the finished article and inspecting it?—No, you are mixing up two things. It would not have devolved on me or anybody else to decide what would be wanted for the Army; that would come when the estimates were framed here.

1617. But you were responsible for keeping up the stores?—Yes, within my vote. Once told my vote for the year, within that vote I should be answerable for keeping up the supply of stores.

1618. In the event of any defective stuff finding its way into the service in those circumstances, and finding its way to the field in South Africa, and misfortunes thereby arising, do not you think that you and your staff and the contractors you deal with would have been open to the charge of being too much a close preserve?—But the Director of Contracts has no knowledge of the thing being good, bad, or indifferent.

1619. But the Director of Contracts has a voice in the choice of the contractors, and exercises, to that extent, a check on your action, does he not?—Certainly; I see your point.

1620. Do not you think that of some practical value?—Of course, all checks are of value, but I am not at all sure that you do not get a divided responsibility. Of course, it is impossible to deal with it now *qua* Director of Clothing, because the system is changed, and I am rather afraid of the Committee misunderstanding the situation.

1621. If the system which you advocate was adopted now, the Director-General of Ordnance would be in regard to clothing, precisely in the position you were in when you were at Pimlico, would he not?—The Director of Ordnance would be. I think if you had a clear case of bad supplies getting into the field, you would probably have very great difficulty, under the present system, in finally deciding and making it clear to others that the decision was a just one, that either one or the other was to blame; whereas, if the Director-General of Ordnance had the whole of the contracts in his own hands, there could be no question at all about it. He would be the man to go at. Now, he would probably say it was the fault of the Director of Contracts, and the Director of Contracts would say it was his fault.

1622. My point, for what it is worth, is that under such a system there would be more risk of collusion between the inspectors and contractors than under a system with two branches?—No, I do not think so, because the Director of Contracts has nothing whatever to do with the inspection. The chances of collusion between inspectors and viewers and contractors are not, in any way whatever, affected by the Director of Contracts.

1623. I should like to put a question to you in your capacity as Assistant Under Secretary of State. You are aware, I have no doubt, that the Director-General of Ordnance's Department has grown very largely by the addition of ordnance factories, and in other ways?—Yes.

1624. And, of course, the creation of a contract branch under him, would further add to his responsibility?—Undoubtedly.

1625. Do not you think there is some danger of overloading the Director-General of Ordnance?—That, of course, goes into the question of the administration of the department. I should say undoubtedly, whilst you would add to his work on the one side, on the other side you would take away a good deal of work which results from this constant difference of opinion and reduplication of work. I am not in a position to say, as regards the Ordnance Department, how much more it would throw on the Director-General of Ordnance, but when I was at Pimlico I would gladly have taken it over with a small section of the branch to do the clerical work.

1626. But apart from labour, it would involve a centralisation of liability on a single head, would it not?—Yes, but I think the great responsibility lies in inspection. I think there is an amount of responsibility lying in the selection of firms, but it is not comparable to the liability which attaches on the inspection of goods and passing them into the public service. You see in all Government contracts you have the two dangers of corruption and pressure; in corruption, the personal factor comes in in whatever system you have; you always run the risk of it. With regard to pressure,

political or departmental, or otherwise, that is a danger which may be bigger under one system than under another, and I do not think the change would in the least degree increase it, but would rather minimise it.

1627. (Sir George Clarke.) I understand you would not be imbued with prejudices which are sometimes supposed to attach to military officers?—I think the whole tenor of my memorandum which I have placed before the Committee would be the other way; and in addition to that I have, perhaps, a reputation of taking an over-military view.

1628. Your personal experience appears to coincide exactly with that of the military heads of departments. It was your opinion that your responsibility was unduly interfered with by the action of the Director of Contracts?—No, I do not wish you to imply that the Director of Contracts was not perfectly justified under the system in doing what he did do. It was the system I objected to, not his personal action.

1629. But under the system your power was not sufficient for the responsibility, was it. You were responsible for providing clothing for the Army?—Yes.

1630. Without complete power as to the allocation of orders, and without complete control over the contractors you employed, were your powers sufficient to enable that responsibility of yours to be a real one?—Bricks have to be made without straw, the Army got its clothing under that system, so that it cannot be said it could not be done; but I think it would have been better and more expeditiously done if I had had the power which you indicate.

1631. You have stated, I think, that delays in supply of clothing to troops could be traced to circumstances which you could have removed if you had had more power?—I would prefer to put it that the risk of those delays would have been minimised, because I had greater knowledge of the condition of the contractor, in my opinion, than the Director of Contracts, sitting up here and being out of touch with the actual work, could possibly have.

1632. Then, as far as your experience goes, the Director of Contracts' work is purely of a clerical nature, is it?—No, I do not say that; I have never been Director of Contracts, and I do not know exactly what his work is or to what extent he goes beyond the relations which existed between him and me, as Director of Clothing; but I do say if the supply departments had the placing of their own contracts, you would have greater security that the stores would be available for the troops when wanted. On the general question I do not think I would prefer to go very much outside what I have written here, which conveys my views.

1633. You gave the Committee to understand that contracts were sometimes given out to firms who could not carry them out?—Certainly given to firms that did not carry them out punctually and satisfactorily.

1634. And firms that you might have been able to say would not be able to carry them out satisfactorily?—Yes, I think there are cases in which I have taken the view that contracts should not have been placed with certain firms, and I think experience afterwards proved I was right. I do not know that I can now name the cases, but, no doubt, the papers could be found to show it.

1635. After reading the evidence before the Parliamentary Committee on Contracts, and some other evidence we have had given before us, there seems to have been a tendency, sometimes, towards tenderness to firms of contractors who were not altogether satisfactory in regard to their supplies; was that your experience at Pimlico?—I would have no knowledge of the reasons which actuated the Director of Contracts in selecting certain firms beyond those which he gave me as his reasons for so doing, nor would I be in a position as Director of Clothing, to know what had taken place in his department. There might have been considerations other than those purely of supply with regard to which I have no cognizance at all.

1636. Would an appeal be made to you to take a contractor whom you thought was not satisfactory?—I think there were cases, but they were cases in which it was almost a question of whether they would carry out their contract in time; and I have been overruled, undoubtedly, and the contract given to firms which did not produce the stuff; but that was only the result

of a difference of opinion between the Director of Contracts and myself, and, I daresay, in many cases he was right.

1637. (*Mr. Gibb.*) Did the Director of Contracts, in his conversations with you, give you his reasons for his action fully and frankly?—Yes, we were perfectly frank with each other.

1638. You rather suggested there might be some reasons with which you were not acquainted?—I would only know the reasons which he gave me, just as I would give him my reasons.

1639. I did not know whether you were suggesting there were probably other reasons which he did not disclose?—There might be. Supposing you had a contractor who was also supplying goods to the Admiralty, which they had reason to think were not satisfactory, the Director of Contracts might be in possession of that information, and I might not be in possession of that information. He might have gone to the Financial Secretary or anything might have taken place between him and the Financial Secretary on the subject of a contractor, that I should have been absolutely ignorant of.

1640. (*Sir George Clarke.*) Would it happen that you might be asked to relax your standard of quality in favour of contractors?—That was a very common source of difficulty. If I made rejections the contractors would naturally make an appeal. If I thought the stuff was bad I would not take it and hold it out and say, "I have gone into the whole matter; I am not a technical expert, but I have gone into it with my inspectors; I am perfectly satisfied it is bad stuff; I can see it is bad stuff, and I am not going to take it." Of course, we had all the technical tests which settled it outside the question of argument; but sometimes we had cases of dye and very often cases of cut, and I would go into it and refuse to take a supply of clothing. Then the Director of Contracts would very likely say to me, "Are you sure you cannot take this stuff; you seem to be very severe; they tell me you have tightened up inspection," and so forth. Cases did arise where his view and my view still remained different, and the matter would go to the Financial Secretary, and the Financial Secretary would adjudicate upon it; perhaps send for me and hear what I had to say; and my answer to him was invariably the same, that the standard of inspection ought to be maintained as high as possible; that I was answerable for the supplies to the troops, and with great respect I must absolutely decline to take anything which my inspectors would not pass. That is what might and did take place.

1641. Then after you had refused the Director of Contracts to relax your standard, I suppose your decision would be absolute, and you would not be overruled?—No, in one case I remember I was overruled; the Financial Secretary said he did not think my objection was reasonable, and he considered that the exception which had been taken to the goods was ridiculous, he did not use the term offensively, and he overruled me and said they ought to be taken. He had no motive in doing so beyond wishing to do what was fair to the contractor, but I held out and flatly refused, respectfully but distinctly refused, to take this clothing, and said if I was to take it I would only do so on the written order of the Secretary of State. That particular lot of clothing went into the Secretary of State's room; I was not present, the case was adjudicated on in my absence, but the result was I was told I need not take the clothing, and my objection was upheld. That was the only case I remember in which I was overridden in order to take material which I considered not up to standard.

1642. Then I take it, if a weaker and less independent Director of Clothing had existed at that time he would probably have been overruled, and would have relaxed his requirements?—I can hardly answer that.

1643. As a question of general and national importance, do you think it advisable that vast batches of contracts should be directly administered under a political head?—They necessarily must be so if they are administered under the authority of the Secretary of State.

1644. The contract branch is now directly under a political head, is it not?—Yes.

1645. Do you think that, on the whole, is advisable in the public interest?—I really do not know whether I am justified in answering that question; I could give

an answer, but I do not know whether it would be proper for me to answer the question.

1646. (*Mr. Mather.*) Apart from the experience you have had as Director of Clothing some few years ago, are you familiar with the duties of that department in its other branches?—No. I have no knowledge at all beyond what has come under my observation, seeing the papers in the office.

1647. I want to call your attention to the definition you give, in your memorandum, as to the contract branch not fitting properly into our Army system, "which assigns the supply of arms, equipment, stores, provisions, clothing, &c., to the military." Those words somewhat perplex me, because they are scarcely in accordance with your general argument against the contract department. Here you describe the Director-General of Ordnance as having already the right to "demand stores, make stores, inspect stores, keep stores, and issue stores," without, I assume, the slightest interference on the part of the contract department?—No, in many cases he has to face the interference of the contract department.

1648. I thought, perhaps, as you were intimately connected with the contract department, you might say whether this was or was not a clear exposition of your views read in connexion with the context: "But when, in the process of manufacture, he" (that is, the Director-General of Ordnance) "wants to use iron, or nails, or cloth, he goes to a civilian department to buy them for him." As a matter of fact, the contract department buys everything for all departments, does it not—not only iron, and nails, and cloth, three items which come under the department of the Director of Clothing, but all the other departments, the department of the Quartermaster-General, the department of the Inspector-General of Fortifications, and the general officers commanding districts? He has to buy an infinite variety of things—guns, electrical machinery, and so on—has he not?—Yes, quite so; but you see I have put here "e.g.," giving this as a specimen. I might have put the Quartermaster-General as doing the same thing with his stores. I am familiar with the general practice, but I thought you were dealing with the minute detail.

1649. We have it, in connexion with all the other Departments, that he exercised pretty much the same influence as you have described him as exercising in the Department of Director of Clothing?—Quite so: I did not mean to quote that case as the only one, but I quoted it as a specimen or example.

1650. Since the contract department is existing, I presume it has been established under some very definite idea as to its utility. It has continued in existence for a considerable time under the sanction of Parliament, several Secretaries of State, and, generally, with the concurrence of the high officials of the War Office. Might I ask your opinion on this question: While it would be possible for the Committee to agree with your general view that the Department interferes too much with the responsible heads of the various branches of the service, would it not be a convenience to these various branches who require the materials passing through the department to use the department for the purpose of obtaining all they required for their respective uses?—I think the Director of Contracts Department was established at the time we had a Surveyor-General of Ordnance, and the Director of Contracts was, practically, his buyer. In those days you had a Director of Supply and Transport, who did that work which is now done by the Quartermaster-General, and he was a civilian. Therefore, what used to be done by civil departments is now done by military men at the head of military departments, and I think it would only be completing the change which has taken place if the heads of the military departments were allowed to provide their own stuff. The Surveyor-General controlled all the supply and manufacturing departments, and it was natural that he should have one buyer. The Surveyor-General has been abolished, and his work and responsibility broken up into three different and independent military departments, each of which should control his own purchases.

1651. Taking that as the more perfect plan, in your opinion, for the future, do you agree that the staff of the present Director of Contracts would have to be divided amongst the four other military departments, if they are to obtain the same information as he does as to what is the best market to go to for all that is

*Mr. G. D. A.

required, or, otherwise, to perform all his duties. They would require to have divided amongst them a staff equal to his in that case, would they not?—No, I do not think so, because, taking the case of Pimlico, my contention is that the greater part of the technical knowledge in connexion with clothing was received from us at Pimlico, and if I had taken over the Contracts Branch, all I would have required would have been a small clerical establishment for the work of putting out the tenders.

1652. Do you know that the Director of Contracts employs some 60 members on his staff?—I do not know the exact number. I know it has been increasing by leaps and bounds; I do not know what it has reached.

1653. If that Department were suppressed, and the work done there were done under the military authorities in the respective military departments, do you think less than 60 members of the civil staff connected with those Departments would do the whole of the work now done?—I should not like to pledge myself to numbers. I will put it in this way: In my opinion, there is now a re-duplication of work, and obviously, if you cease that re-duplication of work, you ought to be able to materially reduce the staff, and I think you could materially reduce the staff for that reason.

1654. Under the change recommended in your memorandum, would not the Accountant-General's become a much more important office than it is at present?—I would not say that; it would be an important addition to his duties.

1655. I will put it in that form; there would be an important addition to his duties in consequence of his having to review the work of the military departments having power to make their own contracts?—Yes, but a very small staff could deal with that.

1656. In your opinion, it would make a small difference?—Yes, he would have to have one responsible officer of a certain status, and a very small bureau, to deal with that matter. After all, if you take the Board of Trade, which deals with the whole of the trade of the country, it is a relatively small department.

1657. (Sir Charles Welby.) I see in your memorandum you put the normal peace staff of the Contract Department at 26?—That was the normal staff. I will not say it was the normal staff on the day I dated this particular paper, because I had it printed on that date, and wrote it some time before, but the normal staff when I took it was at that figure, so that it has trebled.

1658. Owing to the war pressure?—Yes; and before that it had begun to increase very much.

1659. (Mr. Gibb.) You say the responsibility mainly lies in the inspection?—Yes, for passing goods into the Service.

1660. That being so, are you not rather afraid of putting the inspection and the placing of contracts under one departmental head?—Not the least, because you have practically got it now. Whatever voice the Director of Contracts has in choosing a contractor, he has nothing whatever to do with the rejection or acceptance of those stores into the Service.

1661. But if there were collusion at present, it would have to be between the officers of two departments, the Director of Contracts and the inspector?—No.

1662. If a trader were in collusion with an inspector, the inspector, to make the collusion practicable, would have to get the contract placed with the trader, would he not?—If the man had not got the contract it is quite obvious he could not get improper material passed.

1663. Supposing there were such a case as an attempted fraud, the first step necessarily would be to first get the contract placed with the trader, and, secondly, to get the goods passed by the inspector, would it not?—If the conspiracy were as big as that, all that the contractor would have to do would be to bid a very low rate, and it would be absolutely certainly taken.

1664. Then, you see, the fraud would be no advantage?—Certainly it would if he could pass bad material which cost a great deal less than what he undertook to provide it for. That is where your fraud comes in between the inspector or viewer and the bad supplies.

1665. That is one class of possible fraud, but at present you have the check, have you not, of the contracts being dealt with by the Contract Department and inspection by the Supply Department?—That is only in regard to the man getting a contract; it does not

protect you in the slightest degree against the passing of bad stuff, once the man has got his contract.

1666. You would put the Director-General of Ordnance in the same position as the Director of Clothing was in, I understand. You described, did you not, the former position of the Director of Clothing as a very powerful one?—Yes, in reference to its being subject to the Financial Secretary.

1667. Would you give all those powers to the Director-General of Ordnance, plus the power of purchasing?—He has them already. I would not give him anything except the power of purchasing; he has everything else.

1668. The Director-General of Ordnance could not personally execute all these duties, could he?—No, of course not; he delegates them to the various officers of his staff.

1669. So that there would be a purchasing branch in his office?—Yes.

1670. What advantage would you get from having a purchasing branch in the Ordnance office, instead of a purchasing branch in the Contract office?—I have endeavoured to explain that already in this way: That at present a great portion of the work connected with the purchasing branch is already done in the Ordnance Department, that the business knowledge which enables the Director of Contracts' office to deal with the question is largely knowledge for which he is dependent on the Ordnance Department, and that that necessitates in itself a re-duplication of work. If, therefore, you could have the one person purchasing, as well as dealing with the stores, I think you would get the work done more expeditiously, and get more satisfactory supplies.

1671. But the description of the work we have got is this: The Director of Contracts gets requisitions; he buys the stores according to the requisitions; he makes the contracts, and then his responsibility ceases?—Yes.

1672. In regard to the steps up to contract, what duty is there which can be better performed by a technical department than by a purchasing department?—I confine my question to these particular duties remember, namely, the duty of purchasing articles requisitioned according to specification?—I do not accept that view.

1673. I am putting to you the description of the duties of a Director of Contracts, which we have got from the Director of Contracts?—I am afraid I do not quite see your point now.

1674. I am asking you this: The Director of Contracts gets a requisition, he advertises for tenders, gets tenders, accepts one, and makes the contract, and then passes it back to the Requisitioning Department?—Yes. Then you ask me what advantage would accrue by an alteration in that. I can answer you at once. The process which is gone through in the interval, between the receipt of that requisition and the placing of the contract, necessitates a constant interchange between the two departments, the smoothing of differences of opinion between the two departments, and the ultimate result is sometimes in entire opposition to the strong views held by the Supply Department which has to receive the goods in the end.

1675. But every witness has told us that there is no delay complained of between the sending in of the requisition and the making of the contract?—I do not agree to that, that is all I can say—I do not accept that as my view.

1676. I agree the witnesses have complained about differences of opinion as to whether a particular tender should be accepted or not, and the delay in carrying on a discussion as to that point; but as regards the mere question of getting the work of purchasing done promptly, my impression was that the witnesses have all agreed that there was no delay?—With great respect, I do not think that affects the case. All I used to complain of as an officer of the Supply Department was that the delay did take place; whether it took place for the one reason or over one particular section of the work or another would not affect the case from my standpoint.

1677. Apart from the question of selecting the tender, do you think that the work of placing the contracts after requisitions received could have been done more quickly in the Supply Department than in the Contract Department?—I think it could be done quite as quickly, but that is a purely clerical arrangement;

that is a matter of being expeditious or slack in the discharge of certain clerical duty.

1678. Your complaint then mainly turns on the question of which tender should be accepted, and discussions arising about the tenders?—I have gone rather fully into it, I wish to be very careful in this matter, and I think I should have to give some of my evidence over again. I have already endeavoured to explain that where the delay and where the duplication arises, in my opinion, is this: that the technical knowledge which is requisite for a satisfactory selection of firms is to be found rather in the Supply and Manufacturing Departments than in the Contract Department.

1679. I said apart from the selection of firms?—I do not think that the question is in any way raised that there was delay in the actual clerical work in the Director of Contracts' office, I certainly never raised it. There may be delay from great pressure of work, but it is an accidental delay.

1680. Supposing the Director of Contracts were obliged to accept the tender recommended by the Supply Department, would you then see any advantage in transferring the duties?—Yes, because I do not see the good of keeping him, he would have no independence at all, and he would be merely a fifth wheel in the coach.

1681. You are aware of all the inquiries which have been made into this question, and the unanimity of the reports of all the Committees in favour of maintaining the Contract Department as securing a certain financial review, are you not?—Yes.

1682. You are aware, I suppose, that in most large business concerns the actual purchasing is done by a general buyer?—Yes; you can hardly compare the two things, can you? Take a large railway for instance: the chief engineer at Crewe places his own contracts, does he not?

1683. No, it is exactly the same as in the Government service; the Technical Department requisitions; the storekeeper, as he is called in our case, buys everything, but he is of course influenced by and, one may say, governed by the Technical Department; the actual buying is done by a buying officer just like the Director of Contracts?—But, for instance, would not the London and North-Western Railway's Chief Engineer almost refuse to accept steel which was not steel of the quality and character, or bought from a particular firm which he thought could alone furnish that quality and character; would not his opinion almost be law in the matter?

1684. That is the point I am putting to you, whether if the Technical Department's recommendation could not be over-riden by the Director of Contracts, without, we will say, the express authority of the Financial Secretary, that would not entirely satisfy the object of your proposal, and still maintain the check which has been recommended by so many Committees as valuable, of having an independent officer under whose eyes the contracts are made?—I think it would very greatly modify my objection to the present system. Of course the matter is one which has been dealt with by men with far greater knowledge than myself, and I am aware that there is a very strong opinion in many quarters that it would be good to retain the Director of Contracts. I myself confess, from my humble lights, that, if the Director of Contracts is to buy without having any voice whatever in the question of who he is to buy from, or what he is to buy, I do not see the use of keeping him.

The witness withdrew.

1685. I am putting it that he must not over-ride the recommendation of any department without inquiry?—Then you would have your delay, and I will tell you why. The difference is this: In all commercial and industrial undertakings you are dealing with trade articles and if the worst comes to the worst, if you cannot get exactly what you want, you get the next thing which will answer at a pinch; but in dealing with warlike stores you are absolutely powerless if you do not get the right stuff at the right moment, and I think if any delay which exists or may exist under any system can be done away with, then that delay should be done away with even at the cost of altering the system.

1686. You want the Director of Contracts to be in the position of registrar and critic?—Yes.

1687. In your memorandum you say he is now in that position with regard to a considerable amount of his work?—Yes.

1688. Have you any objection to his being left in that position providing that the recommendations of the Technical Department are treated with more respect?—No, I am not satisfied that that would be a good plan. I think the only way in which you can get military stores satisfactorily is to have as little delay as possible between the man who is answerable for the provision of those stores and the contractor who has to make them. I think that any system by which you have yet another officer, with the opportunity of a discussion arising between them, is a source of delay and consequently of danger.

1689. I see you say, "In some cases with regard to "machinery he cannot even determine which is the "lowest tender"?—I do not think he can without going to the technical people who know all about it. I have spoken about something which is not well within my knowledge, but I think that is so.

1690. Is not that entirely a matter of specification?—I should think not entirely. You may take your specification, say, for an engine, but in reason let me appeal to you. Imagine me Director of Contracts; now what on earth do I know about an engine?

1691. He is bound to buy the engine specified, is he not?—I know he is.

1692. If the kind of engine specified is an engine costly in use but cheap in first cost, that must be the fault of the inspecting officer who has specified the wrong article, and not the fault of the Director of Contracts?—The Director of Contracts is dealing with a subject in regard to which he can possess no technical knowledge.

1693. He disclaims knowledge; he says: "I am "buying what I am requisitioned to buy." I understand you to say you visited Crewe personally?—Yes, and other places.

1694. And that you had to pay your own expenses?—I think, if I recollect rightly, I always used to do it when I was on leave. I should have had no difficulty in getting the money. What I meant to indicate by it was that it was not a recognised part of my duty.

1695. I wanted to make the point clear?—I am glad you have given me the opportunity of correcting a wrong impression. I had absolute freedom with regard to that matter, and I merely mentioned, as a fact, that I had usually paid the expenses of those visits out of my own pocket.

Mr. G. D. A.
F. Wilson,
C.B.

16 Jan. 1901.

FIFTH DAY'S MEETING.

FOURTH DAY'S EVIDENCE.

At the War Office.

Thursday, 17th January 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Mr. A. Major.

Mr. ALFRED MAJOR further examined.

17 Jan. 1901.

1696. (*Chairman*.) We are proposing when we have finished taking further evidence on this question of contracts to communicate the whole evidence to you, as a good deal has been said about your department, and then to ask you, when you have had time to study that evidence, kindly to come back and give us some explanations on the whole?—Yes.

1697. This morning we have asked you to come because Sir George Clarke wishes to put a few interim questions to you in explanation of the evidence you have already given—not for you to reply on the whole question?—Yes.

1698. (*Sir George Clarke*.) In the statement you furnished to us you say that there have been, in the year 1900-1, 42,285 tenders received in the office for consideration, and 36,000 letters, and 199,000 papers. That would mean more than 140 tenders for consideration per working day, and in addition more than 120 letters; if you take a working day at five hours, allowing for the very many other things that you have to attend to, interviewing the contractors and studying the market prices, that would only give about two minutes per day for a letter and a tender consideration. Might I take it therefore from you that a large number of these tenders do not come under your personal consideration?—A large number of the tenders would not come under my personal consideration.

1699. And therefore they would be practically decided in your sections?—That is in consequence of the enormous volume of work which makes it absolutely indispensable at the present time.

1700. The Director-General of Ordnance stated in his evidence that you objected to members of his branch visiting works to ascertain how the progress of orders was proceeding; but we understand that his officers live actually on the spot in some cases, and are always in and out of those works; would you say why in this case you object to his action in inspecting the progress of the work?—It is not my objection; it is the Secretary of State's objection.

1701. At Question No. 181 you said that when Mr. Powell Williams came to the War Office with a knowledge of Birmingham matters he said that you were the laughing stock of the Midlands because you paid 3*l.* or 4*l.* a ton more than the proper price of copper, and you said that since that time you had made different arrangements. If it had not happened that Mr. Powell Williams came to the War Office with that special knowledge, would the system have discovered that important fact?—Certainly.

1702. But during the 40 years in which that system lasted that excess price paid for copper was not discovered?—I do not say an excess price was paid for copper on all occasions during that period. We were

distinctly aware in the Contract Branch that the system of buying metals through brokers was an expensive and an extravagant one, and had it not been for the promise that had been made by my predecessors to a firm who had done that work for a considerable number of years, I should have changed it directly I became Director of Contracts. In fact, we were waiting to change it on the death of the senior member of the firm, an old gentleman who happened to live to an exceptional age.

1703. Then under the system the department was practically tied to a contractor for a period of years, and until a death of one of the firm it was impossible to change the arrangement?—I do not say it was impossible, but it was a promise that had been made to this firm, to the senior member of the firm, which it was rather difficult for me to disregard, and which, of course, as in the ordinary course of affairs it would not last much longer it was not necessary for me to change before I did, at least, before the death of that particular gentleman.

1704. But you were quite aware from the time that you entered upon office that the price paid for copper was excessive?—I knew, from the information that I gleaned, that the competition for those orders for copper was not quite so free and open as it should be. Of course, you learn these things from communications with the trade. There were several complaints made to me—and it is rather natural to suppose so—that a certain amount of preference was shown to certain people by the brokers, which in my opinion made it desirable to alter the system.

1705. You spoke, I think, of the difficulties in buying such articles as copper at a village 30 miles from London?—I said 30 miles from London so far as convenience of access was concerned.

1706. The village has 120,000 inhabitants, and of course there are telegraph and telephone communications. I could not, therefore, quite understand your answer; do the contractors wait in your office watching prices before you settle, or do you watch prices before agreeing to their tenders?—In regard to a thing like copper, in which there is considerable variation daily and hourly in the prices, the firms will bring me offers for copper in the morning and expect to receive an answer in the space of a few hours—an hour or two. In fact, it has always been the practice, only I thought it was an objectionable one to continue, to bring the offer up by hand, and to have it settled before the gentleman who brings it goes out of the office. It seemed to me that that was rather rushing things, and I declined to do it in that way. I always think that these things want a little explanation, and therefore I arranged that the tenders should come on to me at 12 o'clock as usual, and I would undertake to give an answer as rapidly as

possible—certainly before that day was out and before the market was closed.

1707. I do not quite understand it still, because it is a question in copper, is it not, of tenders, and therefore you would be influenced by the rate on the tender rather than by your own observation of how the price of copper was fluctuating?—The rate on the tender would be the rate at which a man could supply at the market price at the moment at which the tender was sent in, and, therefore, inasmuch as variations of a pound a ton may occur perhaps in a very few hours, in copper, it was very necessary that he should know with the utmost expedition whether his tender was accepted or not.

1708. In that case is he a broker going into the market to buy or is he a holder of copper?—He may be both, either one or the other; in the majority of cases, probably merchants, but still brokers undoubtedly, too, as well.

1709. But you said, I think, that you had done all that you could to abolish dealing with brokers in metals?—That is so.

1710. Then would there be any great difficulty in settling such a tender, say, at Woolwich, with the facilities which the telegraph and telephone offer?—I do not think it could be settled with the same facility. It is not an insuperable difficulty, but I do not think it would be settled so conveniently as it would be at headquarters.

1711. I think you told us that in case of any special stores you would ascertain whether the tender came from a middleman or not. What steps do you take to ascertain whether the man is actually capable of making the thing or not?—We ask them to state where their factory is. We know all cases in which people manufacture their stores or purport to be manufacturers so far as the custom is with regard to the particular store.

1712. Take a special case, steel balls are an article of very special difficulty in manufacture. A large order was sent to a firm which order proved very unsatisfactory. Did you ascertain whether the firm manufactured balls?—I could not answer that question off-hand without looking at the papers.

1713. Do you know that this firm are agents for firms which you employ, and that a firm which tendered at the same time as this firm, and for 8s. a 100 less, stated that the latter had purchased balls from them?—Without looking at the papers I could not possibly say.

1714. In the case of timber contracts, are you aware that the particulars given on the tenders as regards shipping ports, and so on, sometimes show that the tenderers are offering the same batch of timber at different prices?—It is very possible.

1715. In such cases as that would it not be natural to assume that you were dealing with middlemen and not with the holder of the timber?—In regard to timber it is quite possible that a man may make an offer of timber over which he has control.

1716. As a matter of fact it does happen constantly that the same timber is offered by different people at different prices?—And we choose the cheapest for the same timber. That is the advantage of competition.

1717. I think you said that you would take the opinion of the superintendent before buying any special stores. Are you aware that that rule is not invariably followed by any means, and that in certain cases, without any rule which I have been able to discover, we get the power of saying a word upon a tender for a special store, and in other cases we never hear anything about it until the order is made?—I should like to know the things specifically, please, in which that occurs, if it is a special store, and if we do not follow the recommendation that is made by the Superintendent or the Chief Superintendent of Ordnance Factories—

1718. I have got a long correspondence here, that I need not trouble you with, in which your department pressed for what was really a fourth trial of a firm which offered manganese bronze. You would not, I suppose, know what that bronze was required for?—No.

1719. And you would not perhaps realise that all those trials cost money to my department?—We are perfectly well aware of that.

1720. I mean that we cannot make a trial without expending public money?—Certainly, we know that perfectly well; but we have trials made for the purpose of securing competition. Mr. A. Major.
17 Jan. 1901.

1721. This bronze was required for a rather complicated and costly class of vessels which have to contain air at a very high pressure, on which the entire efficiency of large artillery mountings depends. If I took a bronze which proved a failure afterwards and cast even one of these things I should waste a large sum of money. Do you not admit, therefore, that I am bound to be exceedingly careful what I accept in such cases?—Certainly.

1722. Then what I do not see is why your department should press me to make a fourth trial of a man who had really had a fine chance of showing that he could do a thing and had failed?—Obviously the object in asking for a fourth trial, and endeavouring to get the man into a position to compete for manganese bronze, is solely and entirely to prevent the firm from whom you get the manganese bronze from being able to ask exactly what price they would like. We do not ask you to take the manganese bronze produced by another firm until you have perfectly satisfied your mind that that manganese bronze is satisfactory.

1723. But there must surely be a limit in the amount of trials that you can give to an individual contractor, because it becomes expensive?—There is a limit.

1724. Would you not think that three trials would approximate to that limit?—Without seeing these particular papers, of course, I cannot say off-hand from memory exactly why the fourth trial was wished for upon our part, but it was solely and wholly with a view of getting competition for manganese bronze.

1725. (Mr. Gibb.) Could you tell us what time elapsed between the third and fourth trial in that case?—I could not tell without looking at the papers.

1726. It may be important to see whether there was any change of circumstances between the third and fourth trials?—Quite so. I should require to read the papers to see whether there was any change of circumstances.

1727. (Sir George Clarke.) Do you remember a case when the Financial Secretary pressed upon the Ordnance Factories a purchase of inferior class of spelter on which he afterwards discovered that he had been misinformed?—He may have done so.

1728. I think you spoke of returns that you receive of rejections and delays. Are you aware that no such returns are rendered regularly by the Arsenal?—I am aware of that. We get them in regard to some items of stores—not in regard to all.

1729. There is no general return from the Arsenal of the delays and rejections in the course of the year?—It is incumbent upon the Ordnance Factories in regard to any delay that takes place in the delivery of a particular order for materials to report it to me.

1730. Of course you would not be aware of the number of communications which go from the Arsenal direct to the contractors. In a single year, for example, more than 4,000 communications referring to complaints of delays and rejections would go from the Arsenal. You would not be aware of that, of course?—Not unless they were reported to me. We go on the principle, which is a very proper one I think, with regard to dealing with contracts, that after having made the contract the question with regard to the delivery of the contract is left with the department requiring the supplies. It frequently happens, of course, that a special date may be given for delivery, but there may be questions of urgency crop up in the meantime which may necessitate their asking the contractor to deliver even before the period at which he has promised to deliver, and that part of the procedure is left entirely to the factories. It is only when the delay becomes of a very serious character, and it is proposed to penalise the contractor, or that the question of buying in default crops up in another direction, that it is necessary to refer to the Contract Branch.

1731. There is one other point that I wish to ask you about. When you add names to the names which I suggest to you for a particular contract, and they come back to me as they do in some cases, but not in all, for an opinion, I am placed in this great difficulty; I may know that in the case of a name you put on the added list of tenderers that firm cannot do the work which is

Mr. A. Major.

17 Jan. 1901.

required, but I have not got sufficient legal evidence to justify me in putting that on paper, and, therefore, I shrink from doing so; whereas if I had the power of sending a man to the works I should know the next day whether I could approve or not. It works out in this way, that I cannot in such cases object, and therefore I have to agree, and I frequently do agree, to tenders being placed with people who I have private information cannot possibly carry them out. Do you not see that there is a little difficulty on my part in that case?—I do not think so. All you have to say is that you are not satisfied with receiving your supply from that particular firm. We do not press it.

1732. That would not be quite the point. If I had experience that I could quote to show that the contractor had been unsatisfactory I should, of course, say so at once; and I am sure you would agree with me. But the point is, I have private information with regard to a firm that I know perfectly well cannot do the thing that they are tendering for; and I do not like to put in on paper that this firm cannot do it because I cannot verify it, and therefore I have to accept firms that I know cannot do the work?—I think that is entirely within your own control.

1733. But I have not the power, have I, of sending a man to ascertain whether the work can be done or not?—At this present moment, as you are perfectly well aware, the question has not been very long since before the Secretary of State. He does not consider it desirable that visits should be paid to contractors' premises without consulting the Contract Branch. You send an inspector before whom their supplies may come in the ordinary course after delivery, and it is considered undesirable in the interests of purity of administration that the inspector should be brought into contact with the supplies. It is purely and only the decision of the Secretary of State, not mine.

1734. Of course, as you are aware, the inspector, in regard to such a very important thing as gun steel, actually lives on the premises with the contractor, and that is a vital thing in the case of gun steel?—That is so.

1735. He actually lives and passes the thing for the Service on the premises, and, therefore, surely there cannot be a very great evil, if there is any doubt as to the capability of a firm, if I were allowed to send a man who could tell me in a moment whether they could do it or not.

(Chairman.) I think that is rather a question of policy for the Secretary of State.

1736. (Sir George Clarke.) I rather gather that you do not quite realise what it means to a manufacturer who is under promises which he is urged to keep, and abused if he does not keep, to be kept waiting, as happened to me for three years and one month, for the supply of 250 springs, which were ultimately made by the firm whom I originally recommended. Do you quite realise what great difficulties it places the manufacturer in?—Of course, I realise that. Without knowing the case I cannot give any opinion upon how far the action of the Contract Branch has conduced to that state of affairs.

1737. Surely?—I must have any cases of that kind before me that you have in your mind in order to give this Committee any satisfactory notion or satisfactory opinion as regards how far the action of the Contract Branch conduced to anything of that kind. I really must have the cases, please.

1738. You have spoken of economies made by your branch in supplies, and I am quite sure that your branch has always tried to make economies. You would not be aware, would you, of the economies effected by superintendents; that would not come before you?—In what way do you mean?

1739. To take a case in point. At my request you have purchased lately teak scantling instead of teak logs; the result will be that I shall save more than 6,000l.; you would not be aware, of course, of the effect of that dealing?—That is entirely your business.

1740. You would not know that?—Unless we were told we should not know that.

1741. One last question. You would I think admit, would you not, that we manufacturers have the very strongest motive for securing economy?—You ought to have.

1742. (Sir Charles Welby.) I think I understood you to say just now, in reply to Sir George Clarke, that

the objection which was taken to the Director-General of Ordnance sending persons to inspect contractors in the course of their execution of the contract, was not your objection but the Secretary of State's objection. Would you not modify that in any way?—Oh, no. The Secretary of State decided that these visits to contractors should not take place without the concurrence of the Contract Branch.

1743. In this particular case to which you refer?—Which case do you mean?

1744. In the particular case which you are referring to; the Secretary of State gave his decision in the particular case?—As a general principle.

1745. Is it not the fact that his decision was to this effect: though it was perfectly true as matters then stood that the responsibility for keeping an eye on contractors rested primarily with the Contract Branch, yet did he not lay it down that in future such inspections, where necessary, should be conducted by an official of your branch and an official of the Director-General of Ordnance branch acting jointly?—Quite so, when it was necessary. That is what I mean by saying with the concurrence of the Contract Branch.

1746. Therefore, he did not lay it down absolutely without qualification that it rested entirely with you, and that the Director-General of Ordnance, the requisitioning authority, had no voice in the matter?—I see your point—that is so.

1747. (Chairman.) I think when you come before us again you will be able to answer fully and clear up this matter; but I understood you to say that for a considerable period of years you had gone on getting copper at a high price from a certain firm because some kind of a pledge had been entered into with them that they should supply previous to your becoming Director-General?—Until the demise of the senior member of the firm.

1748. Perhaps you will not have all the facts in your memory now, but when you come back I think it will be of advantage if you can tell us when and under whose authority that pledge was made, and if it was conditional, and so on; because it looks as if a public department had bound itself practically to a single firm at a certain price, quite cutting off all possibility of competition and lower prices?—Pardon me, there was competition always entered into by the brokers, but the point that came under my observation, and I have no doubt it was known, was this; Sir Evan Nepean was the responsible person for making the promise, and it was continued and respected by my predecessor, Sir George Lawson, and inasmuch as the thing was only likely to last for a very short time, as a matter of fact it did only last for about a year after I became Director of Contracts—

1749. But it had been lasting for some years previous to that?—Yes, it was a principle in the Contract Branch to a certain extent to buy these things through brokers.

1750. (Mr. Gibb.) The firm in question, to whom the promise was given, was a firm of brokers?—Yes.

1751. And did you know that the price you were paying for the copper, when the matter came into your hands, was higher than the market price?—No, it never was higher than the market price; we always check the market price.

1752. But the point in the evidence is that you were paying 3l. to 4l. a ton above the price obtainable on the market?—We found afterwards by having this competition, that we sometimes bought copper considerably below the market price quotation.

1753. But the selling price of copper is a known figure from time to time?—Certainly.

1754. Did you know before Mr. Powell Williams called your attention to it, that the price you were paying to this firm was 3l. or 4l. per ton above what I will call the market price?—Certainly not, we did not know that. Mr. Powell Williams of course is responsible for the statement that we were paying 3l. or 4l. per ton more than we ought; I was not cognisant of it to that extent. I do not believe it was anything like so much; there might have been isolated cases perhaps where we paid a little more than the market price. But our check upon it was this—that we never paid more than the market price quoted, but when we went to competition for copper, we found we paid below the market price quoted. That is to say the market price

quotations go from such a price to such a price, and there is a considerable margin, and inasmuch as we took the copper off the market absolutely for consumption people were glad to sell us copper at prices which were really below the market quotations.

1755. There was no promise was there to the broker's firm that they should receive more than the market price?—No, never.

1756. (*Chairman.*) I think we have cleared this up, it comes to this; that you were tied to one particular broker in virtue of an engagement entered into by somebody before you took office, and that the only check upon this broker was that you compared the price he quoted with the market quotation?—That was so.

1757. Now, as a matter of fact (I do not know whether it pertains to copper, but it does to many other articles), the quotation is one thing but the price at which you can actually buy or sell is another?—It is so.

1758. (*Mr. Mather.*) A difference of 3*l.* or 4*l.* a ton in buying copper seems to me so extraordinary that I cannot conceive how those figures can have been used, except as a figure of speech. The evidence you have given now I think would be misleading to anyone reading it afterwards, if you did not prepare a statement as to the real facts discovered when you came to investigate the facts of this case. You will find probably that the discrepancy between the best market price that you could have bought at and the price the brokers delivered the copper for did not show a difference of anything like 3*l.* or 4*l.* a ton?—No doubt.

1759. (*Chairman.*) When you come back I should be very glad if you could clear up this question and let us know upon what authority this engagement was made?—I told you it was made under the engagement of Sir Evan Nepean.

The witness withdrew.

Mr. WILLIAM CODRINGTON BRIGGS HALL examined.

1767. (*Chairman.*) You are, I understand, Assistant Director of Navy Contracts?—Yes.

1768. How long have you been so?—A little over three years.

1769. And you have been in the Navy Contracts Department for some time?—A very long time.

1770. Practically, has all your service been in it?—All except three years in the Transport Department. I joined the old Contract Department in 1865, and it was reconstituted in 1869 and 1870.

1771. Then, naturally, you are familiar with the history of the department for some time back?—Yes.

1772. Will you correct me, if I am not right, in stating that up to 1869 there were six Principal Officers at the Admiralty, who each bought stores under the superintendence of a particular lord?—That is so.

1773. And in that year the system was centralised, and a Superintendent of Contracts was appointed under the First Secretary, who has now become the Financial Secretary?—Yes, the Parliamentary Secretary.

1774. And the Superintendent of Contracts, as he was then termed, is now called the Director of Navy Contracts?—Yes.

1775. And the Director of Navy Contracts would now buy on requisitions from all the various supplying departments, with the exception of ships and engines which are bought by the Controller of the Navy, and works, in which case the orders are given by the Director of Works?—That is so.

1776. Those are two excepted departments?—Yes.

1777. Otherwise he would buy for all departments?—Yes.

1778. We have a memorandum here of "Instructions for the Director of Navy Contracts," which, I think, will avoid the necessity of our troubling you with very many questions, as it is very full, but I should like to ask you for short explanations on one or two points. Paragraph 4 in the Instructions says, "To ensure the supply of articles of satisfactory quality, care must be taken to obtain them only from persons or firms of repute (not, however, excluding resort to persons and firms in a small way of business in suitable cases), and for this purpose the system of limited

1760. Under the authority of the Secretary of State?—Acting under the authority of the Secretary of State.

1761. (*Mr. Beckett.*) What *quid pro quo* was given, may I ask, for this promise to deal exclusively with this firm of brokers; what *quid pro quo* did they give for this privilege?—Only that they had been buying for such a long time, and when I was asked to renew the pledge to another firm I distinctly declined to do so in the interests of the Service.

1762. (*Sir Charles Welby.*) When you said just now that this arrangement which was made by Sir Evan Nepean with this firm of brokers was made, I think you said, under the authority of the Secretary of State, you did not mean to convey to us that the Secretary of State necessarily had any cognizance of such an arrangement?—No.

1763. (*Chairman.*) In regard to this question of copper, would you give us some statement, as clear and intelligible as you can make it, showing, so far as you can state it, what the result was of this change of system, so as to give us some measure of the economy effected by your change of system?—It is very difficult to do that.

1764. Well, you can think over it?—I will see if I can do it. We estimated that in buying copper under the new proceeding we saved from 1*l.* to 2*l.* a ton by the arrangement—that we saved 4,000*l.* or 5,000*l.* a year; but I do not say, of course, that that 4,000*l.* or 5,000*l.* went into the pockets of the brokers in any way.

1765. (*Mr. Mather.*) Moreover, copper varies so much from month to month that you may sometimes buy through a broker much cheaper than you can in the open market?—You may.

1766. There is no hard-and-fast rule for it?—No.

"tenders should be encouraged in preference to general invitations by advertisements. In such case, other matters being equal, the principle of accepting the lowest offer should prevail," that is to say, that with regard to each particular class of articles, you have a list of contractors from whom you invite tenders?—Yes.

1779. And that, as a general rule, you would accept the lowest tender from a person on that limited list?—Yes, almost invariably on the limited list, because we put on one level all those on the list; there may, of course, be exceptions noted against them, that some are only to be taken for small orders, or some other restriction of that nature.

1780. But I have heard of a similar list, in which you would have put against contractors for a certain article, "These men are good for orders of 20,000*l.*," "These men are good for orders of 5,000*l.*" and so on, according to their capacity?—Yes, practically we act in that way.

1781. And when we speak of accepting the lowest tender, I suppose in the lowest tender the element of time always enters into the consideration?—Yes, we have to take that into consideration, also whether we know they are likely to carry out their promises as to time. Some have failed in time before, and then that would be considered of course.

1782. But do you not remove a man from the list when he has failed?—If it is a bad failure we should, but these limited lists are nearly all select firms.

1783. But if you wanted an article at all urgently, and the question of time was important, although the price was rather higher, you might give it to a man who you were quite sure would be punctual?—Yes, it is occasionally done.

1784. Are these lists of contractors often revised?—They are continually being revised. People apply daily. We have a system of noting whether they tender when they are invited to; and when they are put on the list, we tell them that if they do not tender for three consecutive years, they will probably be taken off again; the list is weeded out in that way. Some people apply and get on the list, and apparently are satisfied with getting on and do not tender; or, perhaps, when asked are so full of business that they do not tender.

Mr. A. Major.
17 Jan. 1901.

Mr. W. C. B.
Hall.
17 Jan. 1901

Mr. W. C. B.
Hall.
17 Jan. 1901.

1785. That is to say, a man might attempt to get on to your list to give himself prestige or standing, although he has no real intention of tendering for the Government at close prices?—I think that is done occasionally; then we take them off when they do not tender.

1786. Then you meet that by taking the man off unless he has actually made tenders in three years?—Yes.

1787. Is that done from time to time?—It is done annually now. We invite them to tender; when we find they have not tendered for three or four years, we send them a form with the invitation asking if they really wish to stay on, and then, if they do not tender, we do not keep them on.

1788. If they say they wish you to keep them on?—Then it is a matter for consideration whether they should stay on or not. The object of some in applying is to be qualified to supply shipbuilding contractors in their own neighbourhood.

1789. Who puts a man on the list. Who are they recommended by?—Generally on their own application. Then we get references, if they say they have done business with the War Office we inquire of the War Office; if they give us the names of large shipbuilders and people of that sort, we inquire of them. We are perpetually inquiring about people from bankers and others.

1790. Who makes those inquiries?—The Director of Contracts, both for his own business and the Controller's, as to financial condition of firms.

1791. To continue that paragraph 4 of the Instructions, it proceeds: "As regards Machinery and Special Articles, he is to confer with the head of the department concerned as to the firms to be invited to tender." Is that done?—Yes, that is frequently done. In the case of large shipbuilding materials, for instance, we agree the list of firms to be invited with the Director of Naval Construction. Probably his officers would have inspected the works and reported on them, before the firms were put on the list, or have previous experience of them.

1792. But as regards less technical articles, you would not confer with the head of the Supply Department?—No, there would be no occasion; it would only be bothering them unnecessarily and losing time.

1793. When he put forward a requisition, would he sometimes put forward a recommendation that the orders should be given to such and such firms?—Yes, they do recommend firms sometimes.

1794. And if you do not accept that recommendation do you confer with the department?—Yes, we should as a rule.

1795. If you varied from the recommendation?—Sometimes we know they are mere repetitions of what the dockyard put on the demand, and they very often put on the name of the people who did the work before. If we know that, we do not trouble about it, we ask people on the list.

1796. As a rule you would be inclined to try if possible to deal with the firm recommended?—Yes, the firm recommended is mostly one that we know, but only one of them.

1797. In paragraph 10, on page 2, it is stated that "In regard to tenders received for special articles, or for supplies, as regards the nature or quality of which he may desire advice or information, or as to which the head of the department concerned has expressed a wish to be consulted, he is, before submitting a tender for acceptance, to obtain the opinion of the head of such department"?—Yes, that is regularly done with big things, or anything out of the way.

1798. But whatever the article is, if the head of the department has expressed a wish to be consulted, he would be consulted?—Yes.

1799. It is always open to him to express that wish?—Yes, he does occasionally; generally for the purpose of ascertaining his liability before the order is given.

1800. Under paragraph 15 it is stated: "The Director of Navy Contracts has no responsibility for the examination of stores, but it being necessary for the proper performance of his duties that he should be generally acquainted with the character of goods supplied by contractors, he will be furnished by the examining officers with such information and reports upon their quality as he may from time to time

"desire." Does that mean that during the execution of an order you have means of sending down and watching its progress?—We have no means of sending down. It would, perhaps, be better if we had. We, however, get monthly returns of rejections and annual returns showing how contracts have been executed. We could inquire also if we wanted to.

1801. What arrangement would you employ in making that inquiry?—We should write to the dockyard, or whatever the establishment was, and ask them how the contractor was getting on, if we had any particular reason for wanting to know.

1802. And they would send down an examining officer?—No, they are there on the spot; the examining officers belong to the dockyards or victualling yards.

1803. But would the officer who would examine the progress of the order be the same officer who afterwards had to inspect the articles and decide whether they should be accepted or rejected?—We should inquire of them through the Admiral Superintendent. I think you must mean sending to people at the works?

1804. Yes?—We have overseers at the important works for things like armour plates and ship plates.

1805. Are those overseers under you?—No, they are agents of the Using Department, but make returns of progress to us which we pass on to the Using Department. If any action is necessary, we take it on these returns in consultation with the Using Department.

1806. Are they the same officers who afterwards may have to inspect and decide whether the goods should be received or not?—They inspect during construction. Some goods are passed on their inspection; other goods are liable to be examined again before being accepted at the yards.

1807. But might the officer who has examined the work in progress of construction be afterwards detailed for receiving and examining the goods when delivered, so that he might possibly find himself in the position of having to decide upon the acceptance or rejection of articles supplied by works on which at one time or other he would have lived to watch the progress of the order?—The only chance of that would be if the officer who was at the works, say, last year had been promoted to constructor, or to some other post at the dockyard at which they were to be delivered. That might happen, but it is not likely as a rule. It would be quite exceptional if it did happen.

1808. Under paragraph 19, I see that the Director of Navy Contracts "is to keep himself well informed of, and call the attention of heads of departments to improvements and changes in the designs or qualities of the different stores required, and to new inventions, so as to secure to the Service the best and most suitable articles." Is that an important part of his duty?—Yes, a very important part of it.

1809. You are able to do that, not from having any particular technical knowledge, I suppose, of manufactures yourself, but from the experience that you have gathered?—We go down and see the works occasionally, and people point that it would be better to adopt a trade article, than to have something special that will cost a large amount of money to make.

1810. You go down to see?—That is an important part of the Director's duty.

1811. But in order to do that, it is not supposed that the Director should have technical knowledge of any particular trade?—No, gumption is the main thing.

1812. Common sense and experience?—Yes. Of course you hear different accounts from different people as to what should be, and you must weigh them as best you can.

1813. Are you familiar at all with the system in force at the War Office?—No, I am afraid not.

1814. You have no practical knowledge of it?—No, I have never been brought in contact with it.

1815. Are there many complaints as regards delays in the execution of your contracts?—Yes, a good many sometimes. When trade is good, it is very often difficult to get people to deliver; but we took some very drastic measures about a year ago, and they have considerably improved in that respect.

1816. What were those drastic measures?—We struck a lot of people off the list for continuous delay, and declined to consider any appeal until they had been off 12 months.

1817. Did you enforce any other penalties, fines?—We buy in default occasionally when that will hasten the supply.

1818. You do not often inflict fines?—We do not have fines in the Contract Department, except for beef, or a few minor things like that.

1819. You have the remedy of buying in default?—That is the main thing that we rely on as a cure, but the careful selection of the firms is prevention. It is held that penalties raise prices against the Government and deter firms of good standing from entering into business relations with the Department.

1820. When a requisition is put forward to you, does it state in the requisition that such and such articles are wanted by such and such a date, or are they asked for at the earliest possible time?—Dates are very often named; sometimes an impossible one; but the great bulk of our stores are bought under annual requisitions; we know generally when they are wanted, and leave it to the contractors to name their time for delivery in tendering.

1821. That is to say, you confer with the contractors as to the time?—Yes, and the time they name is of course considered with their price. If it were anything outrageous that we could not wait for, we should ask if they could name an earlier date, or pass them over. As a rule we buy a year's stores at once, and the delivery can be spread pretty well over eight or nine months.

1822. But when you have fixed on a date like that with a contractor, does he often fall into arrears with it?—Yes, he does, I am sorry to say. A great deal of our work consisted in keeping contractors up to the mark, but the principal part of that work is now thrown on the receiving departments; we used to do a great deal of it at the Admiralty. That threw the work of eight or nine outlying establishments on the central office. It is better done at the outposts; if there is any failure, they send up to the Director of Stores or the Director of Victualling; they pass the papers on to us, and we commence to worry the contractors ourselves.

1823. It is your business to worry the contractors yourselves on their demand?—Yes, as a last resort.

1824. (*Mr. Beckett.*) In paragraph 11 of these Instructions, it says: "When the ordinary procedure cannot be strictly followed on account of urgency he" (the head of the department that is) "may without previous sanction accept the lowest tender, and decide upon any offers respecting which, in his opinion, immediate action is required;" therefore the ordinary routine can be set aside in times of urgency?—Yes.

1825. Do you find that the heads of departments as a rule are ready to take advantage of that liberty that is given to them, are they ready to act on their own responsibility?—That paragraph applies to the Director of Contracts after he has obtained tenders.

1826. Then the heads of departments, I understand, in times of urgency have no special liberty given to them to accept the lowest tender in their own district?—They have authority to buy up to a certain amount, I think it is 20% at the dockyards.

1827. Only to a small amount?—But they do give orders occasionally in cases of emergency, and ask us to back them. Supposing a ship in dock wants some composition they telegraph to the maker for it, and ask us to confirm the order, which we do as a rule.

1828. Do you consider that any system which gave full permission to heads of departments to make their own contracts would be as satisfactory as the present one?—No. They would compete together, and so split up orders that no manufacturer would accept them.

1829. To prevent that competition, it is better you think that all tenders should come to the Director of Contracts?—I think so, certainly. Otherwise the advantage of buying wholesale would be lost.

1830. (*Mr. Mather.*) That is assuming that all their requirements are of the same character?—Yes, and of course they mostly would be to identical patterns.

Decentralisation may be a very desirable thing, but in the case of manufactured articles made to identical patterns, it should take place after the goods have been purchased. This lesson has been strongly impressed on my mind by my experience at the Admiralty. We have six Dockyards, each provided with a carefully selected pattern and a specification, yet it is a con-

stantly recurring complaint from manufacturers, that one receives and another rejects, goods made at the same time, by the same men, from the same lot of material, in the same looms or with the same tools.

If this occurs under a single contract held by the actual manufacturer, what varieties are likely to creep in under eight or nine different contracts placed with middlemen, who may not be in touch with the actual manufacturer? It is frequently argued that middlemen may sometimes be able to supply more cheaply than a manufacturer, and this may occasionally be true if job lots are required, but it can hardly ever be true of things required to pattern and specification. Admiralty contracts are nearly all limited to manufacturers, and the necessity for identical examination is fully recognised, though difficult of attainment. It is secured, however, in some cases, by having the supplies for all yards delivered at a single one, or by sending samples of deliveries at all yards to a single one for examination; and, in others, by examination at the works or at the port of shipment.

1831. (*Mr. Beckett.*) I see the Instruction says, in paragraph 19a that the Director of Contracts "is to keep himself well informed of, and call the attention of, heads of departments to improvements and changes, &c." Do the manufacturers call his attention to any changes that have been made?—Yes, they growl sometimes at old fashioned patterns; they say, "This is made in an antiquated way, cannot you alter it"?

1832. I suppose a good deal depends upon the Director of Contracts himself. If he is not an active enterprising man, a great many changes and alterations may be made, of which he would have no cognisance at all?—Made by whom?

1833. In the trade?—Yes, certainly. The Director or his Assistant should be able to spend about a third of his time in this way.

1834. As you say, unless he has gumption?—Yes, and goes about among manufacturers and talks with them. He has various opportunities of interviewing them; they come up to the office frequently, and if you encourage them to talk you get a lot of information; but of course it takes time.

1835. But in order to work the system as efficiently and economically as possible, it is evident under this paragraph that a great deal depends upon the personal ability of the selected officer?—Yes, that is so in most cases; a great deal depends on the individual.

1836. Then again paragraph 21 says: "To ensure that the specifications, &c. are correct, he is to consult the head of the department concerned, whenever it is proposed to renew a contract of importance, as to whether any alterations are desired"?—Yes.

1837. In the case of the head of the department concerned recommending a certain firm, would the Director of Navy Contracts be ready to accept that recommendation as a rule?—I think so. We should inquire as to standing and so on if we did not know it already, but generally the firm recommended is one we do know.

1838. (*Sir Charles Welby.*) I think you told us just now that in regard to certain special kinds of stores there was a system under which the Supply Department kept watch over the contractor's proceedings, or that they had local officers who superintended it?—Yes, and those officers send periodical returns, showing the state of the work, which come first to the Contract Department.

1839. Is there anything analogous to that in regard to general stores?—No, only the special.

1840. What are we to understand by special kinds of stores; could you give a rough description?—Armour plates, chain cables, ship plates, and many other things that are tested at the works.

1841. Then in regard to any other than the special stores, is there any machinery for keeping contractors up to the mark, and ascertaining during the execution of the contract that they are busily employed on the contract, and not setting it aside?—I am afraid there is not. We are open to improvement in that direction.

1842. You regard that as a weak point in the system?—Yes. The Yard will hasten them if they do not keep their time.

1843. That is, the Requisitioning Department?—Yes, the establishment that has to be supplied, the consignee of the goods.

Mr. W. C. B. Hall.

17 Jan. 1901.

Mr. W. C. B.
Hall.
17 Jan. 1901.

1844. They will hasten them by writing to them?—Yes; they have a form and a regular system by which to do it; and if they do not produce any effect upon them, they come to us to help them.

1845. What means have the Yard of finding out whether the contract is being properly executed or not; how do they ascertain delays?—Only by the fact that they have not got the things delivered.

1846. That is not until the delay has actually occurred?—No, but it is allowable to hasten stores urgently wanted before the due date.

1847. But is there no machinery for ascertaining delays in the course of the execution of contracts?—Only in the case of armour plates, and things of that sort, made under inspection.

1848. Supposing that it is desirable to institute some method of watching over contractors' proceedings, would the responsibility for that under your system rest with the Director of Contracts, or with the Requisitioning Department?—It is with the Requisitioning Department now. They have to do what we call the hastening; there is a regular system of hastening continually going on.

1849. So far as it is provided for at all, it is in the Requisitioning Department?—Yes, they call us in if they fail, and then we act.

1850. And you have no responsibility for it till then?—No, but it might be an improvement if we had some means of inspection for preventing the contractors falling in arrear. If you mean a system of inspection to see that the contractors have started work and are keeping at it, that could best be done by a travelling inspector, under the orders of the Director of Contracts.

1851. I think the Director of Navy Contracts is a civilian, is he not?—Yes.

1852. What was his previous experience before he became Director of Navy Contracts?—He was Director of Stores.

1853. And before that?—Before that he was Inspector of Dockyard Accounts.

1854. He has always been an Admiralty official?—Yes.

1855. How did he begin official life, as a clerk in the Admiralty?—Yes, through the Civil Service Commission.

1856. And his whole experience has been inside the Admiralty?—No; he happened to have been detached for some years to Portsmouth Yard, on Indian Transport Service, otherwise in the Admiralty.

1857. I suppose the same is true of yourself; your experience is of the same kind?—Yes.

1858. And, generally speaking, the whole of the Director of Navy Contracts Branch is manned by the ordinary staff of the Admiralty?—Yes.

1859. And do you find in practice that the efficiency of the work of the Contract Branch is affected by the fact that the members of it have not had any technical training, or special technical knowledge?—No, I think not, because we have technical knowledge all round us; if we want to ask a question, we can go to anybody in the Constructive Department, or Medical Department, whichever we are buying for; they are quite close at hand, and we can always go and inquire, if there is anything in a technical way we want to know.

1860. In fact, you find that the only necessary qualification for carrying on the work of your branch is, as you said yourself, gumption?—Yes, combined with experience of the work.

1861. (*Chairman.*) I think I might supplement that by what Mr. Childers said in evidence when the change was made; he stated that the qualifications of the Director of Navy Contracts should be those of an intelligent man of business.

1862. (*Colonel Miles.*) You have nothing to do with the contracts for guns, gun-mounting, yard machinery, &c., they do not come through you?—No, they come under the Controller.

1863. But are the majority of the stores you deal with such stores as those for which specifications are required?—Yes.

1864. Or are they more or less stores in the ordinary way of trade and business?—No, a great many of them have very minute specifications.

1865. A great many are ordinary stores?—Yes.

1866. Then after you make the contract, the heads of departments are responsible for all the duties in regard to hastening the contract, and seeing that it is carried out?—Yes.

1867. It passes out of your responsibility?—It passes away from us unless there is some complaint against the contractor that we have to deal with about delay, a complaint as to rejection, or anything of that sort.

1868. With regard to these stores, you said the Director of Navy Contracts has been in other departments which have dealt with stores; you mentioned the yard at Portsmouth?—Yes.

1869. He would have a considerable technical knowledge of stores, would he not?—Yes, you pick it up in course of time.

1870. In addition to contract knowledge; he would not be a mere clerk, but a man who had been accustomed to large stores?—Yes, accustomed to large transactions. The duties of seniors are more properly described as "administrative" than "merely clerical."

1871. And in addition to the mere clerical duties, there are certain other duties. Do you perform any duties in seeing to the technical nature of the stores; you do not watch them at all while they are being made?—No, they are watched by the officers appointed as overseers, &c., representing the Using Department.

1872. (*Sir George Clarke.*) I take it from your evidence that your branch regards itself as a body established to serve, and to assist, and not to interfere with the using departments?—Yes, we do not interfere with them. They give us specifications and patterns, and we buy to them; they are responsible for the patterns.

1873. You are directed in one of the instructions to confer with heads of departments. I take it that your branch is not in the habit of over-riding wishes strongly expressed of departments?—No, unless it is a considerable financial business, and then of course we should report to the Financial Secretary on it; but anything of that sort seldom occurs.

1874. Then your branch would raise no objection to expert officers from the using departments visiting the works at any time to find out what contractors are doing, or to satisfy themselves that the contractors are capable of performing the contract?—No.

1875. It is their duty?—Yes, with regard to a great many things.

1876. Then, practically, there can be little friction arising between you and the Requisitioning Departments?—Very little. There is a little occasionally. Sometimes we may think they are not dealing quite justly by the contractors, and a little friction might arise over that. We have to keep both sides in good humour—the contractors and the users.

1877. Then, practically I take it that the work goes on smoothly because the departments regard you as their natural helper?—Yes, I think so.

1878. You said, I think, that one of the principal and most important duties of your department is to move about, and keep in general touch with the trade and with the manufacturers?—Yes.

1879. Of course if a store urgently required for the purposes of war were purchased direct by the using department, you would not lodge a complaint to the First Lord?—I do not know. They might interfere with our operations at the same time; that is the awkward part of it. The Yards have authority to make small purchases only.

1880. If there is no question of interfering in any way, but simply doing a thing which is urgently needed for the needs of the Navy at sea?—We should probably propose to give an order in confirmation of theirs to put it in form; but if, in time of emergency, everybody took to buying on their own account there would soon be chaos.

1881. You do not regard your department as special department, more or less directly under the First Lord, and therefore completely independent of the Naval Members of the Board?—We are more particularly under the Financial Secretary. He is really our chief.

1882. And he is, of course, a member of the Board, on terms of equality with it?—Yes, he acts as Financial Lord. Our contracts go to the Superintending Lord of the Using Department as well as to the Financial

Secretary for concurrence and approval, if they are over 100*l.* in value.

1883. (*Mr. Mather.*) I take it from the first paragraph of these instructions to the Director of Navy Contracts, that you buy everything for the construction of ships in the Dockyards?—Yes.

1884. From the iron and steel to all the equipment of a ship?—Yes, everything.

1885. Up to its completion?—Except the machinery. If the machinery were bought whole from a firm of engineers, the Controller would arrange the contract.

1886. But all the smaller equipment, what we should call the auxiliary machinery of the ship, would that pass through your department?—The auxiliary machinery goes with the other if it is bought whole; a great deal of machinery is made in the Yard; then we buy the pieces, castings, and so on for them to work on.

1887. But small machinery for the equipment of a ship?—Dynamos, and engines, and things of that sort do you mean?

1888. I mean smaller machinery, not the large engines, smaller auxiliary apparatus, electrical appliances, for instance, throughout the ship; would that go through your department?—Not the dynamos and engines. All the electric fittings would, such as cables, lamps, switchboards, &c.

1889. The wiring would of course?—The wiring is done by the Dockyard. We buy the wire, and it is put up by dockyard labour.

1890. I understand that there are certain portions of the fittings of a ship building in the Dockyards which you require to have provided from outside manufacturers, which you do not order?—I think we order everything except going machinery.

1891. Except running machinery?—Yes.

1892. But all the stationary plant for the ship you would order?—Yes, building material, steel, timber, valves, and things of that sort.

1893. Things you would buy in the market wholesale, such as valves and cocks?—Yes. They are bought of course from a very select list.

1894. It would appear from the letter of this instruction, and I presume it is the spirit of it—perhaps you will tell us whether it is so—that the heads of departments are continually brought into contact with your department, and have frequent consultations with you, independently of written communications?—Yes.

1895. There is a perfect *entente cordiale*?—Yes; not only with the heads of departments, but all through. If we get a requisition in which we do not understand something, we go immediately over and ask if they can explain it; we get it done verbally, and very likely they will alter the requisition on the spot if it is not quite clear to us. Personal communication is enjoined in the instructions.

1896. The spirit of your department (apart from the letter of the instructions) is to work hand in glove with the heads of departments, whom you recognise always as being, after all, the responsible men eventually to bear the brunt of anything that is done wrong, or to have the credit for anything that is done right?—Yes, they are the users of the goods, they provide us with patterns and specifications, and all we have to do is to buy to them, and get the work done as quickly as we can.

1897. Then as regards this responsibility to which attention is called in the instructions by italics in paragraph 14, "Heads of departments, through their local officers, are primarily responsible for securing fulfilment of contracts and delivery of purchases by the agreed times." That I presume would include for the fulfilment of contracts satisfactorily?—Yes.

1898. In all respects, perfectly, according to the specifications and requirements?—Their people see to that entirely.

1899. So that you appear to be perfectly answering the description given by Mr. Childers; putting your services, the services of your department, in the highest possible sense, you are acting as highly intelligent business men to assist the technical staff at the Admiralty to do their work in the shortest possible time and in the best possible manner; and in that sense you are agents really, acting for them throughout the country?—Yes; and of course we save their technical time.

1900. You enable them to devote their technical time to technical purposes, and you save them all that which is purely business?—Yes.

1901. By applying common sense, and, as I gathered from your expression to other members of the Committee, also your experience, for no high official of your department is appointed without his having had some knowledge of the Dockyard work, more or less?—Yes.

1902. No official is appointed to a high position in the Contract Department without having had some sort of knowledge of the stores required?—The knowledge you pick up in the Contract Department in the course of years.

1903. Whatever that knowledge is has come from experience?—We are always seeing patterns and talking to people about them, and occasionally going over them with specifications.

1904. You have been for some time in connexion with, in the atmosphere, so to speak, of the Dockyards; that is what you have been accustomed to for many years?—Not in the Dockyards.

1905. In connexion with stores in the Dockyards?—No, not actually in the Yards: we have a pattern room in London; we see the things there, we know what they are.

1906. You have been associated, I understand, with the requirements of the Dockyards in the form of stores by seeing them pass through your department?—Yes, we, generally speaking, know all about them.

1907. (*Chairman.*) But, as a rule, anybody occupying your position would be recruited in the same way; he would enter the service in the same way as the rest of the clerical staff?—Yes, he would come in through the Civil Service Commission.

1908. But you pass into that particular department and generally gain familiarity with it?—Yes, you soak it in through the pores, as it were.

1909. You have no actual preparation for it in the Dockyards?—No.

1910. (*Mr. Mather.*) But I presume no one would be appointed to a responsible position such as yours who had not had the probation of passing through the Dockyards?—We have nearly all been right through the offices in the Admiralty. Mr. Miller, the Director, had been several years in a Dockyard; but that is rather an exception. We go down to the Dockyards occasionally on business of the Department. I was familiar with several Dockyards before I entered the Service, and have lived in one some time.

1911. You attach, I presume, very great importance to the instruction to the head of your department that there should be visits paid continually throughout the country to various firms to ascertain what is going on?—Yes. That has not been done of late years quite so much as it might have been, because the work has been growing and growing with the increase of the Navy, and recently the additional work caused by the war has made it difficult to get away from London.

1912. But you do attach great importance to it?—Great importance.

1913. I may say in that connexion that the practice assimilates most closely with that of large manufacturing firms, whether public companies or private concerns, throughout every trade in the country?—Yes, they see the works that they deal with.

1914. Their agents must be constantly moving about to know what is being brought out from month to month, or year to year, so as to inform their principals as to what they should do in future?—Yes.

1915. To that you attach very great importance?—Yes; from my experience I attach very great importance to that.

1916. (*Mr. Gibb.*) You said that the dates of proposed delivery of stores were frequently specified by the requisitioning Departments?—Yes.

1917. And that they sometimes specify impossible dates?—Yes.

1918. Do you find that there is a tendency to do that?—No, as a rule they do not specify any date; they say "urgently wanted," but occasionally they put in a date that is impossible.

Mr. W. C. B. Hall.

17 Jan. 1901

Mr. W. C. B.
Hall.
17 Jan. 1901.

1919. They try to make up for the delay in sending the requisition by suggesting a date for delivery, that practically cannot be obtained?—I do not think it occurs in that way, I think the demanding yard, the outlying establishment, names a date, and questions arise upon the demand, financial or otherwise, and a long time elapses before the requisition reaches us, and then the date that they have named has almost expired. It sometimes gives the makers of the goods less time than the makers of the requisition.

1920. You said that the Receiving Departments look after the hastening up of the contracts?—Yes.

1921. And that formerly that was done by the Contract Department?—Yes.

1922. So that I think you have had experience of both systems?—Yes.

1923. And I understand you to say that your experience leads you to think that the present system is the best?—I think so, certainly. You see if you concentrate the work of seven or eight establishments in the Central Office, the mere writing of the letters takes a lot of time, during which the information as to the state of the contract gets stale. The information must be supplied from the Yards, and it is much better that the officers should use it themselves, invoking the assistance of the Department only when they fail to get any satisfaction from the contractors.

1924. I notice that the very full and clear printed instructions for the Director of Navy Contracts are dated the 1st January 1894?—Yes.

1925. Had there been instructions previous to that date?—Yes, and there had been for about 25 years, I should think. They are revised from time to time as experience shows to be desirable.

1926. Do you find in the Admiralty great benefit from all the duties of the branches being so clearly and fully set out as is done in these printed instructions?—Yes, it is a great benefit. We do not interfere with one another in consequence. We know our own business and stick to it.

1927. Each branch clearly knows its duty from these instructions, and there is no danger of friction you think?—No. That was the origin of the instructions being printed, so that everybody in each department should know; and then they do not propose any interference.

1928. (Sir George Clarke.) Do you exercise a reviewing power over contracts made by other departments?—Contracts made locally?

1929. Yes, or outside?—We criticise them sometimes; we ask why they did this, that, or the other, or point out something not in accordance with the instructions. They come from Home and Foreign Dockyards and Commanders-in-Chief.

1930. Is there any criticising department exercises its functions over you?—Only the Auditor-General, I think, beyond the Superintending Lord and the Financial Secretary.

1931. (Mr. Mather.) The Accountant-General?—No, the Auditor-General; he sees the papers almost immediately, and asks peculiar questions sometimes.

1932. (Chairman.) You are probably aware that there is a department here in the War Office under the Director of Army Contracts?—Yes.

1933. Which is manned, I believe, by clerks who have come into the Service through the Civil Service Commission examination in the ordinary way?—Yes.

1934. Some of them pass into that department?—Yes.

1935. In your opinion would the experience which they are likely to gain in that department in the ordinary discharge of their duties be sufficient to qualify them to discharge efficiently a duty such as the Assistant-Director of Navy Contracts discharges at the Admiralty?—I should think so; I do not see any reason why it should not.

1936. That is practically the way in which the heads of the Director of Navy Contracts Department at the Admiralty gain their experience?—Yes, and of course

the experience you gain in going through the office is a great help to you when you reach the top.

1937. (Sir George Clarke.) But sufficient experience would not be gained by being brought up in the office and sitting there always?—No, you get to be the head of a branch, and then the head of the branch is sent away to examine factories or goes to a Dockyard to superintend an arbitration, or on some other business, and so picks up information. The heads of branches also are in frequent contact with contractors and technical officers of the Admiralty.

1938. (Mr. Mather.) Will you tell us what number of staff you require in your department from top to bottom?—We have about 30.

1939. All told, including the Director?—I think that is the actual number, either 30 or 33; we have three additional men on account of the war; I think they make 30, but we require strengthening. A cheap Contract Department is an expensive institution.

1940. What amount of money do you turn over in the course of a year?—About seven and a half millions.

1941. And the items, I suppose, are very numerous?—30,000 or 40,000, I should think. There are long schedules of items.

1942. (Mr. Gibb.) Does that seven and a half millions include stores manufactured in Government departments, or only stores purchased?—Only stores purchased.

1943. (Mr. Mather.) I asked you what your turnover was?—Yes, that is it. A great deal of it is of course beef, and things of that sort.

1944. Consumable articles?—Yes, Home and Foreign.

1945. (Sir Charles Welby.) Do you find these regulations in practice, easy and satisfactory to work under, as they stand here?—Yes.

1946. There is no point in them that you would wish to see materially altered, if you had your own way?—I think not. We are quite satisfied with them.

1947. (Colonel Miles.) Are there local contracts as well?—Yes.

1948. Dockyard contracts?—Yes.

1949. (Mr. Mather.) You do not happen to have an abridged list of the articles you have to buy, apart from food and consumables?—There is a book called Naval Store Rate Book; others for the Victualling, Medical, &c., services; they contain everything.

1950. You buy all sorts of nautical instruments?—Yes, but most of what you call nautical instruments belong to the officers themselves—sextants and things of that sort.

1951. You buy guns?—No, we do not. The Controller of the Navy buys guns—I think through the War Office.

1952. There is a certain line at which you stop. I was trying to get at it, where your duties end?—Special things like that, the Controller prefers to buy himself. Those are not included in the seven and a half millions. The division is made according to the Vote in the Navy Estimates.

1953. (Chairman.) I think that is explained at the head of the instructions: "The Director of Navy Contracts is responsible for the purchase of all stores, supplies, and machinery of authorised patterns, as articles of store, required for the use of Her Majesty's Naval and Marine Forces and Establishments, and for the conclusion of all contracts in connexion therewith, excluding only contracts for ships and their machinery, for guns and gun mountings, and for yard machinery"; those are excluded?—Yes.

1954. Those are under the charge of the Controller of the Navy?—Yes. The Financial Secretary does without the assistance of the Contract Department in dealing with the Controller's and the Works contracts.

1955. (Mr. Mather.) You buy no kind of gun?—No. All guns are in the Controller's Vote. We have nothing to do with them, unless some questions as to patents arise.

The witness withdrew.

Mr. WILLIAM PAYNE PERRY examined.

Mr.
W. P. Perry.
17 JAN. 1901.

1956. (*Chairman.*) You are Principal in the Contracts Division?—That is not quite correct now. I was Principal. I am now Assistant Director.

1957. That is practically the same office, is it not?—Yes, the duties are the same.

1958. And you have discharged those duties under the name of Assistant Director or Principal since 1897?—That is so.

1959. Were you in the Contracts Department before?—I have been in the Contracts Department since 1882.

1960. Since you entered the War Office?—Practically.

1961. Have you been in more than one sub-division of the Contracts Department?—In every sub-division but one.

1962. We have had from the Admiralty a printed paper, and a very clear paper it is, of Instructions to the Director of Navy Contracts. Are there any printed instructions to your department corresponding to that?—There is nothing corresponding to it. We have instructions handed down from prior Committees which have guided us, but nothing printed in that way, giving us distinct and definite rules.

1963. There are various regulations and instructions which have been given to the department from time to time, but they have not been brought together and summed up in a compendious copy of instructions like those?—Well, one or two Committees, the Purchase Committee in 1874, and a prior Committee, did draw up some instructions or regulations which the Director of Contracts followed, and those instructions have not been cancelled; therefore they still hold good. But they have been somewhat modified by later instructions.

1964. But you have no clear and comprehensive instructions up to date?—We have not.

1965. Would it not be of considerable assistance to the department if you had such instructions?—I think so.

1966. Both to the department, and as defining your relations to other departments?—I think if there is any trouble to-day, it is partly due to a lack of definiteness.

1967. That is to say, where you come into contact with other departments you do not dovetail in. The way you are to dovetail in is not laid down with great precision, and when, as between you and other departments, there is a sort of vague and debateable land; is that not so?—I do not know that it is quite that. I think it is rather that when we try to put into force the regulations and general instructions given to us from time to time and in the past, for lack of complete detail the people against whom we put those instructions into force do not quite like it.

1968. But, then, if you had a definite set of instructions, like those of the Navy, drawn up quite clear and precise, and you showed them to anybody who was complaining, there would be an end of the matter?—Certainly. I agree that if we could have those instructions, which we believe to be our instructions, and which nobody disputes to be our instructions, more clearly defined in detail, it probably would strengthen us, and prevent a certain amount of objection to the spirit of the instructions being put into use.

1969. Your instructions being, some of them at any rate, old, I suppose have been a matter of rather varying interpretation from time to time?—No, I think it is rather this: We are informed that we are the authority for purchases, and if it were laid down definitely that we are more than that—that we are to check and control all purchases—if it were brought up to date and specifically laid down by authority, by Order in Council, or any other method, that we really are the authority for this sort of thing, it would be accepted more freely than the mere spirit is accepted.

1970. What do you mean by checking and controlling purchases?—We understand that the Financial Secretary is charged with the duty of controlling all purchases; that is to say, that he either makes them or supervises them. We find very frequently that some local officers will, without authority, make inquiries and commit the department to a purchase.

1971. How do you mean commit the department?—By placing an order. For instance, the Principal Ordnance Officer at Woolwich will go round the trade.

1972. But he has only a limited power?—He has a power originally limited to 10*l.*, now increased to 25*l.* He has done such a thing as go round the trade and say, "I want a certain article," and practically promise to give an order, and then say he did so because he thought he could do it better than the Director of Contracts; or perhaps not quite so clearly as that; he would say that he thought it was good for the Service that he should do it, and when we tell him he was wrong in doing it, he does not like being told he is wrong.

1973. Do you mean to say that he actually commits the department?—The officer actually commits the department. A case occurred only a day or two ago. A Royal Engineer officer, at Salisbury Plain, has given an order for some huts. He had no authority to order them, and, moreover, the huts are not required; so that not only has he ordered something he ought not to have done, but he had no business to order at all. We have had to report that case, and he is, I believe, to be reprimanded for going beyond his instructions.

1974. As regards the question whether those huts were desirable or not, that is not a matter on which you could express an opinion?—No. He has been guilty of two faults. He thought four huts were required, and before he knew whether they were required or not, he ordered four huts. That is the first error.

1975. You would not be the department to determine that in any case?—No; it was an error against his superior officer at the Horse Guards.

1976. It would be an error against whom?—The Inspector-General of Fortifications.

1977. That of course does not come within our cognisance. Assuming for the moment that he committed that error, has he actually ordered the huts?—Leaving out the three huts that he ought not to have ordered, he orders one without authority to order one.

1978. In excess of any power he has to make small purchases?—Yes. Some officers like to give these orders, and they do not like afterwards to be told that they should not have given them.

1979. As a matter of fact do they frequently give these orders?—There is a desire to give these orders undoubtedly.

1980. But a great many of us may desire to do things without doing them for various motives?—Perhaps.

1981. (*Mr. Mather.*) Was it in an emergency that he ordered these huts?—There was no emergency.

1982. (*Sir George Clarke.*) But you would not be the judge of the emergency?—We are not the judge of the emergency, but are told whether they are required urgently or not. If there had been a great hurry about it, he could have telegraphed up to ask whether he could order, and we frequently agree to their order in an emergency; but there was no emergency, and yet he ordered.

1983. (*Chairman.*) But how did he commit you?—By giving the order.

1984. And it was impossible for you, if you had wanted to, to repudiate that order?—Yes. We frequently have to confirm these orders. It is very much like an agent being sent out by a firm to make inquiries, and that agent committing the firm and then asking for a covering authority. We give those covering authorities, but it is not business.

1985. But as a general practice the tenders are returned at the office of the Director of Contracts, and he decides upon which tender shall be accepted; is not that the case?—He decides with the concurrence of the head of the department concerned; he does not decide by himself.

1986. Now, do you always confer with the head of the department concerned—the requisitioning department—as to which tender shall be accepted?—Yes, unless by consent the reference is dispensed with.

1987. Always?—Always, unless by consent—invariably.

1988. I am, of course, quite willing to accept that answer; but do you think the heads of the requisitioning departments would confirm it?—Yes.

1989. Would they not say that tenders are sometimes decided upon without their being consulted?—Only by

Mr.
W. P. Perry.
17 Jan. 1901.

consent. As you raise that point, perhaps I might say something more about it. If ever anybody imagines that they are committed without reference, it must be through ignorance of the arrangements. For instance, it is arranged with the Ordnance Factories that no tenders shall be referred to them if they make no recommendations. If they leave their demand a clean sheet, the Director of Contracts, by consent, deals with the tenders without reference. If they make a reference, and the Director of Contracts proposes to override that recommendation, a reference must be made. But it is quite possible that some officers at Woolwich might not be aware of that arrangement; it is an arrangement made with the head office at Woolwich.

1990. In the instructions issued at the Admiralty to the Director of Navy Contracts we have this paragraph 10, the second half, "In regard to any tenders received for special articles or for supplies, as regards the nature or quality of which he may desire advice or information, or as to which the head of the department concerned has expressed a wish to be consulted, he is" (that is the Director of Contracts), "before submitting a tender for acceptance, to obtain the opinion of the head of such department." That instruction would make it clear, not only to the Director of Contracts Department at the Admiralty, but to everybody else in touch and doing business with that department, that if the head of a department did wish to be consulted with regard to the acceptance of this or that tender, he has only got to express that wish and he must be consulted. But there is no knowledge of that, in your opinion, amongst many of the officers of the supply departments?—No, I do not say so; there should be complete knowledge amongst all of them. I am trying to see if I could explain how it was that you imagined that possibly somebody was not aware of it. The arrangements are in writing, and well known. As a matter of fact the system in daily use, and is much stronger than that paragraph there. The departments concerned are asked for their concurrence much more freely than is suggested in that paragraph.

1991. In fact, in accordance with the Admiralty Instructions, when it is not a question of a special article, the head of the department concerned, if he expresses a wish to be consulted is consulted; but, according to you, in the War Office the head of the department would always be consulted, unless an arrangement not to consult him had been arrived at by consent?—Certainly; it is a much stronger case than that. With regard, for instance, to the tenders for the Inspector-General of Fortifications, every tender is referred to him. We never accept an order without first putting the tender before the Horse Guards.

1992. (Mr. Gibb.) Can you give us the writing in which you say the arrangement is expressed?—Yes, I could furnish it easily.

1993. (Chairman.) By the Horse Guards you call the Inspector-General of Fortifications?—Yes, it is only for brevity that we use the expression. With regard to the Ordnance Factories, every tender is referred where a recommendation has been made and we propose to accept somebody who is not recommended. With regard to the Director-General of Ordnance, only important tenders are referred; they are so numerous that it is agreed between the Director-General of Ordnance and the Director of Contracts that ordinary tenders shall not be referred unless asked for, and when they are asked for they are referred.

1994. Then they should not be referred, even though the recommendation of the Director-General of Ordnance may be set aside?—He does not make one. If he does make one of course we refer, but it is very exceptionally that he makes one.

1995. Therefore there would be no case in which the recommendation, if made by the Director-General of Ordnance, would be set aside or over-ridden without consultation with him?—No, we absolutely wish to do our duty. If the Expert Department expresses any wish, even if we think it a wrong one, we should distinctly make a point of referring it; otherwise the office arrangements fall to the ground. The slightest suggestion of a desire is quite sufficient.

1996. On the part of the requisitioning department the slightest expression of a desire would be met?—It is absolutely sufficient.

1997. Mr. Major, when he was here, told us that part of the duty of the Director of Army Contracts was informing himself as to all the sources of supply

throughout the country, and the Assistant-Director of Navy Contracts has told us that he and his department when they can, visit the establishments in the manufacturing districts about the country, and so keep up their knowledge and acquire fresh knowledge. As a matter of fact, in the Director of Contracts' Department at the War Office, is anything done in the direction of actually visiting establishments in the manufacturing districts and so on, or is all the information which you gather gathered from what comes into you at your room at the Central Office, in seeing contractors and people who visit you there?—A great deal is done by visiting; visiting is quite as much a system at the War Office as at the Admiralty, only from lack of staff it has not been carried out quite so efficiently in the past. I have been in the branch 18 years, and from the day I was there visiting the centres and particular firms has been the system. I have been about myself, and my subordinates are always going about; I suppose we have somebody going from the branch once a fortnight; it is quite a recognised system.

1998. When you say it has not been done as much as might be desired owing to shortness of staff, do you refer particularly to the unusual and abnormal stress of work during the war, or to the period before the war?—The branch has never been properly staffed in the 18 years that I have been there.

1999. You have, I believe, about 60 clerks?—At the present moment we have 62, omitting myself.

2000. At the Admiralty, I believe, the Director of Contracts has about 30?—They have had no pressure. Before the war we had 30.

2001. (Mr. Gibb.) What would be the value of the stores?—The value of the stores is about four to three. The Director of Army Contracts deals with about four to the Director of Navy Contracts's three—four millions to three millions. It is, roughly, eight millions to six millions. But with regard to that, even the proportion of value is not a sufficient guide. The Admiralty deal with a very clearly cut store arrangement. They have ships, and each ship has its store marked out for it, and therefore they can deal with the thing on a satisfactory system; they can usually systematise their orders so as to go to the trade about once a year for one particular article. The War Office has to supply the Army in various quarters, and the Colonies, with a great variety of stores; and partly, I should also think, from the absence of sufficient reserves, at times, the orders are very frequent. We may have demands for the same article week after week. Consequently, for the same value of goods the amount of trouble involved is very much greater.

2002. (Chairman.) You have told us that in the course of your service in the Contracts Department you have been in every sub-division except one?—Yes.

2003. Were you in the sub-division which deals with miscellaneous manufactured articles in metal and wood, machinery, ironwork, and so on?—Yes; I have been in every department except the one dealing with food supplies.

2004. While you were in that sub-division, did you actually go down to the manufacturing centres and establishments?—I have been to Birmingham two or three times, to Sheffield once or twice, to Newcastle, to the silk district, but not to very many other places. I myself have not been about so much as I should like to have gone, simply because I could not easily be spared.

2005. About how long were you in that sub-division?—It is difficult to say, because the arrangements have been modified. I have been dealing with miscellaneous stores in one way or another practically ever since I came into the branch.

2006. In whatever subdivision you have been you have made visits?—I have not made many myself. I believe in the system very much, and the practice is to follow it as far as possible; but we have practically had to have one or two men going about for that duty instead of doing it ourselves, because otherwise we could not keep the work going.

2007. When you say that you have had to have one or two men going round, you mean subordinates in the branch?—Yes.

2008. Upon whom would that duty generally fall—upon the head of a subdivision or one of the seniors?—We have had to make the best arrangement we could. One or two men have been more sent than others. One

gentleman, who is now a Staff Clerk, has been used considerably.

2009. (Mr. Gibb.) You say that you have not been able to make systematic purchases at certain times of the year, as is done in the Admiralty?—Yes.

2010. And that is because requisitions come into you at odd times throughout the year?—Yes.

2011. From your experience do you think it would be possible to systematise those requisitions so that you could, as far as practicable, make annual purchases?—Yes and no. It would not be possible under the present financial arrangements to make annual purchases for Ordnance Factory materials.

2012. It would not be possible, because financial regulations would prevent it?—Yes.

2013. Apart from that would it be possible?—In some directions, most certainly.

2014. To any substantial extent?—It hangs so much upon the date on which the Ordnance Factories get their orders.

2015. That is a financial matter?—That is not only a financial matter; it is not the Director of Contracts' business to say whether it is possible or not; the orders for the factories are given by the military authorities, and I should imagine they would have difficulty in giving those orders at one time of the year only, because they do not know from time to time when the patterns will be settled, or various other questions that might postpone the orders.

2016. I was only following out what I understood to be rather your own suggestion, namely, that you were placed in a comparative difficulty by the odd times that the requisitions reach you?—We are placed in a difficulty. The difficulty is, I suggest, partly due to the miscellaneous orders which the military authorities have to deal with compared with the Navy, who are dealing with a few definite ships, all fitted out on somewhat similar lines.

2017. But if the difficulty is a real one, which injuriously affects the public service, there is some authority that can deal with it?—It affects the public service in giving us more labour. I said that it would not be fair to merely look at the question of the value of the stores placed by the Army as against the Navy, without considering also the intrinsic nature of the orders, which renders them more troublesome in placing, and therefore gives more labour. It is undoubtedly possible that a system can be adopted which would to some extent render it not so bad as it is. We try for it, we press for it.

2018. Do you say you did press for it?—We have tried many times. We have pressed for it.

2019. Whom have you pressed?—We have pressed the military authorities for it.

2020. Who would that be?—It would be the Director-General of Ordnance at the present day.

2021. You take that question up to him?—We take that question up to him repeatedly; we have pressed it with him and his predecessors.

2022. And what has been the reply?—The reply is that it is impossible to anticipate the requirements better than they do. If I may take a case in point, we have been asked during the present pressure to buy such things as tarpaulins to cover stores out in South Africa. I think we have been asked something like a dozen times to go into the market for tarpaulins and sail covers. From a business point of view it was very unsatisfactory to disturb the market a dozen times for the same article, apart from the question of the labour involved. If we could have known at the beginning of the war, or at a certain period in the war, that we might have bought 50,000 it would have very much facilitated the purchasing them economically, and it would have been very much better too from the point of view of our own labour. But the answer of the military authorities was that they could not possibly anticipate the number of covers required, that they cabled out to the front to ascertain whether more would be wanted, and the reply was that no more would be wanted; and then a further cable would come a week later asking for more.

2023. At all events, I understand you to say that from the point of view of the Purchasing Department it would be a distinct advantage if you could get your

orders to purchase at definite dates for the largest possible quantities?—Certainly.

2024. Instead of these orders being given at different dates during the year?—Yes.

2025. (Mr. Mather.) Of all the military departments that you have to serve, I presume the Quartermaster-General's Department is the one that gives you least trouble, inasmuch as your relation to the Quartermaster-General and his official staff is chiefly in the purchase of consumable articles and perishable articles?—In which sense do you mean the least trouble.

2026. In the sense of any friction or want of cordiality or understanding?—But there has been no want of cordiality and there is no friction. I admit no friction.

2027. With that department?—With any department. There may be friction with individuals; there is no friction with the department.

2028. I will narrow my question down to individuals. In the Quartermaster-General's Department the nature of the services that you have to render to him does not, of course, admit of much friction between the individuals of that department and your branch of the service?—So far as the actual arrangements go they are on identical lines; we treat and deal with the Quartermaster-General and his department in exactly the same way as we do with any of the departments.

2029. Excuse me, I want to point out that the very nature of the stores required for that department differs so much from the nature of those required by all other departments that no question of technical knowledge or technical experience comes in. In going to market and buying so many tons of beef or perishable stuff, that is a simple matter; so that I quite understand that with that department you can have no misunderstandings; but when you come to the Inspector-General of Fortifications and the Director-General of Ordnance, is it not frequently the case that you have differences of opinion with the heads of those departments on matters of a technical character affecting very much the technical work for which they are responsible?—No.

2030. The evidence before us is very much to the contrary. I am not putting the question without ground for it. I merely want to ask whether you have felt any amount of friction existing?—I should like to say very much more about it, but I have not read the evidence which has been given before this Committee, and so I cannot speak with regard to it. But I will try to make clear what I mean. There is no more technicality involved, from the Director of Contracts' point of view, in meeting the requirements of the Director-General of Ordnance than there is in meeting the requirements of the Quartermaster-General; they are, from a contract point of view, absolutely on level terms; we have no more difficulty in meeting orders for the Director-General of Ordnance, or for the Ordnance Factories, or the Inspector-General of Fortifications, than we have in meeting orders for the Quartermaster-General. From a contract point of view, it is as difficult and as easy to make a contract for supplies as it is to make a contract for stores. The inspection, the technicalities, are in the hands of the military authorities. The Quartermaster-General inspects his forage and his meat; the Director-General of Ordnance inspects his stores; each draws up a specification for his stores, and we consult each before we place the order.

2031. Then, may we take it from you that in ordering highly complex machinery, electrical machinery, steam engines, mechanical appliances, scientific appliances of all kinds, and so on, that are required in these two departments to which I have referred, you simply act as agents, as, so to speak, the channel through which the requisitions of those scientific officers pass to the contractors—that you have no kind of option yourselves in placing contracts for such very important articles, but that the specifications and instructions connected therewith come direct from the officers in question, and you perform, and blindly perform—subject, of course, to receiving tenders from various selected firms—the will and pleasure of those gentlemen?—If I said yes I should say that we were a post office; and we are not a post office.

2032. Excuse me, but do you say yes or no?—I say neither; I say that with regard to the technical side of

Mr.
W. P. Perry.
17 Jan. 1901.

Mr.
W. P. Perry.
17 Jan. 1901.

the question we never have disputes. This is what we do. Take the case, for instance, with regard to the engines that are now being used for emplacement for electric light about the country; the Inspector-General of Fortifications suggested that only one firm was a fit firm to produce those engines. We said, "We are willing to accept that at present on your expert authority, but we must ask you to consider this question from a wider point of view." We placed the orders at his request; we made the formal contracts. As making formal contracts we are bound to look into the question and see that the price is correct, that the contract is a correct contract, and to keep a record and watch the transaction. We brought that matter forward from time to time, and at last we said to him, "We think it is time that we should see whether we cannot get other engines equally good for the purpose." He agreed, and we went to competition, and he agreed with us that it was desirable to place another engine in competition with that particular engine for that purpose. We have had that competition, and we now have two engines in lieu of one for doing the work. That is where we come in. We do not pretend to say that we know the details of an engine; we never pretend to do anything more than our duty; we never in any way attempt to dictate or interfere with any expert officer with regard to expert matters.

2033. Since you have already referred to the instructions given to the Director of Navy Contracts, you know that from those instructions are withheld all orders of supplies which consist of running machinery and what we may generally call scientific plant; the Director of Navy Contracts has no power to order anything of that kind?—The Director of Navy Contracts does not deal with quite so many stores as the Director of Army Contracts does.

2034. I am not now speaking of the quantity of stores, but of the nature of the stores, and I say that these scientific articles are not dealt with by the Director of Navy Contracts?—The Director of Navy Contracts does not deal with the variety of stores, with the different classes of stores, that the Director of Army Contracts does. The subject was considered by a Committee years ago, and the Committee stated that they thought there should be one purchaser for the War Office, that they did not propose to interfere with the Director of Navy Contracts, as it had been agreed to that, he should not do all this work; but that their view was that where possible the Director of Navy Contracts should be brought into line with the Director of Army Contracts.

2035. (Chairman.) If I may venture to attempt to interpret Mr. Mather for a moment, I think the question rather is, are you aware that the purchases of certain scientific articles such as ships, and certain machinery and guns for the Admiralty, are excepted from the duties of the Director of Navy Contracts, that is to say, that he purchases for all departments except for the two departments which are excepted, for which he does not purchase?—Certainly. There are three departments for whom he does not buy.

2036. You were aware of that?—Perfectly. He does not buy for the Director of Works; he does not buy ships, and he does not buy, or did not buy, scientific instruments for the Hydrographic Establishment.

2037. (Sir George Clarke.) You spoke of a Committee that furnished a sort of a charter for the maintenance of the business of the Contract Branch. Were the proposals of that Committee formally adopted by the Secretary of State?—Yes.

2038. Then practically you regard your functions as defined by the order that the Financial Secretary controls all purchases, that is really the charter of your powers?—Yes, and that bears, I think, upon the question which Mr. Mather asked me just now, and which I did not fully answer, namely, whether we had any difficulties in dealing with the Quartermaster-General's Department, and whether they were not more easy to deal with than other departments; and he suggested, that by the nature of the stores we had not the same difficulties. There is not a great difference in the nature of the stores; it is rather in the acceptance of those regulations as laid down for us. If I may take a case in point, some local officers, as I said before, like doing their own business. If the Principal Ordnance Officer or the Chief Ordnance Officer at Pimlico goes out of his way and buys things which we think he ought not to buy, he is supported in doing that by the Director-

General of Ordnance. The Quartermaster-General has under him at Woolwich Dockyard his chief inspecting officer, called the Deputy-Assistant Adjutant-General, for Supply Inspection. That officer has to inspect all the goods bought for the Quartermaster-General, and he, like some other officers, is very anxious to do his own business. We point out to the Quartermaster-General that it is incorrect for that officer to buy that we can buy them better and quicker; and he says, "Most certainly it is your duty, and not my officer's." That is why there is no friction.

2039. The fact that the regulation enjoins that the Financial Secretary controls all purchases, and the further fact that it is the Financial Secretary who is in closest touch with the Secretary of State, confers large powers on your department, does it not, especially from the fact which you have stated, that your department has no regular instructions issued to it?—It confers very large powers certainly, but then they are always subject to criticism. I mean to say that they are checked by the fact that we have to act in concert with every head of a department for whom we buy.

2040. But my point is rather that you wield greater strength from the nature of your position, and the undefined character of your instructions, and your close position with respect to the Secretary of State, than the departments which confer with you?—I do not see how we can. We call for tenders for stores that they ask for; they lay down the conditions on which those stores are placed. We call for tenders and put those tenders to them, saying, "We propose to accept so-and-so," and they agree or they do not agree. If they agree the order is placed; if they do not agree it goes to the Secretary of State for settlement. In what sense can we have more power than the departments for whom we buy?

2041. I think you said that the Principal Ordnance Officer at Woolwich was rather apt to take matters into his own hands, and to commit your department to certain things that you did not like to be committed to. Might it not be the fact that the Principal Ordnance Officer does that sort of thing very properly in the interest of the service, because time is exceedingly pressing in connection with the South African War, and would not such an emergency as that fully justify him in the action that he took?—Perhaps I was rather wrong in selecting Colonel Steevens, the Principal Ordnance Officer; I do not think he has offended very much in that way; I should rather select the Chief Ordnance Officer at Pimlico. Emergency undoubtedly is the excuse. The question is whether anything is gained by breaking regulations. The Director-General of Ordnance, for instance, decides that he requires 10,000 garments. Across the passage is the Director of Contracts; at Pimlico is the Chief Ordnance Officer. If he would ask the Director of Contracts to buy those garments, he can move at least as quickly as the Chief Ordnance Officer at Pimlico. In the one case it is his duty to do it, in the other it is not his duty to do it. The one has a complete list of firms to go to and all the machinery for doing it; the other has no list and no machinery.

2042. Then from the point of view of the Contracts Department it would be regarded as an offence to act in an emergency in the way that the Principal Ordnance Officer acted in regard to certain matters, as he has explained to us?—We do not call it an offence. I am afraid that is where the idea of friction comes in.

2043. I think you used the word "offended"?—We do not call it an offence. It is an offence against the regulations. Against the Military Department it is not used as an offence. We try to live in perfect peace with all men. With regard to any criticism which we put forward, we put it forward to the superior officer; we do not go to the offending (I use the word again) subordinate, and say, "You must not do this"; we go to the superior officer and say, "Do you think this is right?" The superior officer is inclined to say sometimes, "I think he did the best he could, and we should accept it"; we say, "Yes, we think he did the best he could," and we accept it; but we do not think anything is gained by it. We check, we do not blame.

2044. Now, with regard to visits of inspection; is it not the fact that they are rather of a modern nature? When they went to visit some cordite factories the other day, would not it be one of the earliest of such visits?—No; but with regard to that I would like to say a little more. The visit to the cordite factories was not at the instigation of the Director of Contracts.

Personally, and Mr. Major would agree with me, it is not a sort of duty that we go in for. A full investigation of the manufacture of cordite involves, certainly, to some extent, scientific knowledge. At the same time the method of production is simple, and therefore a man with common sense, and the knowledge which we possess, can do pretty well. But it was at the direction of the Financial Secretary; it was in connection with an error of judgment, I think, on the part of the Director-General of Ordnance in having previously sent his officers without consulting the Director of Contracts. I will say a little more: It is, as I said before, absolutely a system of the Contract Branch to make personal visits to the trade. The object of those visits is two-fold: first, to ascertain the capabilities of the trade, and, secondly, to make personal inquiry in connection with complaints or other difficulties. The Contracts Department makes inquiries into capabilities only when it requires common ordinary commercial knowledge and common sense to judge of those capabilities. If we want to know whether a firm is able to make scientific instruments for the department, and, if so, which description of scientific instruments, we do not send a member of the Contract Branch. Theoretically, we ask the Director-General of Ordnance to assist with an officer to accompany one of our representatives; but owing to the shortness of staff, we usually dispense with the Director of Contracts' representative. Consequently, for some years the usual practice has been, where a scientific knowledge was required, to send a military officer only.

2045. Then the point is, that you object to military officers going to these firms, but you are not always able to send an officer from your department to accompany them?—We do not object to their going; we ask to have them sent, but we like to have someone going with them; we ourselves ask to have them sent; we are very glad of their assistance, but we say that they should not go except at our instance. The capability of any firm for contract work is a contract matter; we keep the records; and the Secretary of State has recently confirmed that view. The cordite visit began in this way: We heard that contractors for cordite were being visited by a military officer; we inquired why he was going; we were told that he was going to ascertain the capabilities of these firms to carry out contracts. We simply said, We think that the starting of an inquiry of this sort is for the Director of Contracts. We put that to the Secretary of State with the Director-General of Ordnance's remarks, and the Secretary of State maintained our position. In the meantime the Director-General of Ordnance, finding that the question was under discussion, stopped the visit of his experts. The Director of Contracts was told to send his officers off immediately to make the inquiry, and we arranged with the firms that this should be a preliminary inquiry only, and that probably a further inquiry would be made afterwards. The representatives of the Contracts Branch made a very excellent report—so excellent a report that the Admiralty Store Officer says it fully answers all purposes—and that report was put to the Director-General of Ordnance, with these remarks by us: "We have made this preliminary report under instructions. Are you satisfied that it is sufficient, or do you consider that a further report is necessary?" The Director-General of Ordnance put the question to the Admiralty, the Admiralty put it back to the Director-General of Ordnance, who referred it to his expert officers. Our position in the matter, I think, was perfectly sound and correct.

2046. I have only two more questions to ask you which will only require very short answers. The Director-General of Ordnance has recommended that travelling inspector experts should be added to your department, and the Treasury has been approached on the point. The addition of those travelling inspector experts would seem, would it not, to indicate that your department had up to the present time been slightly weak in performing its inspecting duties?—It has been weak. I acknowledge that it has been weak, solely because we have not had the staff.

The witness withdrew.

LORD HALIBURTON, G.C.B., called in and examined.

2064. (Chairman.) I believe you were Director of Supplies and Transport from 1878 to 1888?—Yes, and Assistant Director for a number of years before that.

2047. You are aware that five years ago I made a strong recommendation that triennial contracts should be entered into for certain stores for the Arsenal; that I showed at considerable length that there would be a great saving; that I scheduled the stores which could be obtained in that way, and gave a list of a year's probable demands. I gather that you are not unfavourable to such a proposition as that?—No. There is one thing you must excuse my saying; amongst those items you included petroleum.

2048. No, I had nothing to do with petroleum?—Then you included turpentine?

2049.—No, I do not think so?—Yes.

2050. It is not a thing I should include?—That proposal did not come from you?

2051. No.

2052. (Chairman.) Without going into details of the articles in question, supposing that there were articles that could be dealt with on that system, would you or would you not approve of the system of triennial contracts?—Three-year contracts have advantages within certain limits, but may I say something more?

2053. I think at this moment we want an answer to the question, and no more.

2054. (Sir George Clarke.) And three-year contracts act beneficially in regard to the barrack services?—Three-year contracts are good if the requirements are fairly even and the market price fairly uniform; otherwise they are bad.

2055. (Colonel Miles.) You have referred to what I think you have almost called the indecent tendency of the military to make purchases in certain cases without referring to you. May I ask you are those cases that you refer to more particularly in the districts themselves or in those departments which are round us here. Do you often find them in the districts?—These things do not happen every five minutes; they are quite exceptional. It was only in explanation of the suggested friction that I mentioned them.

2056. They are quite exceptional?—They are quite exceptional.

2057. Do you not think it is conceivable that when they are made there is some answer on the part of the military, as to their having been made, that they have some reason for it?—No officer who is a proper servant of the State will do a thing without reason.

2058. Then you admit that they are done with good reason?—I admit that the intentions are good, not the results.

2059. Do you not think that cases of emergency may arise when it is absolutely necessary that they should do so for the efficiency of the Service?—Most certainly, and we agree to them with pleasure.

2060. When you spoke of that particular case which has been referred to, of the visitation of cordite factories which was made without your concurrence in the first instance by the Director-General of Ordnance, that paper went forward; you go direct to the Financial Secretary, do you not; you minute him direct?—Yes.

2061. It is not necessary in all cases that there should be other minutes besides your own paper; you take a case direct, and take his decision?—It is usually put to both sides.

2062. (Mr. Beckett.) You say that it is the business of your office to check and control the heads of departments; do you not think it is rather the business of your office to help forward and promote the business that has to be transacted by the department?—Yes; when I say check and control, I do not mean to say stop; it is just the other way round. The friction does not come from us; there is not the slightest desire in any way to check in the sense of stopping; it is in the sense of helping.

2063. You mean to say that you do not consider that you are ever unduly obstructive?—On the contrary, I think very often we are not obstructive enough.

Mr.
W. P. Perry.
17 Jan. 1901.

Lord
Haliburton,
G.C.B.

Lord
Haliburton,
G.C.B.

17 Jan. 1901.

2066. Therefore I suppose you have a very extensive acquaintance with all the duties of the Supply Department, and also came into contact a great deal with the Contract Department in this Office?—Yes, I think we had six military expeditions in those 10 years.

2067. And that brought you frequently into contact with the Contract Department?—Yes, daily.

2068. Were the functions of the Contract Department in the Office in those days, as far as you know, similar to the functions of the Contract Department now as regards the Quartermaster-General?—Yes, I do not know of any change in it. He made all my contracts for me.

2069. Did you have any reason, while you were occupying that position, to be seriously dissatisfied with the Director of Contracts Department on account of delays or misunderstandings, or otherwise?—No, never, I think. I always myself dealt directly with the contractors the moment the contract was made, and if there was any difficulty I sent to the contractor, and then, if I could not manage the contractor and get things delivered in the way they ought to be, I called for the intervention of the Director of Contracts.

2070. That is to say, you kept watch over the order while it was in progress, in order to see that it was being satisfactorily carried out, and no delay would be likely to arise?—Yes.

2071. How did you do that?—I did that by the various officers at the depôts where the things were to be received.

2072. Through the officers who would inspect and receive?—Yes; and in war time I had, when necessary, daily reports made as to what had come in at various places, so that I might know how a contract was going on, and if I found delay I sent for the contractor.

2073. You sent for him, but you would also send one of these officers to visit his establishment?—Yes, they constantly did that. Our main depôt was at Woolwich, which was where I had the chief reports, but we also had depôts at Liverpool and other places in time of war.

2074. Were those officers officers who might afterwards be charged with the duty of pronouncing whether the articles received from the contractor which they had inspected on some other occasion should be received or not?—Yes.

2075. It has been stated here, and I think a decision has been recorded in the Office, that officers who are employed to inspect or pronounce on the rejection or reception of goods should not be employed to watch the progress of an order while in execution on the contractor's premises. That must have been a decision subsequent to your tenure of this appointment, I suppose?—Yes, it must have been on some special grounds, I suppose. Ordinarily, the man who inspected the supplies which came in was not the head officer of the depôt; it was one of the subordinate officers, but the head man would be the man responsible to see the contracts were being carried out; the inspector had to see that the deliveries were up to standard.

2076. I think the theory now obtaining at the Office is that it might be dangerous in the public interest if the inspectors, who had afterwards to decide on the rejection or acceptance of goods from a contractor, should be put into such close touch with the contractor as might be involved in their being about his establishment looking to the progress of an order?—That might possibly be the case. I should think it perhaps would be better to employ other than the men who had finally to decide on the quality of the goods to be delivered. The inspectors, as a rule, I should imagine have quite enough to do with the inspection of the delivered articles.

2077. Apart from having enough to do, it has been laid down, I believe, that the principle is a wrong one, as involving a danger. What do you say as to that?—It is a constitutional maxim that too much confidence in individuals is never desirable.

2078. There seems to be some uncertainty at the present moment as to who is exactly responsible for supervising the progress of an order while it is being carried out, and I think we may take it that it is generally admitted that there is some weakness on that point: because there is a proposal now before the Treasury, which we believe is going to be accepted, for arming the Director of Contracts with two

special officers as an experimental measure in the first instance, two travelling inspectors, whose duties would very largely consist of supervising the progress of orders throughout the country. What do you say as to that?—I certainly should never in my time have adopted that course. I would expect the executive officers of the Army, who were dealing with those things, serving at a particular depôt, to see that the supplies came in, and, if they did not come in, to report it.

2079. In your opinion, supposing further agency is needed for supervising the progress of orders, that duty ought not to be attached to the Director of Contracts?—No, I think an expert officer acquainted with the Service should do that; a Director of Contracts cannot be an expert in the supply of all the stores to the Army, and, therefore, I should say you should draw the man you want to make that inquiry from the department which is being served with those stores. They are both servants of the War Department with the same interests to serve.

2080. In spite of the possible danger which there would be in putting these inspecting officers in contact with the contractors?—But he would be only technically an inspecting officer; there are many officers in these large depôts, and anyone might be sent. I think there is a staff of inspectors, but it would not be necessarily one of those men, though I should think occasionally they might be employed with perfect safety.

2081. I think we understand those are the men employed at the present time?—I do not see any objection to it.

2082. Are you aware what is the practice of the Admiralty?—Yes, I know generally.

2083. On that particular point?—Yes, on that particular point. They employ their Director of Contracts a good deal—I think more than we did in old days—I cannot say what is done at present. I am three years out of date now.

2084. We understood that the inspectors from the various receiving departments of the Admiralty do supervise?—They do, but the Director of Contracts does also.

2085. They appeal to him if there is any difficulty, and he presses and hastens the contractor, does he?—Yes, and that is a sound system, I think.

2086. Two criticisms have been passed on the Contract Department by various persons who have been before the Committee. One criticism is that the Contract Department is a mere fifth wheel in the coach, and is surplusage, and that the work of purchase might be done equally well by the Supply Departments, and that as a matter of fact the Contract Department has no knowledge of where the articles can be got economically, promptly, and of good quality, but is in fact simply a department which opens tenders. Another criticism is that apart from being surplusage the department of the Director of Contracts is rather a mischievous intervention, and that where a Supply Department has recommended that an order should be placed in a particular quarter, that recommendation is sometimes set aside by the Contract Department, presumably acting under the desire of widening the area of competition as much as possible. What would be your view as regards those two criticisms?—With regard to the first—about the fifth wheel to the coach—you will always find, I think, the tendency of every sub-department is to desire to get the whole business into its own hands. Well, the business of a Government cannot be carried on on those lines; you must have check and counter-check, and I think it is a desirable thing that the man who is dealing with the stores and paying for them should not be the sole person to decide where they are to be got from. I think it is a wholesome thing to have a check, and if the Director of Contracts is fit for his post, and people under him work properly, he must know a great deal more about the general trade of the country than any particular department can know; he ought to know a great deal more, and presumably he does know a great deal more.

2087. With regard to the criticism that the intervention of the Director of Contracts is sometimes prejudicial to the public interest in setting aside the recommendations which are made, what do you say?—I cannot quite understand that, because if the Director of Contracts sets aside the recommendation, say, of the Quartermaster-General, where the particular things

are to be bought, the Quartermaster-General has only to appeal to the Secretary of State and have it settled.

2088. And there would be no difficulty and delay in getting that appeal through?—No, none whatever.

2089. I may say that we have a conflict of opinion upon that?—There is always a delay in discussion, but it ought not to be a delay of more than a day I should think.

2090. I suppose if the work was carried out in a satisfactory manner, such questions could not arise; there would be closer contact between the Supply Department and the Director of Contracts?—My impression is that the regulation provides for it, and that in making the contracts he has to do it in communication with the head of the department.

2091. Then the question is how far that regulation is or is not sometimes followed?—As I said just now there is a desire on the part of the heads of departments to get things into their own hands, and no doubt the Director of Contracts likes to get things into his own hands, too; but you must look to the head of your office to keep things in order.

2092. Do you mean the Permanent Under Secretary?—The Permanent Under Secretary, if he finds they are not working harmoniously, ought to bring it to the notice of the Secretary of State and settle it. Every man in office now and then wants to be brought up and made to do his duty, perhaps in a way he does not altogether quite like himself.

2093. I rather gather that you would attach importance to the office of Director of Contracts as being an office for collecting and bringing together very considerable information about markets and prices all over the country?—Yes, I found it very valuable. I had not time myself to inquire into the course of trade in various things. That was his business, and I had only to go to his room to find out all I wanted.

2094. You found he was in possession of a considerable stock of knowledge?—Yes.

2095. Were you aware how he procured that knowledge?—No, I do not know all his machinery, but he was constantly in touch with the people dealing with these particular things I wanted; he knew all about them, their names and the extent of their business, and where their sources of supply were.

2096. Did he, in your knowledge, either himself or by officers of his departments, visit the establishments of contractors?—Yes.

2097. Was that a recognised part of his duty?—That was a recognised part of his duty. Occasionally he would go and see the contractor's establishment, in the case of a large contract going on.

2098. In your opinion could he do that usefully; without having technical knowledge?—Of course not so usefully as if he had technical knowledge, but if he is a business man with his head screwed on the right way he must get great advantage from seeing these things; in fact he educates himself in that way.

2099. Then it follows, does it not, that assuming the staff of the Contract Department is too small to allow of men being detached for visiting establishments in manufacturing districts, your opinion is that a proper Contract Department ought to be of sufficient strength to allow that important work to be carried on?—To allow of the general examination of contractors' establishments in order to learn their capacity, but I do not think for the technical examination for the turning out of particular stores; that ought to be done by the heads of the particular departments concerned.

2100. I am alluding to the visits of officers to manufacturers and finding out the sources of supply, and so on?—I was under the impression that was done occasionally.

2101. Apparently they do it occasionally, but they have been so overworked, or the staff is so inadequate, that they have not been able to do it?—Possibly now, yes.

2102. Even before the war, would you consider it of importance that there should have been a sufficient establishment to carry out such inspections?—Yes, I think it is important to the extent of giving officers general knowledge of the capacity of the contractors, their respectability and all that sort of thing; but not too much technical knowledge. I would get that from the departments which have the technical knowledge;

for after all it is all one business—it is only another sub-department in the same business.

2103. You would have intelligent men going about and picking up what knowledge they could?—Yes.

2104. With regard to prices and course of trade and so on?—Yes.

2105. And any technical information would be dealt with by the technical officers in the technical departments?—Yes.

2106. Do you also consider that the Director of Contracts is a factor on the side of economy? I mean that he tends in the direction of the acceptance of the lowest tender, while in the desire to turn out the best article possible the Supply Departments might rather place the excellence of the article above motives of economy?—Yes, possibly, and advantageously sometimes, but as a rule the department getting the stores is to a certain extent responsible for the vote, and it likes to keep the vote down as much as possible. They have an incentive to economy but not quite so great an incentive perhaps as the Director of Contracts, who is only responsible for making the contracts.

2107. Where does the Director of Contracts' incentive for economy come in?—I do not know that it comes in at all except to his own credit for making advantageous contracts.

2108. In the efficient discharge of his duty?—That is all.

2109. Of course the incentive on the part of the man who has to deal with the vote would naturally be very great?—Yes, and that is where you would look for economy, I think.

2110. But in your opinion the Director of Contracts might usefully assist in opening up larger areas of competition, and so on?—Yes, I think he ought to have a fair knowledge of the trade of the country in those particular things he has to deal with, and he should cultivate that knowledge in a variety of ways.

2111. You say if you had any differences with contractors you sent for them?—Yes, always; and if I thought it was going to be a troublesome case I would ask the Director of Contracts to come to my room and see the man together, but if it was a simple case I would settle the matter with the man myself.

2112. Then you were working in perfect harmony with him?—Yes, perfect.

2113. There was no friction?—Never; I do not remember ever having any difficulty of any sort. Sometimes I thought he took the side of the contractor when we had a little difference, more strongly than I would. It was his business to do that, and I never objected to it, but I never gave way if I thought the interests of the Service required me to be firm. But the natural tendency of the Director of Contracts is this: he looks upon himself as having charge of the interests of the contractor as well as of the public, therefore he necessarily advocates sometimes the contractor's side of the question in discussions with heads of departments.

2114. Does that mean that in the interests of the public, in order to be on good terms with contractors, and to have all the best people possible applying for War Office contracts, he would rather deprecate what he might think an unnecessarily severe measure being adopted with regard to them?—Yes, I think he would say, "You must not always insist on the pound of flesh; you must give and take a little," and that is a very good thing to introduce, because a head of a department, who is very much pressed is apt to think the contractor is not doing as much as he could do; therefore you want his view modified a little sometimes.

2115. And the Director of Contracts, knowing more about the general conditions of the market and trade, would have the feeling that if you exacted the utmost farthing out of your farmer for rent every year, you might have your farm thrown on your hands?—Yes, they would put up their prices.

2116. If they felt they were going to have fines put upon them, they would put up their prices, would they not?—Yes, if it is over-done; and of course the head of a department must see the Director of Contracts does not carry that too far; nor, on the other hand, fail to impose fines when they should be exacted. It is a question between two heads, and how they pull together.

Lord
Haliburton,
G.C.B.

17 Jan. 1901.

Lord
Haliburton,
G.C.B.

17 Jan. 1901.

2117. If the head of a department thought the Director of Contracts was carrying that too far or not far enough, he would appeal to the Financial Secretary or the Secretary of State?—Yes.

2118. Did you, as a matter of fact, often appeal yourself?—No, I always listened to what the Director of Contracts had to say; he often convinced me he was right, and when he was not I insisted on it that he should adopt my view.

2119. Both working in the public interest, by a process of exhaustive discussion you arrived at a satisfactory solution?—Yes.

2120. I gathered from one witness that he thought an appeal to the Secretary of State would be attended with many delays. You never felt any difficulty at all in carrying out an appeal as against the Director of Contracts, did you?—None at all. Of course in a very large department like this there is a greater delay in doing business than there is when a man does his own business himself, but that sort of delay you must expect in a large department; it is absolutely essential and unavoidable. That applies to everything done by a big office.

2121. And also you have to answer to Parliamentary criticism?—Yes.

2122. (*Mr. Gibb.*) I gather that you advocate the keeping separate the making of contracts and the supervision of the execution of contracts?—Yes.

2123. And that you commend the system of placing the duty of seeing a contract carried out on the Receiving Department as soon as the contract is made?—Yes.

2124. As part of that view, do you think that any intermediate inspection during the progress of works should be undertaken by officers of the Receiving Department, instead of officers of the Contract Department?—Yes.

2125. But that the Contract Department should have available officers for keeping themselves in direct touch with the trades of the country?—Yes.

2126. By visiting the contractors' premises, and keeping themselves up to all questions of sources of supply, the capacity of works, and so on?—Yes.

2127. As regards intermediate inspection, do you see any danger from employing the inspector who is to finally inspect for the intermediate inspection where it may be necessary?—No, I cannot say that I think there would be any great danger; practically the only thing to be feared would be fraud, and I do not think there is very much danger of that.

2128. And against the possible risk of fraud, you have the fact that in the final inspection, the information gained during the intermediate inspections may greatly assist the judgment of the inspector?—Yes, it greatly assists him no doubt.

2129. In fact, he has had an opportunity of seeing the finished article in various stages of its career, and is therefore better able to pronounce a final judgment?—Yes, I think that was done in several cases, if I remember aright, especially in the cases of guns. I do not know whether they were exactly resident inspectors, but they were very much at the works at Elswick and other places.

2130. The view as to the Contract Department placed before us by some witnesses is that it is useless and obstructive; your view is that it is not useless, and ought not to be obstructive, is it not?—Yes, you will find that any branch which has to exercise a check over another branch will always be considered obstructive, that is the natural tendency.

2131. Whilst I suppose the Contract Department, being engaged always in buying, develops a natural instinct to buy cheaply?—Yes.

2132. No one who is engaged in buying can resist the temptation to make a good bargain?—Yes.

2133. Whilst, on the other hand, the technical officer always engaged in construction has a tendency perhaps to some extent to disregard price?—Yes, you get the two currents of opinion, and if they are properly brought together, no doubt they act wholesomely.

2134. One instinct has to be checked and controlled by the other?—Yes.

2135. And you cannot have that check and control in one individual as well as you could have it by

dividing the duty between two individuals in two departments?—That is my view.

2136. When you speak of a natural and legitimate tendency of the Director of Contracts to look after the interests of contractors, I understand your view to be that the Supply Department would naturally attach the greatest importance to the particular case in hand, where perhaps there was some irritation at delay, whilst the Contract Department would look to the permanent and general interests of the Government in buying?—Yes, I think the Director of Contracts perhaps appreciates better the difficulties of the contractor and the case of people entering into contracts which they fail to carry out, though not by their own fault.

2137. And his general experience of dealing with contracts would give him the knowledge needed to look after these matters?—Yes, if he is an intelligent man it ought to do so.

2138. (*Mr. Mather.*) When you were gaining the experience you have just detailed to the Committee, were you then acting as Quartermaster-General or as Under Secretary of State?—I was neither, I was holding a civil appointment, Director of Supply and Transport.

2139. Would that office correspond to the office of Quartermaster-General?—When we made a reform and I was abolished, my duties were handed over to the Quartermaster-General, except the financial portion of them, which went to the Financial Secretary.

2140. During that period had you any experience of the relations existing between the Inspector-General of Fortifications and the Director-General of Ordnance and the Contract Department?—I used to hear of them.

2141. But you had no personal care of anything in connexion with those departments?—No, not at that time.

2142. You have described a very happy state of things as existing between yourself and the then Director of Contracts; but you occupied a position of supreme control, he and you were not equal co-officials of the War Office Department were you?—Yes.

2143. But you were superior to him in this respect that you often finally decided in case of dispute?—No, I did not decide. I took it up to the Surveyor-General.

2144. Within certain limits, of course, but I understood you to say that you would invite the Director of Contracts to come to your room and discuss with him certain points in relation to a certain contract, and give him ample opportunity of criticising your judgment as to a particular case, and that sometimes you benefited very much by his opinions, but at other times you decided for yourself?—No, I did not decide. I stuck to my opinion.

2145. And therefore over-ruled him?—Well, he either gave way or we took it to the Surveyor-General.

2146. Then your official relations were such that there was perfect equality as to authority?—Quite so; he was independent of me and I was independent of him beyond the fact that we had to work together.

2147. Bearing in mind the views you have expressed, and applying them to the officers I have named, the Inspector-General of Fortifications and the Inspector-General of Ordnance, you are aware those Departments are scientific and technical in their character, are you not?—Yes.

2148. And that the efficiency of the Army to a great extent depends upon the way in which all war materials are manufactured at the factories under the War Office, or purchased from outside contractors. Any lack of quality or imperfection of any kind might very seriously affect the defences of the country?—Yes.

2149. We have had it from both those departments that they have been seriously interfered with by the system which now prevails in the department of the Director of Contracts, that some work they have ordered by the Director of Contracts is carried out by persons whom they do not approve of; and they appear to have very little power of control in deciding who shall work for them, and who shall eventually supply the material they require to manufacture their various articles from?—Do you mean that the Director of Contracts forces on them contractors they do not wish to have?

2150. It is not a question of enforcing in a dictatorial way, but the relations between those re-

Lord
Haliburton,
G.C.B.

17 Jan. 1901.

spective departments comes to this, that a great amount of friction is set up because the military officer considers he is not supplied with all the materials he requires, or they are not carrying out his wishes with regard to something he may have expressed his opinion on, and consequently the service suffers?—That is practically a complaint as to the control which is exercised over the general business of the War Office; there ought to be someone in this office who can make the departments do their duties properly and harmoniously.

2151. In connexion with this particular matter you mentioned that the Under Secretary of State, who sits here I presume day by day as the permanent official of the War Office, should be the solvent for all difficulties that arise amongst the departments here?—Yes.

2152. And that all questions arising out of differences of opinion may be settled by him without delay?—Yes, of course they are not bound to accept his decision; they can go to the Secretary of State for War.

2153. Are you aware that in the Admiralty no such powers are given to the Director of Naval Contracts as those enjoyed by the Director of Army Contracts. All the scientific appliances for the Navy, especially all running machinery and apparatus of a complex character, are ordered direct by the Controller of the Navy, and do not come through the Director of Contracts at all?—Yes.

2154. Consequently he has a much simpler duty to perform, has he not, in ordering only those articles which are of current necessity?—Yes, I do not quite see why, if he is supplied with all the technical specifications required, the contract should not be made for those things by a department which is in the habit of making contracts.

2155. He does not pretend to supply the technical knowledge required; the departments take the control of supplying themselves with the articles to which I have referred to, but that does not apply to the contracts for the Army?—No.

2156. Do you think if the duties were prescribed by written instructions, such as exist at the Admiralty, it would facilitate very much the smooth working of the Contract Department with the other departments?—I was under the impression that they have regulations on the subject.

2157. That appears to be rather a moot point?—I have not looked into it lately, but certainly if they have not got regulations they ought to have.

2158. Your general opinion, I presume, is that there would be no difficulty in working the Contracts Department as at present constituted, with all the other departments responsible for the manufactures, and also the warlike materials to be made throughout the country, if the personnel of those departments were desirous of working harmoniously?—Yes, that is so. There is one point I did not mention when you asked me about departments dealing with their own contracts. The result of that would be that we should have numbers of people on behalf of the Government going into the market buying the same sort of article independent of each other and competing with each other. That would be the great evil of not having a Contract Department. All the departments want stores very much of the same nature—stores which are at the foundation of all these things—and if you had four or five different people going into the same market at the same time without communication with each other, you would be bidding against yourself.

2159. (*Chairman.*) I believe that was the system at the Admiralty prior to 1869, and considerations of that nature led to the changes there, and to the buying being thrown into one department; was not this the case?—Yes, I believe so.

2160. (*Colonel Sir George Clarke.*) I think the office of Master-General of Ordnance was abolished in 1855?—Yes.

2161. That was a military office, was it not?—It had a military head to it.

2162. As regards the supply of Ordnance stores to the Army, I have always heard it was regarded as a satisfactory office?—Very.

2163. Then subsequently to the abolition of that office, what happened was this, was it not, the Master-General was succeeded by a Surveyor-General, who it was originally intended should be a soldier, and that

gentleman was responsible for the purchasing for the Army generally. Then the Surveyor-General's office was turned into a political office; then the Surveyor-General's office was broken up and divided, but all the purchasing power was turned over to the Financial Secretary; is not that so?—Yes. I do not know that it was quite made into a political office, but they could not get a soldier who was suited to the office who could get a seat in Parliament.

2164. Then practically the theory that a great central contract department should be formed, and be under a political official, is a modern theory?—No, because the Master-General of Ordnance was head of a great department and in Parliament.

2165. But he was always a soldier?—He was always a soldier, but there were three others in his office who were also in Parliament, and some of them were civilians.

2166. But the Master-General himself was invariably a soldier?—Yes.

2167. I suppose the purchasing powers which are now delegated to local officers, in your time were much more limited than they are at present?—Yes, they have been extended.

2168. And the contracts made for you being supply contracts, would be mostly of a comparatively simple character?—Yes, they are not very complicated stores, but it is very important to have them good in quality.

2169. You said, I think, that several wars occurred in your time. Was it not then occasionally necessary to make direct purchases in order to meet the direct requirements of the Service?—Very seldom, I think; I think we did on buying animals in South America and elsewhere. We sent out officers to buy them; we could not make contracts, because we had no people to deal with there.

2170. I gather you said a Central Contract Branch would have rather more knowledge of business than the technical heads of departments would have, but surely that would necessitate something like a grouping in order to get more knowledge as to the materials, commercially and otherwise, in each group. It must be very difficult, must it not, for anyone to pretend to any sort of knowledge when he deals with such an enormous variety of stores as the Director of Contracts does?—The Director of Contracts does not deal with the stores further than the specification he gets, he is supplied with a specification of what is required, and he is the technical maker of contracts for those things; just as you might employ a solicitor, who would not necessarily be a man with technical knowledge of the thing he was making a contract about, but who would have technical knowledge of contract making.

2171. Then do you regard him rather as a person who simply conducts business, without any special knowledge?—No, not without special, but without technical knowledge; he ought to have special knowledge of the trade.

2172. Is the Director of Contracts now under the Permanent Under Secretary?—Yes, everybody is under the Permanent Under Secretary for the purpose of working the office—not in the details of his business.

2173. His direct head, I take it, is the Financial Secretary?—Yes.

2174. And, therefore, he has a sort of dual allegiance?—No, his allegiance is entirely to the Financial Secretary, but all papers which have to go up to the Secretary of State have to go through the Permanent Under Secretary.

2175. In securing harmony in the office to which you have alluded would the Permanent Under Secretary have sufficient authority over the Director of Contracts to secure harmony?—Yes, he and the Financial Secretary together would settle any question unless there was some very litigious person to deal with, then it might be necessary to go up to the Secretary of State.

2176. (*Mr. Gibb.*) In the ordinary course would the matter go to the Financial Secretary from the Director of Contracts through the Permanent Under Secretary?—No—direct; it would not come to the Permanent Under Secretary, unless they could not settle it in their own department.

2177. (*Sir George Clarke.*) I gather that in your time you looked upon the Director of Contracts as a person to assist you in every way, and not to over-rule you?—Yes, he had not the power of over-ruling me.

Lord
Haliburton,
G.C.B.

17 Jan. 1901.

2178. The Director of Contracts is, is he not, the protector of the contractor?—That is one, and a very important one, of his functions.

2179. And would not that attitude sometimes militate against the general interests of economy to the public?—Not if he was an intelligent man, and capable of filling his position.

2180. You would not think it the function of the Director of Contracts to propose that the quality of such an important thing as the material for soldiers' clothing should be reduced in order to meet the wishes of the contractor, would you?—No, but it might be his duty to represent it. If a contractor came to him and said, "I cannot get this particular cloth, but here is something, I think, equally good," it would be his duty to bring that to the knowledge of the heads of departments concerned.

2181. Is the Director of Contracts himself supervised by any external authority in such a way as to bring home his responsibility?—He is supervised by the Financial Secretary; he acts directly under him.

2182. You spoke of any form of check being resented, would not the resentment rather depend on the nature of the check applied?—No, it might depend a little upon the way in which it was applied.

2183. I gather, rather, that the harmony, which you describe, arose from the fact that when you were right you invariably insisted on carrying your point?—That was the result, not the cause, of the harmony.

2184. If the Contracting Department was now decentralised into groups of stores there would not be any danger of competition in the market, would there?—I do not understand your question.

2185. If Ordnance stores were grouped into one thing and supplies into another, and there were two or three Contract Departments, there would not be any danger of competition?—They use very much the same stores in the Ordnance and Commissariat.

2186. (*Colonel Miles.*) Are the stores of the Ordnance and Commissariat identical?—Yes, some of them—ropes and wood, and various kinds of things.

2187. They are all Ordnance now, I think; Ordnance stores and engineers' stores may clash, but I do not think Ordnance and Commissariat clash. I think there are very few stores which would clash, and those would be, I think, engineers' stores?—The engineers' stores and Ordnance stores must be of the same class; but quite apart from the fact of whether they are or are not the same class, I consider it is a good thing to have a Director of Contracts. In a very big business like the business of the Army it is a very good check, and if the officers cannot get on together they ought to be made to get on together—it is only a question of working it.

2188. You say the functions you held have passed now partly to the military, and partly to the finance departments?—The finance went to the Financial Secretary, and the rest of the business went entirely to the Quartermaster-General.

2189. All the duties with regard to the demand for stores went to the military?—Yes.

2190. Under your system you say you took a decision from the Surveyor-General of Ordnance?—Yes, and the Director of Contracts was under him.

2191. You were under him?—Yes.

2192. Therefore you centred in one important head—that was the Surveyor of Ordnance?—Yes.

2193. Therefore the obtaining of a decision was a matter of comparative simplicity; you went together to him, and obtained directly a decision?—Yes, but those decisions might very often possibly have to go up to the Secretary of State.

2194. If one of you appealed from his decision?—Yes, if you chose to press it.

2195. The immediate decision was given by the Surveyor-General of Ordnance, and if either one of you wished to press it, it could be carried on to the Secretary of State?—Yes.

2196. Of course you were in the same building with the Surveyor-General, and his room was quite close to yours?—Yes.

2197. Did you send out to watch the progress of contracts?—Yes.

2198. Did you do that with the consent of the Director of Contracts, or on your own volition?—The local officers did it.

2199. And you looked upon it as your duty without any reference to the Director of Contracts?—It was the business of the Receiving Officer to keep me informed how the contract was being carried out.

2200. And the Director of Contracts did not interfere with that in any way?—No; I never got information which affected contracts without letting the Director of Contracts know about it.

2201. Nominally has the responsibility for expenditure passed to the Military Department—the control of the vote?—Yes, the control of the vote.

2202. Do you not think the incentive for economy now that is so, is at least as great with the Military Department as with the Director of Contracts?—Yes, I should think it is equal.

2203. Do not you think it is more direct?—Yes, because the man wants to get the credit of his vote.

2204. If the power were vested in the Military Department it is said there would not be the same desire to take the lowest tender, and that that would put the public to expense indirectly; do you think there is much in that argument?—He would look at it as a choice of two evils, and take what he thought the lesser probably.

2205. He would be responsible for the vote, and would be comparing efficiency with expense?—Yes.

2206. (*Mr. Gibb.*) Do you think that there is sufficient publicity in regard to the purchases made by the Director of Contracts in this way: Great efforts apparently are made, judging from the evidence before the Contracts Committee, to keep secret the contents of a tender accepted as to price, &c.; do not you think if the price at which tenders were accepted were openly published it would be advantageous in assisting the Director of Contracts in dealing with contractors?—I imagine that is a difficult question. I have never had directly myself to deal with that, personally I should be in favour of publishing everything.

2207. Such a case as the Bennett and Underwood case, which came before the Contracts Committee, would have been impossible, would it not, if the transactions with the two nominal firms, which were really one firm, had been published, because the trade would probably have brought to the notice of the Director of Contracts the mess he was getting into?—Yes.

2208. The trade would have known, and probably very quickly have put the Director of Contracts right, and told him he was being tricked by an individual under two aliases?—Yes.

2209. Do not you think generally that the Director of Contracts, by publishing more than he does, would get the assistance of trade knowledge communicated to him by the trade becoming acquainted with purchases made by the Government?—I am not sufficiently acquainted with the discussions on that subject to be able to say. My own general impression would be that there is nothing like publicity for any business you have to carry on; but I imagine the contractors themselves do not like that publicity, whether in their own interests or those of the public I cannot say, but I would not like to offer an opinion whether it is an unnecessary or necessary thing to publish these things.

2210. We have heard of an instance of the Government purchasing copper at a price ranging from 2*l.* to 4*l.* a ton more than ought to have been paid. Do not you think if the price the Government were actually paying, and known to be paying, were published, the trade itself would soon check excessive prices?—Yes, I should certainly have thought so.

2211. If the Government were found to be purchasing an article at 2*l.* or 4*l.* per ton above the fair price, other competitors in the trade would soon jump in and try and get a share of these good contracts, would it not?—Yes.

2212-25. And thus more publicity would assist the Government, would it not?—Yes, it would bring in other contractors, no doubt.

The witness withdrew.

SIXTH DAY'S MEETING.

FIFTH DAY'S EVIDENCE.

At the War Office.

Monday, 21st January 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Sir RALPH H. KNOX, K.C.B., examined.

Sir R. H.
Knox, K.C.B.

21 Jan. 1901.

2226. (*Chairman*.) You have been permanent Under Secretary of State for War since September 1897?—Yes, about three and a half years.

2227. Before that you were Accountant-General from 1882 to 1897, and previously to that you had held a variety of positions at the War Office. I believe your total service at the War Office extends now to something over 40 years?—Forty-five years.

2228. You were never, I believe, during that service actually in the Contracts Branch?—No, never.

2229. But, of course, you have watched its workings and to some extent, as Permanent Under Secretary, you have guided it?—Well, the contract work does not come very much under the Permanent Under Secretary, excepting in what you may call very acute cases.

2230. That is to say, that if there was friction it would be the Permanent Under Secretary who would harmonise its relations with other parties?—Quite so.

2231. I take it the Permanent Under Secretary has to keep all the departments working together, to keep the teams pulling in the same direction?—Yes, and mainly to see that everything that goes before the Secretary of State is in a complete condition.

2232. May I ask what is your general theory of the Contracts Department. I mean, is the Contracts Department, in your view, limited to fulfilling in the best possible way the orders it receives from the Requisitioning Departments, or does it exercise any financial control as well?—Not in the ordinary sense of financial control, that is to say, it does not question the orders that are sent to it or the demands made upon it, though I have been assured by the Director of Contracts that, supposing anything extraordinary were to be demanded of him which he would be aware was not in the general allocation of the year, and which he would thus know to be a new service, he would, to make things safe, see that provision had been made for such extra and special expenditure.

2233. I was referring particularly to an answer which you gave before the Committee on War Office Establishments in answer to Question 1140, in the first part of which you say that the Director of Contracts simply executes orders. "When, therefore," you say, "an order comes for any particular service, which from his general knowledge of the Vote, is to supply ordinary articles required from time to time, he is not charged with the function of deciding whether there is money in that Vote or not; the officer who administers the Vote is held absolutely responsible that he shall not give an order without having the cash at his disposal, according to the best information that he has at the time, and the Director of Contracts looks to him and expects him to be acting within those limits." But then you went on to say, "It is the case, however, that if anything large or exceptional in the way of a demand were put forward, anything out of the ordinary course, the Director of Contracts would defer the order (especially if it were

" a departure from the programme set for the year), " and ask whether this had been contemplated and " proper financial approval obtained." It seems to me, according to the latter part of that answer, which tallies with what you said just now, that the Director of Contracts might, at his discretion, if he thought that there was anything unusual, question an order when it came up to him and insist upon its being explained to him that proper financial approval had been obtained, and, I suppose, that the money was there to meet it?—Yes, that is what I meant to be inferred from what I stated. He is not absolutely charged with the function of watching the provision, but as I have explained, he is a party to the allocation of the orders for the year which are provided for in the Estimates and practically cover the whole of the money provided in the Store Vote. If he were called upon to make a contract for any large service which might, according to his view, disturb the programme for the year, he would, to make things safe, enquire as to whether money had been provided for it, or special arrangements had been made to set aside other services which he may have contracted for, in order to provide the money for the expenditure.

2234. Would he not by that action be rather travelling outside his province?—Yes, that is why I said he is not distinctly charged with that duty; but we are all in this department supposed to be watchful over the public interest, and if anything is observed which has the appearance of being, I will not say irregular, but novel, we all take care in the public interest that the proper steps shall be taken.

2235. But while the Director of Contracts was satisfying himself that the proper financial authority had been obtained, and that there was money to meet the order, the order would be delayed?—It only means someone walking from this room, which used to be the Director of Contracts' room, round the corner into another room. That is all it means in the way of delay.

2236. *Pro tanto* it would mean delay, whatever the length of the inquiry was?—I should not say that it was a delay.

2237. And would it not, in your opinion, rather impair the responsibility of the officer administering the Vote, who is the primary person to see that the vote is not exceeded?—Not the slightest. I should say it was really the machinery for holding him responsible.

2238. Then would you say it was a useful thing that the Director of Contracts should act in this exceptional way from time to time?—The circumstances might still be very extraordinary, and I think that in the public interest it would certainly be wise of him to take that step and not in the slightest degree trenching on the functions of any other person.

2239. Is it laid down as part of his duties that he should have power to take that step?—No, it is not.

2240. How does it come about then?—Through the natural intelligence of the man.

Sir R. H.
Knorr, K.C.B.

21 Jan. 1901.

2241. But he has assumed that duty; it is not laid down as one of his duties?—It is not laid down that he is bound to do it, and if he neglected to do it, he could not be called to account.

2242. He has therefore himself, no doubt in the public interest, rather extended his powers?—I do not think so. He has, as it were, protected himself. I have no doubt you know how blame is thrown about at everybody through whose hands a transaction may pass if he has appeared to be asleep and not watchful. If I were in his position, I should certainly, as a matter of course, if I saw that there was anything out of the way, make inquiries to see that it was all right.

2243. We have heard it stated that the Contracts Department, from its general knowledge of markets and conditions of trade, is a force on the side of economy, and that, though any officer administering a Vote has a natural incentive to economy, the Director of Contracts, who is actuated by the desire to make the best bargain, has yet another incentive, and that these two incentives together result in a sort of compound force on the side of economy and efficiency. Would that be your view?—I think certainly the position of the Director of Contracts is one which does secure both efficiency and economy, and secures as well other results.

2244. You would not consider the interest of the requisitioning departments in economy, and the desire of making its money go as far as possible, sufficient to guarantee the public service without the co-operation of the Director of Contracts?—Certainly not. I think they do desire to make their money go as far as possible, but they have no objection whatever to spending more money than they have got.

2245. When you say that they have no objection to spending more money than they have got, what do you mean by that?—I mean if they think that the efficiency of the service, according to their view, necessitates a certain expenditure, there is no disinclination to ask for more money and press for more money, and probably they take some steps which might run the risk, at all events, of exceeding the money which has been granted to them for their services for the year.

2246. There would, I suppose, be no hesitation on their part in asking for more money, but there would be, I suppose, considerable hesitation about travelling outside their Vote; they would feel the responsibility of keeping within their vote strongly?—Well, of course, there is a desire to keep within, but I do not think there is any very great overwhelming, as it were, or binding sense which would avoid the excess of a Vote. Votes are constantly exceeded.

2247. Then I take it that what you mean is that the Director of Contracts might prevent those steps being taken which would almost commit the department to an excess on any particular Vote?—The Director of Contracts is not charged with that function, but he might do that; he might draw attention to the danger of taking certain steps if he thought there was no money available; but it is really the function of the Financial Branch to check the demands that are made by the spending departments.

2248. What sort of steps could an officer administering the Vote take by which he would commit the department to demand an addition to that Vote?—He would give orders either to the Director of Contracts to make purchases, or he would give orders to the factories to make certain articles.

2249. But he would not give those orders if he saw that thereby he was going to exceed his Vote, without first having got authority to exceed his Vote, would he?—If he saw clearly that it would give rise to an excess upon his Vote, he would be bound by the instructions to ask for further power—that is to say, he is held responsible for it. But it is very difficult to watch the expenditure upon such a Vote as the Store Vote, and for that reason it is difficult for the man himself, for anyone, indeed, without considerable labour, to ascertain how he stands, but he would be certainly likely to take a sanguine view as to the extent to which his Vote would go if he were not held more or less in check by other departments, who would probably take the opposite view.

2250. But so far as regards knowing exactly where his expenditure stood for the moment, he could always get information from the Financial Department?—He could get the best information obtainable. Of course, he does not want to know the exact cash that is going

out, but the liabilities and the probability of their coming in course of payment during the regulated period.

2251. But having obtained the information, the officer administering the Vote would be bound by his responsibility so to regulate his orders as not to give any order that would exceed the Vote?—Yes, it would be his responsibility; he would of course be held responsible if he were to give those orders.

2252. And I suppose he would be called to account severely?—I do not know. It would depend upon what the result was; if it was found that there was money available elsewhere to meet some deficiency upon that particular Vote, and it did not throw the department or the Treasury into any inconvenience, I cannot say that there would be any great notice taken of the fact that the Vote was exceeded.

2253. You mean if there was a saving on another Vote which could be applied to that?—Yes.

2254. But that would be taking a considerable risk, would it not?—Oh, I have known officers take such risks.

2255. Do you think that the knowledge obtained by the Contracts Department with regard to markets and the course of trade is very valuable, bearing in mind that that knowledge seems chiefly to be collected by correspondence and through the interviews which the Director of Contracts has in his room with contractors?—I do not know that his experience is entirely limited, or ever has been entirely limited, to that, but much of his knowledge of the trade of the country is derived in that way, together with the study of the general sources of information as to the variety of markets. I believe every stock broker uses the "Financial Times."

2256. I do not think he uses the "Financial Times" much in order to arrive at the exact prices in the market?—No, but he knows the state of the markets, he knows the prices.

2257. I scarcely think anybody on the Stock Exchange would be much guided by the "Financial Times" in his operations?—But as to the report of the prices he could, surely.

2258. No, I do not think so for doing actual business?—Not?

2259. It is scarcely what I have seen?—At all events, the market prices of all articles are made known daily, or periodically, and I have no doubt he uses those sources of information as well.

2260. We have been also told that the Director of Contracts considers it part of the functions of his department that officers for him should travel about the country and actually investigate local markets and contractors' premises, although it has been admitted that this function has been discharged rather less than could be desired owing to the shortness of the staff. Would you view this function as a recognised part of the duties of the Director of Contracts' Department?—In considering the advisability of placing new names for important contracts upon his list, I certainly think it is of importance that he should have the power of inspecting the various factories and ascertaining, to the best of his ability, the power of the various contractors to execute the work which might be entrusted to them. I have known, on many occasions, that that certainly has been done, both by the Director of Contracts himself and his men—not the present Director of Contracts alone, but previous Directors of Contracts and by members of their staff.

2261. Do you think that the knowledge of the Director of Contracts of any particular market is likely to be as good as the knowledge of that market gathered by the department which is actually using the articles purchased for it?—Certainly I do. You see he is a constant buyer; he thinks of nothing else but buying, and he is constantly considering the information which necessarily comes before him from the tenders and so forth for supplies, and his mind is entirely bent upon it. It is not so with regard to the demanding departments. Of course, if you entrusted that duty to the purchasing departments, I have no doubt they would similarly be alive to being posted up completely with the fullest information with regard to the work; but that division of labour, I think, is not the right one.

2262. Do not you think that the purchasing department which had to use a rather technical article would be likely to know as much or more about the particular

market for that article than the Director of Contracts, who had no technical knowledge, and who would not test this article in any way by using it himself?—I do not think so.

2263. Then you would not agree with one view which has been placed before the Committee, that the Contract Department really is a superfluity, in so far as each particular department knows more about the goods it requires and uses than the Contract Department, and also has a sufficient incentive to economy in making its own money go as far as possible?—No, I entirely differ from that view.

2264. Would not the present system, however, sometimes be a cause of delay?—Of course, the system of obtaining your goods by tender is one which tends to cause delays as compared with going on the other side of the street and buying something over the counter, as it were; but I think, assuming the system of tender, that there is comparatively little, I would say really no delay, arising from the existence of the Contract Branch as the system for obtaining goods. But I am one of those who think that extraordinary circumstances must be met by special courses. If you were to frame your arrangements in consequence of something which has occurred during the recent—at least, the present strain, I may say—upon the department, and because here and there some things might have been obtained, not by the system of tender, but by direct purchase, more rapidly than by the ordinary process, I think you would be making a great mistake. But I do think that there were many occasions during the recent pressure on which to meet exceptional circumstances exceptional measures may have been from time to time required, and that, to save any delay whatever, because sometimes an hour was of very great importance, the system should admit of the departments, if they possibly can—if they see their way to it and recommend it—making direct purchases at once on the spot to meet a particular and pressing difficulty; but that need not disturb your ordinary and regular system of proceeding to make all your large purchases by means of the Director of Contracts in dealing with the trade of the country.

2265. Are you under the impression that friction exists between the supply departments and the Contract Department?—From time to time it exists, but it is generally a personal matter; that is to say, people vary in their temperament and dispositions, and some men will cause friction where another man will cause none whatever. One man is very often a masterful man, and wants to get everything into his own hands, and do away with all those necessary checks and controlling powers which exist in the Public Service for the good of that service, and men of that sort are very apt to give rise to friction; but other men, many of whom I have known, work as easily and simply and harmoniously with the Contract Branch as could possibly be desired.

2266. You would then regard the system itself as not calculated to generate friction, but would you rather regard the friction as the result of the conflict of two vigorous personalities, shall we put it?—Very much so. I think sound principles of administration necessitate a sensible and proper division of labour, especially when that division of labour in such a service as the Public Service also serves the purpose automatically of a check, however small, as between the different departments. Any system which hands over a business entirely to one man without the power of scrutiny and observance by other people is a bad system. Our contract system, I think, secures both objects: the purchasing departments are relieved of a considerable amount of trouble, and an officer is appointed whose whole duty is to gain experience of the supplying markets; and it also has that moral value of making known, as it were, to other persons the proceedings of the other departments. I think the Government service, if worked on any other lines, would be soon in a very bad condition.

2267. But possibly the system itself may generate a certain amount of friction on certain points?—Certainly. Where two departments are acting more or less independently, of necessity a time comes when there is a difference of opinion. That very difference of opinion is valuable, and of course requires some little discussion in order to make progress. But it does not arise often. But the fact that these two functions are in different hands is a very real security for the proper management of the Public Service.

2268. There seems, for instance, to be some doubt as to how far the Contract Department consults the purchasing departments as to acceptances of tenders and as regards the removal of undesirable contractors from the Contractors' List?—Well, just as I have said, that I should advocate some check upon the personal equation, so to speak, of the person who demands the stores, I think there should also be a check upon the personal equation of the Director of Contracts, and that all that the Director of Contracts does should be in consultation with the various important departments. I think that he should consult with them as to the enlarging or decreasing of his List of Contractors, and I think he also should consult with them as a matter of course, as to the acceptance of contracts, and I understand—I always understood—that is really a part of our system, that the Director of Contracts before accepting, certainly contracts of any dimensions, would consult necessarily the demanding departments and come to an agreement with them, or, in the absence of an agreement, submit the case to the Financial Secretary.

2269. Of course, if there is no agreement, it must be submitted to a court of appeal?—Yes, if there is no agreement, but in order to have a check upon the Director of Contracts (for I place absolute confidence in nobody), he should consult with the department demanding the stores, so that his action should be also open to criticism and observation.

2270. But we have had considerable complaints that that consultation does not take place invariably?—The system, as I have always understood it, was that consultation should take place. I can quite understand that in small matters it has not taken place, and that in the despatch required recently, probably it has been omitted in very many instances; but that is the system, and I think it should be very strictly maintained.

2271. The Chief Ordnance Officer at the Royal Army Clothing Department told us that he would like to be consulted as regards the acceptance of tenders for large amounts of cloth, but he was not consulted?—Of course, if the lists have been agreed more or less—more rather than less—with the various departments, it ought not to be a matter of dispute as between the two departments as to the acceptance of any one of the contractors upon that particular list; but I think there should be complete harmony, or at all events a decision of the Secretary of State where there is not harmony, as to the lists, and, further, the same as regards the acceptance of the tenders when a decision has to be made.

2272. Colonel Mulcahy also gave evidence as follows at No. 831:—"I should like to make my recommendation as to the allocation of that order, but the Director of Contracts rather objects to my doing so, because he says he considers it unnecessary. Both the inspecting officer and myself should have a good deal to say, I consider, on the allocation of orders." You would rather agree with Colonel Mulcahy, that it should be so?—I would consider that he should be consulted, certainly.

2273. Would it be a definite part of the Director of Contracts' duty to consult?—I confess I always thought it was a part of the system, and intended, as I said, to be as much a check upon the Director of Contracts as the Director of Contracts is upon the supply departments. There is one great advantage arising from this business being done in one branch. It has been stated, and I think it has not been contradicted, that the War Office is the largest buyer in the world, and it is necessary that the department should have, what you may call, a contract policy, that is to say, a policy in dealing with the trade in settling the matters which necessarily come up for consideration in such huge and important transactions; and you cannot secure the uniformity of that policy which is so important by an arrangement under which contracts are dealt with, and decided upon, and accepted by many different branches. It is only by placing them in the hands of one person and immediately under an officer in touch with Parliament (because it is extraordinary how Parliament interests itself in these matters) that you can have a uniform policy in dealing with those persons who supply us.

2274. I think the Committee would also very much like to have the benefit of your opinion upon another point in the present system. The present system, indeed, seems to have a sort of hiatus at one point: for

Sir R. H.
Knox, K.C.B.

—

instance, when an order is in progress it is a very usual thing in the ordinary business world for the person who gives the order to have someone to supervise and watch its progress, and give warning if there is a prospect of any delay arising, but, with the exception of particular orders at Elswick and Vickers', it does not appear that this is done with regard to Government orders?—No, I believe not, with the exceptions which you mention, namely, that there are in these large manufactories of guns officers permanently stationed to watch the progress, and test certain processes; but, of course, those are really the most important and most difficult dealings that we have; and, inasmuch as the articles themselves take an enormous time to manufacture, and a flaw introduced at any stage, especially an early stage, in that manufacture would practically destroy the whole two or three years' work, it is highly important that there should be men on the watch; but, as regards a contract for clothing or boots, or smaller things, I certainly do not think there is any necessity for men to go down and be constantly present in factories of that kind, though an occasional visit, I should think, was valuable, especially if it was ascertained that there was any delay. On the first delay, I should think, of the contractor, the first non-compliance with times and dates of delivery, it would be wise that the factories of such contractor should be visited at once.

2275. (*Sir George Clarke.*) Might I ask one question on that: Is it not the case that the officers who practically live at Vickers' and Armstrong's are responsible only for the tests of steel made there, and that they would not have any cognizance of, and they would not be expected to report upon, the rate of progress going on in the works. They are purely steel inspectors, I think?—They are. That is the duty which is imposed upon them primarily, but I think it is expected that they should have their eyes open and make us acquainted with anything that they thought was unsatisfactory in the way of the progress that was being made with the manufactures. Do they not really make reports from time to time of the progress of those guns and the extent to which progress with them is being made?

2276. I do not know. Their duties as laid down are as inspectors of steel only?—Yes.

2277. And they are therefore not in the same position as the Admiralty Surveyor, who practically lives at the Arsenal, and sends a sort of weekly report to the Admiralty on the progress of the work there?—No. I thought they did make reports as to the progress of the work. I should think it would be very little addition to their labour to do that. I certainly was under the impression that they did.

2278. (*Chairman.*) It would not be necessary to have supervision in case of all kinds of articles, no doubt, but I think the Director of Contracts has admitted a theoretical responsibility for being in a position to carry out supervision. In fact, it is hardly denied that the department has this duty, but has not been in a position to discharge it, and, in consequence, we have been informed that a proposal has been approved by the Treasury for the creation of two travelling inspectorships, mainly with reference to this particular duty?—That is the case—that it is contemplated that there should be technical people appointed to do this work. I have always thought myself that far the better plan would be, inasmuch as this is both a contract duty and, taking the stores as an example, a store duty, that the inspection should be a joint one, by a member from the Store Department or the Director-General of Ordnance Branch, and a member from the Contract Branch; that it should not be left to either one or the other solely, and that both branches ought to satisfy themselves as to the progress that was being made, and ought to be authorised to satisfy themselves.

2279. We have also been told that this demand for travelling inspectors really originated not in the department of the Director of Contracts, although he has, I believe, taken it up and approved it, but in the supply departments?—That is the demand for technical inspectors? The Director of Contracts himself has always thought that a member of his branch or he himself could go down and visit those works, and ascertain very satisfactorily from that inspection how things were going, and therefore there was, from his point of view, no necessity for asking for special inspectors. I am sure you have been told that the Director of Contracts has asked frequently for increases

to his staff, and has received very considerable increases, but yet not of that class; in fact, it was impossible to make an increase in that class which he required, capable of doing the inspection work, because a man would be no good without experience, and his experienced men were needed and have been needed during this last great pressure to supervise the enormous amount of work which has passed from the earliest hour of day to the latest hour of night through that branch.

2280. Are you aware that at the Admiralty this supervision of orders while in progress is done by the Requisitioning Department?—No, I was not aware of that; but I confess I certainly think they ought to have a hand in it; but I think it would be well that there should be a joint inspection of the two departments.

2281. At the Admiralty it appears that the Requisitioning Departments, who are in a better position to realise urgency, do discharge this duty themselves, although, in the case of wanting assistance and still greater pressure being brought to bear upon the contractor than they can bring, they do apply to the Director of Navy Contracts to help them; but the primary duty rests with them?—I was not aware that was the way they worked it, but I can quite understand their asking to have a voice in dealing with such a case as that, and that they should be parties to any inspection that took place.

2282. Would there be any objection, in your opinion, to putting the primary duty in the War Office upon the Requisitioning Department?—I think that the Director of Contracts should also have an opportunity of inspecting, and that it should be jointly done. I think the two men should go down, at the same time, one from one branch and the other from the other, and look into it.

2283. We had the Assistant Director of Navy Contracts before us the other day to explain how the system worked at the Admiralty, and he handed us in a set of Instructions to the Contract Department there kept up to date, and which (I think I am expressing the general opinion of the Committee) seemed to us admirably clear and comprehensive, but we cannot find out that any similar instructions kept up to date exist at the War Office?—No, it has not been the practice in this department to define in detail the functions of the various officers. I think there is a good deal to be said for it, although I am afraid I must confess, that where two departments are concerned considerable delay would take place before general agreement was come to as to the limitations to be imposed upon this branch and the other branch in their functions; but I believe it would be extremely valuable and might put a stop to that extraordinary desire to grab, which exists as between the different departments in regard to the work which they should do. I am afraid it is inherent in all official people to try and get hold of the work; that other people are doing under the impression, generally due to ignorance, that they could certainly do it better themselves. But, perhaps, if it was laid down in detail definitely that questions were not to be raised about these things, because of these rules that existed, it might be of considerable value.

2284. I think we gather from you, that, in your opinion, the Director of Contracts ought himself to agree with the Requisitioning Departments upon the acceptance of tenders?—Yes.

2285. But there seems to be an uncertain view on that point in the department itself?—Quite so. I do not think there ought to be any uncertainty of view upon such a point.

(*The Secretary.*) That point is laid down distinctly in the War Office rules of procedure.

(*Witness.*) That was my impression. It is certainly the rule and practice of the office, but I did not remember that it was so laid down.

2286. (*Chairman.*) But there could be no very great delay in laying down such instructions, because if any two departments disagree as to their limits it is not for them to settle it by process of exhaustion and wrangle; it is to be settled by higher authority?—Quite so; and as I have said, I think the Director of Contracts, as a matter of principle, requires just as much check, so to speak, as any other department. We are all checks upon one another, and that is a proper system.

2287. Once you have your instructions laid down in black and white by the higher authority, there would be no longer any question of grabbing or encroachment?—Quite so.

2288. Are you aware that at the Admiralty the Director of Navy Contracts deals with all supplies, except ships, which are taken charge of by the Controller, and works which are taken charge of by the Director of Works?—I understand that is the arrangement at the Admiralty.

2289. If the Admiralty precedent were followed here, and if the dealing with certain classes of articles—very technical articles, say, guns and ammunition—were taken away from the Director of Contracts, and given over to the Director-General of Ordnance, and if the works were also withdrawn from the Director of Contracts, as they are at the Admiralty, might not such a change, in your opinion, be workable and minimise friction?—Everything is workable. In any arrangement you may rely upon the staff of any department doing their best to carry out the arrangement, however wild or unsatisfactory, but I believe the change would be a very bad one.

2290. Would you mind telling us your reasons for thinking it bad, because a similar arrangement at the Admiralty appears to work all right?—I am glad you say “appears to work all right.” I have no doubt that you have read the Report of the Parliamentary Committee upon Public Departments (Purchases, &c.) of 1874?

2291. Yes?—They went into this question, and they deliberately recommended that the contracts for works should be taken away from the Director of Works and placed with the Director of Contracts. There were a great number of business men of considerable weight and importance, and ministerial men too on that Committee, and I can only say that I agree with them.

2292. I think I am right in stating that they strongly endorsed the separation of orders for ships. Seeing that those articles were very technical, they thought it proper that they should be detached from the Director of Navy Contracts; but as regards works, they said there was no similar principle to be urged for their detachment?—That is so.

2293. Indeed it appears that they had been originally detached when Mr. Childers made the changes, simply because the Works Department appeared to do its work well?—Quite so. We are never logical in any changes in the constitution of any department that I know of. We have always been illogical in our arrangements of departments in this office, and so far as I am aware we never get a uniformity of principle, because there generally happens at a particular time, as regards some branch, to be some particularly strong, masterful man in charge of it, and he has his way. I have no doubt that at the time the Director of Works was a very strong man at the Admiralty, and because he was a strong man he fought, and they said, “Do not let us bother about it, let him have his way; nothing probably will go wrong.” We have had exactly the same thing happen with reference to our Clothing Department here; for a long time that was allowed to go on, managed perfectly contrary to every other department under the War Office, simply on personal grounds like that, and very much for the reason you have just quoted: “Oh, things are going on very well.”

2294. But leaving outside the question of works for the moment, that Public Departments (Purchases, &c.) Committee did entirely endorse the detachment of such highly technical articles as ships from the ordinary Director of Navy Contracts?—Yes, it did; it made an exception with regard to ships. I am really not conversant with the Admiralty work in detail, but a ship is a ship, and a very big thing, and I can quite understand that no subordinate officer would be entrusted with the work of coming to any conclusion with regard to such a service as that, but that a big ship-builder of the country comes up and interviews the very highest people at the Admiralty, and comes to the conclusion that they are to get 800,000*l.* for such and such a job, and so forth. It is not a subordinate work at all, hardly a departmental work, but the biggest work, I suppose that comes before the Admiralty.

2295. But do not you think that the same principle which is observed at the Admiralty might justify the withdrawal from the Director of Contracts of such very

technical things as guns and ammunition?—No, I do not think so. The specifications, you know, are obtained in the greatest possible detail from the Requisitioning Department, and it is those specifications that go to the contractors, and they have power, if necessary, to make visits to the stores of the department to see the articles that are wanted. In many cases, they have patterns, they have gauges and everything supplied to them, and on that they make their tender, and it appears to me that that meets all the difficulties that may be supposed to arise from the fact the Director of Contracts never worked a lathe.

2296. I believe that there has been a recent change in the War Office, to this effect, that certain officers in the Accountant-General's Department have been partially detached from that Department, and placed with the Director-General of Ordnance to keep his accounts, and to keep him informed as to the progress of his expenditure; but these officers at the same time have a responsibility to the Accountant-General, to point out to him any irregularity or deviation from rule. As a matter of fact, they have a kind of dual responsibility like the Military Accountant-General in India, who is at the same time responsible to the Military Member of the Council and the Finance Member of the Council?—I think you have been misinformed as regards that. The responsibility of that officer is entirely to the Accountant-General.

2297. He is responsible for pointing out any irregularity, but he has a responsibility, as regards the Director-General of Ordnance, in keeping him posted as regards the progress of his Vote and the keeping of his accounts?—No, only as a part of the Branch of the Accountant-General.

2298. Quite so, as the Branch; he is planted out?—He is not planted out. He is contiguous to that Branch, and therefore it is more convenient; the Director-General of Ordnance, knowing that this particular gentleman is in charge of that work, gets the information possessed by the Accountant-General from that Department by sending to that gentleman.

2299. Instead of going through the Accountant-General?—Instead of going through the Accountant-General; the Accountant-General empowers him to give the information which is required by the Director-General of Ordnance independently—without consulting him. It is merely a statement of the facts which have been recorded in the Branch of the Accountant-General's Department. He has no allegiance to the Director-General of Ordnance, but he is available, and all the information in the office is available, to every other department.

2300. He has no allegiance to the Director-General of Ordnance, but the Director-General of Ordnance can go to him without going through the Accountant-General?—But that arrangement exists with regard to all the offices. If the Quartermaster-General wants to get the information, he goes to a gentleman in a similar position.

2301. (*Colonel Miles.*) He goes to the head of that Branch?—No, he goes to the head of the subdivision of that Branch, and is in constant correspondence with him. So, too, the Director of Works, if he wishes to correspond, corresponds with the person equivalent to that gentleman who affords the information to the Director-General of Ordnance for that Branch.

2302. (*Chairman.*) But if the Director-General of Ordnance wants information from the Accountant-General with regard to the progress of his Vote, it would have to be given him under the authority of the Accountant-General?—They all act under the authority of the Accountant-General, it would be under the authority given to him.

2303. He could not address himself to a clerk?—It is to the Principal of the subdivision.

2304. Looking at the analogy of what had been done with regard to those particular officers of the Accountant-General's Department, I was wondering whether, for instance, certain officers of the Contract Department, say, the officers who deal with the articles which the Director-General of Ordnance purchases, could, so to say, be detached and make their contracts for him, while at the same time being responsible to the Director of Contracts for pointing out any irregularities or deviations from instructions. May I ask whether, in your opinion, such a procedure would work

Sir R. H.
Knox, K.C.B.

Sir R. H.
Knox, K.C.B.
21 Jan. 1901.

well?—I do not think that it would work well. In order to fulfil the position of Director of Contracts, I think those people must be regarded as absolutely independent of the Supplying Branch; and so the whole value of the work of that gentleman who financially looks into the proceedings of the Director-General of Ordnance is that he is absolutely independent of that Director-General of Ordnance. Otherwise I should regard the system as absolutely rotten.

2305. (*Mr. Gibb*.) I gather from your evidence that you think that the practice of buying through a general buyer, the Director of Contracts, is better than permitting the purchases to be made by departmental buyers?—As a system; but I would, as I have stated, in emergencies allow exceptions to that rule.

2306. I understand you think that the experience that the Director of Contracts obtains by frequently buying articles enables him to buy better than a technical knowledge of the articles would enable him to do?—Of course, our purchases are not affected by any, in a certain sense, higgling of the market. The Director of Contracts does not go out and bargain or cheapen the article with the men. He has a system which he is obliged to adopt, a system of tenders, and he, I think, has all the information that is necessary to carry out that business very satisfactorily.

2307. But if the function of the Director of Contracts is limited to the mere clerical work of obtaining tenders, why could not that equally well be done by the departmental officer?—I think the buying should be made a separate function from that of obtaining the goods, to preserve the check upon the demanding department.

2308. If it is a genuine act of buying; but if you confine it, as you seem to do, to the mere clerical work of getting tenders, do you see much value in that being done by an independent officer?—Yes, I do. I think it is better that the man who deals with the contractor, and to whom the contractor looks, should be an officer independent of that department which demands the articles.

2309. Now, I understand you to admit that in the case of a ship, for example, the Technical Department ought to buy, ought to arrange the contract, and not the Contract Department?—Well, I do not know that it is the Technical Department that buys at the Admiralty. I think a ship is such a big thing that it is practically what we should call here Secretary of State's business, that it is done by someone who is over the Director of Contracts, higher than the Director of Contracts, and is a matter of Council and Board decision.

2310. You think that it is because of the enormous value of a single ship, and not because technical knowledge of the specification is required properly to arrange a contract for the building of a ship?—Quite so.

2311. And in the case of the War Office purchases, you think that none of the things now purchased by the Director of Contracts would be better purchased through the Supply Departments?—Certainly not.

2312. Would you apply that to cases where there is a very large amount of communication between the contractor and the purchasing authority as to the details of the specification?—I do not know that I quite follow you.

2313. Of course, there are some purchases which are easily made, the specification is known, and leads to very little communication between contractor and buyer?—Yes.

2314. There are other purchases, are there not, which, before the contract can be arranged, require a great deal of detailed communication between contractor and buyer?—Yes.

2315. As I understand, you would draw no distinction between those different classes of things, but would say that in both cases the Director of Contracts should arrange the contracts?—Yes, I would.

2316. Although, in regard to all the detailed discussion, he must necessarily pass it to the Supply Department, that is to say, act as a post office?—The Supply Department really provides the specification in detail. It would probably be the same specification as was needed by ourselves in our own factories, and it would be known to be a complete specification and absolutely exhaustive.

2317. But in regard to many things, no doubt a very great deal of personal communication is needed before

the contract can be placed, where the specification is a specification of a technical and important article?—Communications do take place, but if you go to Armstrong, or Vickers, or any of those people, and send them specifications, they are just as capable of understanding them as any one of our own officers.

2318. It is the fact, is it not, that a great deal of correspondence and communication does necessarily take place, and does take place, about contracts of that sort before they are let?—I do not know that it does.

2319. We have heard from other witnesses—Colonel Stevens, especially—that there is a great deal of communication of that sort, and that delay and difficulty occur by reason of its having to pass through the Director of Contracts?—I cannot see how the necessary discussions with an executive officer, such as Colonel Stevens, could give rise to delay with the Director of Contracts. The delay would then be really occasioned by his conferences with the demanding officer which would necessarily arise, whether the tender or bargain was made by him or by the Director of Contracts.

2320. But we have been told that the Demanding Department or the Inspecting Department is not allowed to communicate with a contractor until after the contract is practically let; the correspondence has to go through the Director of Contracts?—I cannot say that I am informed as regards that point, and I am afraid that any opinion I might express would not be of very much value, but I thought that the tenders were always made upon the specifications supplied. I know, of course, that after the specifications are supplied, our Demanding Departments are constantly tinkering at those specifications and making alterations in the things demanded, which is one of the great causes of the delays in supplying by so many of our contractors.

2321. You said you thought that the intermediate inspection during the progress of the works should be joint?—Yes, joint.

2322. Would you see any objection to permitting the Supply Departments to communicate with contractors and inspect progress at any time they please, and without reference to the Director of Contracts?—No, I think not. I think if the contractor is to be approached the Director of Contracts should be aware of it, and, at all events, should be able to arrange if any visit is paid, so that he should, if he wished, have a representative there.

2323. The Director of Contracts told us that he recognised no responsibility after the making of a contract until he received a complaint from the Receiving Department that the articles were not delivered in accordance with the contract?—That is, I believe, the ordinary course.

2324. The Ordnance Department told us that they were not allowed to do anything until the articles were tendered for delivery, or until the contract time had expired?—That I understand is the course at present, that is to say, if stores are not being delivered, a representation is made by the requiring Department to the Director of Contracts.

2325. But that being so, neither department has any responsibility between the date of contract and the contract date of delivery?—No, it is assumed that the man is working up to that contract.

2326. Although that may be, from the point of view of the ultimate satisfactory performance of the contract, the most important period of all, the watching of the contractor?—Yes, it is assumed that, the contractor's name being on the list, he is competent to do the work required of him, and that he would be honest enough to do his best to complete his bargain. We do not test the man's honesty or probity in dealing with us until we see signs of failure, but, as I say, I believe everybody wants occasionally watching, and contractors, perhaps, more and more every day, like everybody else, want more and more watching; and it would be a good thing to have people with their eyes open to see if they are dealing honestly with us or not, for honesty is at a premium.

2327. We have also been told by Colonel Stevens that contractors who were defaulting all round were having new contracts constantly piled upon them; and we were further told by Colonel Stevens of a case where 10,000 tent mallets were contracted for, they were not delivered at contract time, and yet another order was given for another 10,000 to the same firm who were in default, and disastrous consequences seem

to have followed?—I cannot say that I am acquainted with the details of that transaction, and, therefore, I think you should ask the Director of Contracts. I think I have heard something of the kind, but whether it is worth my stating what is hearsay I do not know, but some of these things that are demanded by the Store Department are of what I should call an absolutely eccentric pattern, and the conditions applying even to such mere wooden articles, which one would think might be made, especially in an emergency, of the ordinary pattern, are of elaborate design and of special wood. The mass of contractors in this country very wisely will not have anything to say to such orders. One man is at last tempted to take it, and he is the only man who will even say that he will make any effort to supply the article, and if he is the only man you must pile the articles on to him, although you may feel convinced that the supply will not be satisfactory.

2328. Does not that point to the desirability of putting the demanding or specifying department more directly into touch with the contractor than the present system admits of?—What would be gained?

2329. You were suggesting that the Requisitioning Department specifies unnecessarily difficult conditions?—Yes, but I think that could be represented to them by the Director of Contracts saying, "I go to the trade" and I find these people will not make these things; "you must make some modification." I believe he has done so and they in some cases have made modifications, but they look upon it as interference on the part of the Director of Contracts in their business; whereas it is simply an act of a man possessing some common sense.

2330. Supposing the Director of Contracts does not make that representation, and delays such as we have heard of occur in consequence?—But I know he has made those representations over and over again.

2331. Now the Director of Contracts seems to have objected to the Supply Departments communicating with contractors; do you consider that in doing so he has carried out the duties charged upon him or has he, to some extent, usurped an authority which does not belong to him?—Do you refer to any particular passage in the instructions which you have before you?

2332. No, it is merely the evidence we have that the Director of Contracts had objected to the Supply Departments communicating with contractors, although the Supply Departments considered that the public service would be benefited by their doing so in particular cases?—I think that it should be certainly open to the Supply Departments to communicate with contractors with whom a contract has been made, but it should not be behind the back of anybody; it should be known that they are communicating with the people with whom the Director of Contracts has dealt and to whom he has assigned the contract.

2333. But why not place the responsibility for the execution of contracts upon the Receiving Departments, leaving the making of the contracts with the Contract Department?—I think it should be done by them, as it were, in collaboration. As I have said, I think no contracts, especially for important things, should be concluded without the Demanding Department being consulted.

2334. That leaves a duty in two departments of a singularly vague and ill-defined character, does it not?—I do not think so.

2335. If it is the duty of neither to see to the execution, but partly the duty of each?—I think the division is very valuable. One may say that our Contract Department was constituted as the lesson of the last big war. It was set up in 1855, when, for the first time, the position was recognised. That system has worked admirably for 45 years; it is a system which the Admiralty, having tried the other system, adopted, and they use still. I believe that the division of labour in this way acts as a very valuable controlling power in this department, and I believe that any large variation from it would be very unwise.

2336. We have heard in the evidence a good deal of the inconveniences that have been felt recently from the working of the Contracts Department and also of friction that has existed in some quarters. Have you had any complaints with regard to these troubles and frictions?—I have heard of many non-deliveries of goods, which is more or less chronic, I believe that every large department of business at all times finds its

contractors very difficult to deal with; but the contractors themselves have great difficulties in dealing with their sub-contractors and so on, and delays, you may almost say, necessarily arise: there is a chronic state of it. But during this war, when the whole resources of the country were taxed to the uttermost, when everybody was wanting everything, you may say, all over the country, not the Government alone, but every large manufacturer, necessarily delays of that sort arise, and, I certainly believe, they were not in the slightest degree due to the faults of the system which exists.

2337. But we have had evidence before us which shows clearly that the Supply Departments were not allowed to purchase things required on an emergency without the routine being gone through by the Director of Contracts, with very unfortunate results?—I think that that is a fault which, perhaps, has arisen, if it has been the case, from too rigid an interpretation of the conditions under which the business is carried on. Local purchases are allowed as an ordinary matter of business throughout all the departments under certain circumstances; and under emergency, I believe, the officers of the Store Department may do anything at all that they like, and I think that, probably, in many cases the Store Officer was absolutely justified and right, to meet a pressing demand of importance, by adopting any course he liked which he thought would provide the necessary stores that were demanded; and all that the Director of Contracts could do, although he might have thought that he could have done just as well, would be to call upon the officer to make an explanation of it; in fact, the officer was bound to make an explanation in departing from the ordinary procedure, but he is perfectly justified in making such a departure, and all the Director of Contracts could require, and, I think, should require, is some explanation of his having adopted an unusual course, but a course which is contemplated in urgent services.

2338. The Director of Contracts seems to have gone beyond that. In the case of material required for mule harness, we were told that the Ordnance Officer, first of all, locally purchased the material and got through the work in hand satisfactorily. Then the Director of Contracts protested against that purchase; he insisted that the next contract for materials should be made in the ordinary way; the demand was then sent in on the 15th September; the contracts were placed on the 9th and 10th October for deliveries of material to be completed, according to the paper contract, in two-and-a-half months' time, the result of this action being that regiment after regiment had to proceed to South Africa with all equipment complete except its mule harness. That is at Question No. 684. There the Director of Contracts appears to have insisted upon the routine procedure with disastrous results?—I do not know the details of the transaction.

2339. But what I understand you to say is that you think he had no real power to do this—to insist upon material being purchased, through him, by tender?—He had the power to point out that this was a special and irregular proceeding, and if the other department differed from him he would have no power of deciding against that other department. The question would be reported for decision.

2340. Have you had any complaints from the departments between whom there was friction, that the system was not working well, and leading to unfortunate results?—I have heard complaints in several cases of delay, which delay has been represented as due to the necessity of going to the Director of Contracts. I do not think it has been proved that that delay was due to that.

2341. You have not dealt with the matter officially?—No, I have not.

2342. You have not taken it up to the Secretary of State?—No, it has not come before me in that way. But I heard a discussion in the presence of the Secretary of State of a number of such cases as those which you have been alluding to, and in that sense, I may say that I was cognisant of there being some of these complaints.

2343. We were told by Colonel Hildebrand that he did not appeal to the Secretary of State, because it was so difficult to reach him, and he mentioned a particular case in which he said he succeeded in reaching the Secretary of State after a year or two. Is there any procedure in the office causing any difficulty which would prevent the Supply Department getting a

Sir R. H.
Knox, K.C.B.

21 Jan. 1901.

prompt decision on any question they wished to raise?—I do not know of any difficulty at all. Every one of those officers has the power, supposing they do not get satisfaction from the branch that they are dealing with, and cannot come to an agreement with it, of sending on the papers by quite a different channel, so as to reach the Secretary of State or someone representing the Secretary of State.

2344. But is it the duty of the Supply Department, if they wish to raise a question of the sort we are discussing, to send the papers through the Director of Contracts, or would they send them direct to the authority to whom they appeal?—They have the power to do so through the Financial Secretary. If they did not agree with the Director of Contracts, and did not get satisfaction out of him, they would send it direct to the Financial Secretary.

2345. Not through the Director of Contracts?—They would probably send it to me. If anyone of those branches is not satisfied, they send the paper on to me, although it would not be my duty, at that stage, to deal with it.

2346. Would it be your duty to compose the differences if such difference existed?—No, the Financial Secretary would have to be consulted first, as being the head of the Contract Branch, the appeal being against the decision of his officer.

2347. (Colonel Miles.) But the appeals were submitted by the Finance Branch?—Ultimately the appeals were submitted by the Financial Secretary, that is to say.

2348. By the Financial Branch, I thought it was?—No, by the Financial Secretary. The Finance Branch cannot get to the Secretary of State except through the Financial Secretary.

2349. I thought the wording was that the submission of the appeal was by the Finance Branch?—That means through the Financial Secretary.

2350. (Sir Charles Welby.) But supposing that the Financial Secretary has already taken the side of his own officer, the Director of Contracts, in a case, and supposing the Inspector-General of Fortifications, say, is dissatisfied with that ruling, the Inspector-General of Fortifications has the right to go direct to the Secretary of State, there and then, without going through the Financial Secretary?—Yes, certainly.

2351. Which he could do without any appreciable delay?—Yes; I was assuming a case where the Director of Contracts and a branch was at variance. The first step is to go to the Financial Secretary as superior officer; no decision would be taken without the Financial Secretary being consulted. If they did not like the ruling of the Financial Secretary, then they would appeal to the Secretary of State and it would come to me.

2352. (Mr. Mather.) Referring to the last question which was put to you by Sir Charles Welby, surely, as the head of a War Office Department on the Civil Side, you would be able to settle many disputes between these two authorities without referring the matter to the Secretary of State? Are you not, may I ask, a superior officer altogether to the Director of Contracts?—In a dispute of that kind, which would certainly be important, if the Financial Secretary had expressed an opinion upon it, although I might see a *modus* of getting out of the difficulty and would discuss it, still, if the head of the Department, the Director-General of Ordnance or the Inspector-General of Fortifications, who are both of them very high officers in this Department, expressed a very strong view, if I could not talk them into what I thought was the proper view, they have the right to appeal to the Secretary of State to get his decision.

2353. But in a certain sense is not the Director of Contracts a servant of yours?—No, except that he may be supposed to be below me, because I am the channel of getting to the Secretary of State, and therefore can act for the Secretary of State in certain matters.

2354. But surely in all but matters of supreme importance you would settle any matter of difference between the two heads of departments?—Yes, but sometimes you get two people between whom it is very difficult to get an agreement. People are of different temperaments and different strengths, as I have described; sometimes you cannot compose their differences.

2355. Lord Haliburton informed us that in his experience in a similar department he was successful in adjusting differences that arose from time to time without going to a higher authority?—Of course I might be successful in the same way, if I saw there was any prospect of bringing the Financial Secretary and the Director-General of Ordnance to an agreement and that they might be satisfied with my decision upon the matter. But I should regard a case of that kind as one which, if they wished it, the Secretary of State should be invited to decide himself.

2356. Have you, as a matter of fact, settled any disagreements of that character between these two departments?—No, I cannot say that I have had any such cases to settle.

2357. Have you passed any such cases on to the Secretary of State?—No, I have not. I think when it has come to that the Secretary of State has generally got to hear of it and he has had a conference about it, and that is what did happen in this case.

2358. But have you been requested by those in dispute to pass on to the Secretary of State any matter for settlement?—Yes, I have passed on cases to the Secretary of State, but they have not been very numerous. I know that in several instances, when the Secretary of State has heard of it—because he hears of these things directly from the heads of departments (the Director-General of Ordnance is very frequently with him, and he hears of them in that way without the paper having been, as it were, officially brought before him)—the Secretary of State has had a conference, at which I have been present, between the Director of Contracts and the Director-General of Ordnance.

2359. We have had it in evidence, I cannot give the reference at the moment, but the case was brought before us, where it took more than a year to get it up to the Secretary of State by those who complained of the action taken by the Director of Contracts?—I should like to see those cases.

2360. I thought if you had known that you might have been a rapid means of communication?—I cannot say that I recall such a case.

2361. You have defended very loyally, and with absolute conviction, I am sure, the present system and the present relations that exist between the Director of Contracts and heads of departments; but the impression conveyed to my mind is that you defend it chiefly upon the ground that it is a check upon the expenditure of the Annual Votes. You have not indicated that there is any benefit arising from the Contracts Department at the War Office to the country, from the point of view that the Director of Contracts can in any way be responsible for the quality of the materials supplied to the various departments?—No, that rests entirely upon the inspection. The specification is sent to the contractor; the contractor is bound to supply in accordance with that specification, and the demanding department is absolutely responsible for testing those things when they are delivered, to see whether they are what they want, and in accordance with the specification.

2362. Therefore, Parliament must rely entirely upon the heads of departments for having the full money value for all that has been contracted for by the Director of Contracts?—Certainly.

2363. Then, as regards this check and counter-check of which you have spoken many times during the last hour, in what sense may Parliament rely upon the Director of Contracts' Department being a check upon expenditure?—They are not. I think they are a check upon the absolute disinterestedness and probity of these contracts by means, not merely of the establishment of the Director of Contracts *per se*, but of the fact that he has to settle those contracts in communication with the other departments. It secures an above-boardness, so to speak, in making these contracts, and you get rid of the personal equation arising between the contractor and the demanding department, and you also get rid of the personal equation between the Director of Contracts and the contractor, and I think it is of very great importance that that system should exist.

2364. I cannot see how the personal equation is affected between the Director of Contracts and a contractor. With regard to the heads of departments using an official at the War Office as the means of

communicating their demands to the sources who undertake to supply, I can understand the financial operation of using the Director of Contracts as an agent, as a very considerable controlling influence upon the heads of departments, because they have to justify openly the recommendations that they make, inasmuch as the Director of Contracts must report his proceedings to the Financial Secretary, and they are eventually looked over, I presume, by the Accountant-General's department; but I fail to see how the check operates in the other direction?—Upon the Director of Contracts?

2365. Yes?—If the rules of procedure be adopted, the Director of Contracts himself cannot act without the concurrence of, and consultation with, the demanding department, and unless there is distinct, as it were, collusion between those two high officers, nothing which should be objectionable or questionable could be transacted.

2366. We have had very strong evidence to the effect that this Contract Department as at present conducted interposes a very great obstacle to the rapid execution of work, and even to the rapid delivery of materials required for the execution of work. Your evidence to-day does not weaken, I think, those statements, at least to my mind, except in this direction: that you make a claim that it is better to have, and in effect you say it is better to have, some financial check, even at the loss of some little time, and perhaps efficiency, rather than run into difficulties which irresponsibility would lead to?—I believe there is no loss of time arising from the system itself. I think you would find that there is a very sufficient explanation of that, and that the Director of Contracts will be able to meet most of these complaints that have been made. But it is a more elaborate process to obtain things by tender than for the Supplying Department to decide that it is an emergent service and go off to so-and-so and Co., and buy the things straight off. It is out of such things that terrible scandals may arise, and have arisen, and I think that a system which provides that things should be bought in a different way is a remarkably good system, and a successful system, though I admit that under a strain such as we have had lately, it may have been necessary to buy things as corruptly as you like, so long as you got them.

2367. To most business men, I think, the power possessed by the Director of Contracts would appear to be unique in any business transaction. You have already said that his department is the largest purchasing department in the world, not only in amount, but, I presume, in the vast variety of articles and goods?—Yes.

2368. It would be, I think, difficult to find a parallel in ordinary business life with a system of the kind carried out at the War Office, in which one official should have the entire disposal of contracts amounting to this vast sum of money over such innumerable quantity of articles; and as the departments at the War Office appear to be as clearly definite as they are at the Admiralty, I cannot understand why you should advocate the possession in the person of one official of all the power to obtain the supplies to the Army of every kind, when at the Admiralty they have discovered an enormous advantage by dividing the technical departments from those dealing with the ordinary goods of consumption?—Well, I am not aware of the advantages that have been so derived by the Admiralty. It may be that they have discovered certain advantages, although I understand that it is only ships and works that are the exceptions to the general rule.

2369. We had it the other day from Mr. Hall, the Assistant Director of Navy Contracts, that they did supply goods for ships—all the goods that were not connected with running machinery; they supplied a considerable quantity of that sort of goods, such as valves and taps and articles made wholesale by special manufacturers, but that the purchasing of all the technical part—and it was purely the technical part of the ship, of which there is a very great deal more than the actual ship and main engines—was under the Controller of the Navy?—We are illogical, no doubt, in dealing with our business in the various departments. People differ in opinion. I hold to my opinion, and I am glad, when I look through the names of the Committee which sat in 1874, to see that I am in accordance with a very large number of extremely sensible and strong men.

2370. Of course, it is a quarter of a century since 1874. I suppose it is quite possible that new times demand new measures, and new men a new system, so that it would be possible, probably, to alter the relations between the Director of Contracts and the heads of departments in the War Office, if that would facilitate the transaction of business, and lead to efficiency and promptitude, without in any way removing the check which I think is the chief point you refer to in the system as it now exists?—Yes.

2371. The chief value you now attach to the system as it exists?—Yes; I say it is a very good division of labour, and that that division of labour also acts as a very excellent check upon the operations of the demanding department.

2372. We have it, on the contrary, in evidence that it makes a good deal of unnecessary labour, and that methods could be adopted without impairing the check upon which you set so much store, whereby that unnecessary labour might be altogether avoided?—It is undoubtedly the case. I have felt myself, and no doubt everybody has felt it, that if a man *facit per alium*, he always thinks that the other man is delaying, and that he himself would have done it in one-tenth of the time he is taking. I ask a man to ascertain some very trifling information for me in my room—my Private Secretary, it may be; I want it immediately, and while I am sitting waiting in my chair for perhaps five minutes I think the man must be wasting his time, that he is delaying somewhere, or has stopped to talk to someone, because I am there doing nothing, waiting for that information. That is a feeling that comes over everybody. You have only to hand the thing over to someone else to do for you, and you think he is taking an inordinate time to do it.

2373. Then, in other words, you believe that what is, is best, and that the present system is satisfactory in all respects?—I say that I believe the present system is an excellent system and works admirably, but I do not wish to stick to it absolutely, it cannot be a cast-iron system which allows of no exceptions to meet exceptional circumstances. I think that under the pressure which we have had during this last year it may have been advisable even that the demanding branches should have made more special purchases without the interference of the Director of Contracts, or without adopting the tender system. I think, however, that the contracts should be made in concurrence with the Supplying Branch; and that the lists of men on the Director of Contracts' books should be more or less added to or diminished in consultation with the demanding department. I think with those modifications (and experience has shown that some understanding should be come to with regard to them), the system, as it exists, is admirable.

2374. (Sir George Clarke.) I suppose I may take it that it is quite clear from the War Office regulations that the head of the spending department is responsible that no contract should be made which would not be covered by his Votes. The regulations make that quite clear?—That he is held responsible for not spending more money than is placed at his disposal, certainly.

2375. And if he did place a contract outside his Votes, he would be discovered by the Accountant-General without doubt?—The limit of expenditure is not so rigidly laid down as would be inferred from what you state. The principal contracts are settled for the year, but during the course of the year new demands, unexpected demands, may come up, and they have to be dealt with by the Director-General of Ordnance, who may give an order as to which he may fairly consider, "It is worth the chance, it is worth running the risk. I do not think things will be so bad; I imagine my Vote will come out all right." It is quite impossible, dealing with such enormous demands and such a number of contracts, to know to an exact figure the condition of the Vote at any time. The Director-General of Ordnance would rather take, as I have said, a sanguine view as to how he stood, whereas those whose official duty it is to be watchful the other way would take the view probably that it would not do to be sanguine under the circumstances.

2376. Then would it not be very difficult at any time for the Director of Contracts to become aware that the Spending Department was expending outside its Vote?—It is not his function really, as I have said, to see that it is so, although from general watchfulness, supposing that he was told to enter into a contract for 50,000*l.* worth of goods, he would as a matter of common sense,

Sir R. H.

Sir R. H.
Knox, K.C.B.
21 Jan. 1901.

I should call it, ask the finance people whether they thought it was all right.

2377. Do such cases as the Director of Contracts calling attention to the Spending Department going outside its Votes often occur?—No.

2378. You could not probably give us an instance?—No.

2379. Is there any independent check or review exercised on the operations of the Director of Contracts himself?—The checks upon him are the necessary proceedings with the other departments, that is to say, he ought not to be able to do anything which other departments are not as well aware of as he is himself.

2380. There have been some instances brought before us in which the operations of the Director of Contracts certainly did not lead to economy. Would such cases be brought to the notice of the Financial Secretary?—Not unless the complainant (who would be the Demanding Department, I suppose) represented them. I think that that check upon him should exist, that if his system, which is the system recognised by the department, has failed in a particular instance to get the things as cheaply as they can be obtained, it is incumbent upon the department responsible for the supplies, if they know it, to represent it to him, and, if they think advisable, to his chief.

2381. But the Director of Contracts has over him no individual and no force which is continually impelling him towards economy?—He has the branches for whom he supplies; they are supposed to impel him towards economy; they are watchful upon the contracts he has made.

2382. Then it is the using departments which are supposed to keep and fix his mind upon economy?—It is assumed, of course, that our system of going to open tender is the best system; it may or may not be, but it is recognised generally as the best system for obtaining things at the cheapest price; it is the system that the House of Commons has recognised, they are jealous of any other system, and I think that the Demanding Department should be the watcher, as it were, of the Director of Contracts, that he is doing the best for them that he can do.

2383. Then you think it would be the duty of the using or obtaining department to draw the attention of the Financial Secretary to any lapses from economy on the part of the Director of Contracts?—Yes, if they saw that the system which the Director of Contracts is bound to adopt is not producing the best results economically, I think they are bound to report; in fact, I know, of course, and you know, that there are not only these sources of supply for a very large number of articles, but there are the factories which make endless articles; in fact, they make a very large number of articles that the trade cannot make at all, and never has made, but it is open to the Director-General of Ordnance, at any time when he has a supply before him, to say, "I believe I can make these things better and cheaper at the factory than you can get them in the trade." He is a party always to the allocation as between the factories and the trade, and it is open to him to suggest that method as against obtaining them by ordinary tender through the Director of Contracts.

2384. Then may we take it that the check upon the Director of Contracts is exercised, or should be exercised, only by the using departments, and that there is no other check upon him?—There is no other check upon him.

2385. Would not a big providing department, like that of the Director-General of Ordnance, have a very strong motive to get the best and cheapest article in the shortest time?—Generally, I think, that it is so. Their views as to what the best article is, and the best market, of course, might not be absolutely right; but, according to their views, I think certainly they might be looked to for that.

2386. It has been admitted to us, I think, that the Director of Contracts has not got full information of rejections or delays under the present system. We have been told, for example, that contracts have been given out at higher prices to contractors already in large arrears. In such cases would not the using department, which was aware of all the rejections, and had suffered from them and from delays, be in a better position perhaps to form a just idea of the competence of a contractor than a central contracting department?

No, I think that a department which was in that position should, as a necessary part of the system which cannot work unless there is that communication between them, point out what they regard as at fault, and should look to the Director of Contracts to see that it is set right. I have no doubt that he has an explanation to give, which you have not heard, of his proceedings with regard to these matters, but I think if there was proper communication between the two departments, anything of that kind which might have occurred if it could be set right would be set right.

2387. You have said that an independent check upon all departments of Government is absolutely necessary, and that is my very strong opinion. Would a central Reviewing Department, reviewing all contracts, meet your requirements?—I believe that the present system is better than that. I think a mere reviewing department, from the fact that it has no results to bring out and is charged with no function except mere review, would be likely to drop into desuetude, and not to be supported by people in authority.

2388. Is not the whole principle of audit one of review, and does not that operate as a very salutary check?—It does, and it does not. It depends what the condition of the accounts is, and so forth. But the Audit Branch here is also the Accounts Branch, which is the branch which is responsible for bringing out the results of the expenditure of the year, and it is in the process of doing that that it discharges the duty of audit.

2389. If the principle that the Contract Department is to be equipped with technical inspectors is adopted and acted upon, will it not lead, in the long run, to considerable expense and to rather a duplication of officials?—I think that in normal times the staff of the Director of Contracts Branch and the staff available in the Director-General of Ordnance Branch is sufficient to provide the men necessary for visiting from time to time these various departments. I do not think, myself, that there is any necessity for the creation of additional officers.

2390. May not this new departure in the obtaining of these two new inspecting officers lead on a good way, because they will only be experts in two or three things perhaps, and more experts will be wanted; and may not a whole separate inspection department tend to be built up?—I think so; I think the technical man can be very easily obtained from the Director-General of Ordnance Branch, and better obtained, because an officer will be nominated who is acquainted with the special product. You must have one for clothing. The Ordnance man would not do for the clothing; but the Director of Contracts would look into it from a general and administrative point of view, and trade point of view; and I think the branch in normal times could do it. Of course, the Director of Contracts Branch has been much increased to meet the strain of the war—more than doubled—trebled, probably. But for this higher duty of course you want higher men and experienced men, from his point of view. This branch, at present under the extraordinary pressure of buying all the stores that have had to be bought, naturally could not spare any of its men to look after this inspection work, as it is called; but I am certain there would not be constant employment for these two men to do the required inspection, and that in normal times the Contracts Branch and the Director-General of Ordnance Branch can produce the men necessary to do all in the way of inspection that is required.

2391. In fact, you think that all the technical inspection that is required is already provided for, or can be provided for by the departments of the Director-General of Ordnance, and the Quartermaster-General in other cases?—Yes.

2392. Might we not draw a line, is not a line capable of being drawn, between the duty of purchasing stores and the duty of supervising contracts for a barrack or a fort; is there not rather a sharp dividing line between such duties?—I do not see it. It is a different kind of trade, of course, but I do not see that in principle there is anything different, so far as the arrangement of the matters with the contractors is concerned.

2393. The Director of Contracts has stated to us that bills for payment under his contracts are referred to the Accountant-General for audit, and has also told us that he considers it would be better if that audit was

conducted in the Contracts Office; do you agree in that?—That is a case of grab on the part of the Director of Contracts. I should say certainly not.

2394. I think that we are right in assuming that all papers which have to go to the Secretary of State go through the Permanent Under Secretary of State. Lord Haliburton told us that, I think?—It is not absolutely correct. The Financial Secretary has the power to submit things which especially belong to the business for which he is responsible direct to the Secretary of State for approval. But if it is a question of difference between a department and so on, that is a bigger question, and that question would come through me. I mean that there are certain contracts—these very things, for instance—that the Financial Secretary might think were even too big for him to deal with without the Secretary of State, at all events, being aware of it; in that case he would send the papers on to the Secretary of State direct and not through me. But if a difference arose as between the different Military Branches, as we call them, and the Director of Contracts, the Financial Secretary having expressed his opinion, it would come through me.

2395. There was one case brought to our notice in which the Director of Clothing appealed to the Secretary of State against a direction from the Financial Secretary and the Director of Contracts. In a case like that of a disagreement between two departments, would the matter be laid before the Secretary of State by you?—The Clothing Department, as I think I have already said in my evidence, was at that time very curiously and wrongly constituted, and what happened under those circumstances cannot be a guide to any proper procedure. Everything was rolled up in the hands of the Director of Clothing; he was his own auditor, he was his own supplier, he was a great deal his own contractor, and everything else; nobody knew what he did, and there was no way of anybody informing himself as to what he did; so that I think anything that is to be gathered from what happened there cannot be a guide to what ought to happen.

2396. I was taking it rather as an instance of a difference of opinion between two departments having to be referred to the Secretary of State?—It was not that. That was a case in which the Director of Clothing at that time was under the Financial Secretary,—nobody else having anything to do with him. No one controlled him; there was no examination of his accounts outside him; he was absolutely self-contained; and he did not like a decision that was given by the Financial Secretary and said: "Well, I am responsible for this business, I think that it is of very great importance that the Secretary of State should decide this question himself," and the Financial Secretary being spoken to in that way and appealed to to get a decision from the highest authority upon the subject, naturally sent it on.

2397. I have only one more question to ask you. In cases where differences between departments occur, and those differences have to be referred to the Secretary of State for decision through you, would both the plaintiff and defendant departments be present at the interview with the Secretary of State when the case was adjudicated upon?—Only if the Secretary of State wished it. He might decide upon the statements they had made upon the papers. But if one department were represented, certainly the other should be.

2398. (*Colonel Miles.*) I understand that you think, on the whole, that the present position of the Director of Contracts tends to produce efficiency and economy?—Yes, I do.

2399. With regard to efficiency, you would not put it that the Director of Contracts produces efficiency actually in the stores he buys,—in the better class of stores?—No, he cannot; he does not select the stores; he does not decide upon the stores.

2400. And he is not an expert?—The demanding department states what it wants, and decides, when the Director of Contracts has made the arrangements for the supply, whether they are the things he wants.

2401. And he secures efficiency in what particular way, may I ask?—The efficiency of the Service,—the general efficiency of the Service,—and that it is carried on on sound and proper principles. It is not a question of the article. It is assumed that the system we adopt of tender by the firms best known to be likely to make good supplies will produce the best and cheapest article.

2402. With regard to economy, the way that he would promote economy would be by accepting the lowest tenders; is that how economy is attained by him as against the departments making the contracts themselves?—He does not necessarily accept the lowest tender. It depends. The men who are on the list send in a tender of what they can supply; sometimes they cannot supply the whole thing; sometimes we know that their resources are not so complete as we should like for them to take the whole of the order, and, in that case, the order is spread over the various persons tendering, of course governed by the cheapness. He should not go to the highest except in very exceptional circumstances.

2403. How precisely then do you mean that he secures economy?—The arrangement is that he buys the cheapest things that are to be obtained which will satisfy the departments.

2404. That could be done by the departments themselves, could it not?—Yes, the whole thing could be done by them. One man might try to do the whole work of this department; but it is necessary, in order to transact any large business, to divide the labour. This is an excellent division of the labour, and it secures objects which are of paramount importance, I believe.

2405. I think you said that in some cases the Military Departments did not show the same anxiety for economy as the Civilian?—No; I think they are mainly influenced by efficiency, and their own notions being adopted.

2406. I think you will agree that, in some branches the Military Spending Departments are not quite satisfied with the present financial arrangement by which they can watch the expenditure on the Vote?—They have not the record exactly in their own office, because it is impossible in any system of account, not to make that division of labour; there must be a division of the account work from the other work, and they may not be aware—they cannot be aware—except in the roughest possible way, of how they are spending their money. They can of course take a rough note, or even a business-like note, of how much liability is incurred in a big way against the credit that has been given to them. In that way they may form a rough idea. That has to be done, of course, in a thorough and systematic way to watching the liabilities; but of course the actual payments they do not make and they do not record; that must be done as a matter of business elsewhere, and they cannot know without getting the best information available from the Accounts Branch how their money is going.

2407. But my question was whether any of the branches are dissatisfied. Have you heard any dissatisfaction expressed?—These various departments, of course, not appreciating sound principles of administration, would like to have the whole account and audit entirely under themselves, without any external watching at all. The whole of our system is directed against that sort of thing.

2408. Appeals to the Secretary of State are of very rare occurrence; you would not say they are of frequent occurrence?—You mean appeals in consequence of difference of opinion, squabbles, disagreements?

2409. In this particular case the first process of appeal is to the Financial Secretary; then, if the military element wish to carry it further, they appeal to the Secretary of State, do they not?—Yes.

2410. Such appeals to the Secretary of State, speaking generally, are not of frequent occurrence; they are certainly rare?—I do not think they are very frequent.

2411. (*Sir Charles Welby.*) But that frequency or infrequency rests with the heads of departments?—Yes.

2412. It is a fact, is it not, that the functions and responsibility of the Director-General of Ordnance have been increased very largely during the last few years by the addition to his department of the Ordnance Factories and in other ways?—Yes; the supervision of the work done in the Ordnance Factories has been taken away from the Financial Secretary and added to the Director-General of Ordnance.

2413. And should you say that that has constituted a very large addition to the burdens imposed upon him?—I really do not know how far the work comes up to him, and how far the Chief Superintendent of

Sir R. H.
Knox, K.C.B.
21 Jan. 1901.

Sir R. H.
Knox, K.C.B.

21 Jan. 1904.

Ordnance Factories submits to him the details of the administration there, but I do not know that it has increased his daily labours very much.

2414. I did not speak so much of his labours as of the responsibility upon him through the concentration of functions in a single officer?—Yes, it has increased that very much.

2415. I suppose that a break-up of the Contract Department, which would involve the transfer to the Director-General of Ordnance of the great bulk of the work now done in the Contracts Branch, would add considerably to that concentration of responsibility and functions?—Yes, I should think it would.

2416. Then, do you think that, apart from the question of principle, there is a practical objection to this further concentrating of responsibility in the person of an officer who is already very heavily loaded?—I certainly think there is. As I have said, division of labour is necessary in order to do a large amount of business satisfactorily, and I think the present division of labour is a very satisfactory one, and that if a change be made the tendency will be to overburden, even from a labour point of view, the other officers.

2417. (Mr. Beckett.) Your evidence leads us to think that you are entirely satisfied with the present system; but do you think that a system can be entirely satisfactory which is regarded with so much dissatisfaction by a great many of those who have to work under it?—I think that is almost an evidence of its excellence.

2418. That is a paradox?—It is doing its duty. I am, and have been all my life, one of the most unpopular officials at the War Office, and I consider that is the greatest compliment. I look upon it as a testimony that I have been doing my work of financial control thoroughly well.

2419. Just now, referring to the case which was mentioned by Mr. Gibb with regard to new harness, you said that you were present at a conference with the Secretary of State, when a number of such cases as those alluded to were discussed. I gather from you that you think it is inevitable that such cases should arise?—I think that under the strain which has existed in our supplying the Army—the unthought-of strain—with an unthought-of amount of supplies and equipments, necessarily certain delays have arisen in obtaining stores from the resources of the country, but that that delay has not arisen from the fact that the Contract Branch carried out the business of making the contracts.

2420. You say also that in an emergency such as has arisen lately, which I suppose is responsible for the breakdown of the system, in certain cases the rules should be departed from—that there should not be a cast-iron system, but that the system should allow of certain deviations from it. Who is to decide when an emergency arises, and who is to sanction those departures from it?—An officer, if he is worth his salt, has to take the responsibility upon his own shoulders and say, "I am going to do this because I feel convinced of the urgency of the thing," and stand the risk of being found fault with or not; and any man who is not prepared to do that ought not to be in any position of responsibility in the Service.

2421. You say, with regard to reviewing, that a system of reviewing would have no results to bring out. I confess I do not quite gather what favourable results the present system brings out which would be lost under a reviewing system?—I believe that the system that we have secures absolute spotlessness in the distribution of the work over the trade of the country. I believe that any other system will not secure it.

2422. You used the term "spotlessness," and you have referred before to the fact that under the present system everything is above board; do you gather that there would be any probability of corruption creeping in if the Director of Contracts were eliminated?—Certainly, I do.

2423. Now, the Director of Contracts in his evidence said that he must be guided by the proposals put before him, and that he cannot go into every detail for himself; does not that argue that the heads of departments are as well qualified to make contracts as the Director of Contracts himself?—They are qualified to make the demands for the things that they want. I think that is all that that shows. I do not say that they are not qualified to make the contracts themselves—anybody is qualified with a little experience to

do any work of administration; but it is necessary to have proper control and checks, and no Secretary of State could enter this office and take that chair with any feeling of safety if he did not know that the machinery of the office was so arranged as to prevent scandals and abuses and collusion creeping into the enormous business that has to be done in the Contract Department.

2424. And you do not think that that would be sufficiently secured by a reviewing system?—No, I do not think so.

2425. You would give the Director of Contracts more power?—I would follow out the present system modified, if it be a modification, by an arrangement that there should be more co-operation as between him and the various departments for whom he purchases, and also contemplating that in emergency all sorts of things might be done.

2426. Then I gather from what you said just now, that you think there might possibly be more co-operation between him and the departments than is the case at the present time?—I am only accepting what has been stated, namely, that tenders have been accepted without conference with the other departments. I think that such conference is most necessary, one object, as I say, being to destroy the personal equation of the Director of Contracts; and so with regard to the men whose names are retained in the lists: it ought to be a matter of consultation and decision by the Financial Secretary when modifications have to be made in that direction.

2427. Then it is your opinion that the Director of Contracts should follow the lead and carry out the wishes of the heads of departments as far as possible?—Provided that they comply with what I should call the general contract policy of the department as regards general principles in dealing with the trade.

2428. But that general contract policy may be a good or a bad policy, and it has been described by Colonel Stevens as follows:—He says that under this policy the contractors do not come up to time, no penalties to speak of are imposed, and there is a disposition to continue contracts to defaulters. Do you consider that that is a good policy?—That is the opinion of one gentleman in the whole of the Service. I do not know how far it may be shared. But if you take the case of fines on contractors it is a most difficult, abstruse, and puzzling question, as you will see if you read the evidence and opinions of that Parliamentary Committee of 1874; and it has remained a difficult question from that day to this, how contractors are to be dealt with when they do not come up to time, or comply with the conditions of their contracts. I think it must be obvious to most people that they cannot all be dealt with in the same way, but that you must deal with them according to circumstances. In the case of some men it would be simply a farce to think of fining them; other men you may deal with by purchasing in default and so forth; but I verily believe that in the strain to which we have been put, and which has raised most of these questions here, most of the contractors have done their level best to supply everything that has been wanted by the State; they may have been sanguine in their forecast of what could be done. No contractor with the division of labour that there is in this country depends upon himself, he depends upon other contractors to supply him with a very large amount of what you may call the components of his own business. The materials and everything all depend upon the supply from other people, and I believe that the contractors have been doing exceedingly well, and that they have done all they could to help us, and I do not believe that any re-arrangement of the work would have brought about any better results.

2429. The Assistant Director of Contracts informed us that, in his opinion, his office was not obstructive enough; is that your opinion?—I cannot say that I am sufficiently familiar with the daily business of the Contract Branch. I do not believe them to be obstructive. I believe that they are as keen and zealous to do the business of the department as men can possibly be. They are extremely intelligent and extremely well informed, and it may be that because they have a function to perform they have strained their duties here and there excessively in the direction with which they are charged of managing the work. I can hardly give a meaning to the words "obstructive enough," but I think it means that this system of tender having been adopted by the Government of the country as the most

open and best method of obtaining goods for the Service, they should protest, more, perhaps, than they do, that that system should be adopted for every purchase that is made. They may, under those difficult circumstances, have exceeded what was right, and it might have been better, perhaps, for them to have made more concessions than they have made.

2430. One more question. Do you not think that it would be advisable that a system of rules should be laid down for the direction of the Director of Contracts such as now prevails in the Navy?—I should like to see a system of rules similarly laid down for everybody, because, as I say, I believe they would have a salutary effect in preventing people overstepping their functions.

2431. (*Sir George Clarke.*) Might I ask one more question with regard to the matter of "spotlessness": May we take it from you that you think that spotlessness is a special attribute of the present system, which could not be obtained in any other way except by that system?—Taking your own business in the factories, for instance, I believe that there is so much to be done in arranging purchases, arranging when they are to be made, what particular article shall be used, and so forth; that, not necessarily the men who are in chief charge of the department, but others in lower grades would be in a position to make demands for certain articles and so forth at certain times to suit the contractors. In a large factory, of course, there is more irregularity of supply than elsewhere. I think that there is plenty of scope for malpractices.

2432. As regards the pre-arrangement of times for demands with contractors, would not it be completely

possible at the present time? You have said, I think, that the subordinates at the Arsenal might arrange with contractors to make demands at special times which would be convenient to the contractors; would they not have all that power now, if they were not looked after by the superintendents?—Well, I think under a system whereby contracts were made, for instance, down there instead of here at Headquarters, there would be so much more opportunity for arranging matters with the contractors as against the present system, that it would be most unwise to transfer, for instance, the contract business for stores for the factories to the factories themselves.

2433. Supposing it were not transferred to the factories, but was administered by a small department under the Director-General of Ordnance, would there be any reason to suppose that it would not be quite as spotless as the present system?—I do not see what is to be gained by such an arrangement as that, and you get rid of all the local advantages, so to speak; all the same references would have to be made, and I should look upon the change as one which certainly would not be a change for the better.

2434. As regards the Works Contracts at the Admiralty, I am sure you would not mean to intimate for a moment that there was any reason to suppose that those contracts which are made direct by the Director of Works at the Admiralty are not quite as spotless as those that are made for the Inspector-General of Fortifications by the Director of Contracts here?—Well, I think the present system, our system, secures a greater purity.

The witness withdrew.

Colonel Sir GEORGE CLARKE, K.C.M.G. (a Member of the Committee) examined.

2435. (*Chairman.*) You have been Superintendent of the Royal Carriage Department since 1894, I believe?—Yes.

2436. Could you tell the Committee if there have been any cases of considerable delay at the Arsenal?—The cases of delay at the Arsenal are of almost daily occurrence in every branch of material supplied, and the delays in the supply of material frequently lead to extreme difficulty on the part of the Manufacturing Departments, who have to make promises not only to the Director-General of Ordnance, but also to the Admiralty, the Colonies, and to India. I might say, perhaps, as I do not think the evidence has been given before, that the system at the Arsenal is a little different to that of the other what might be called providing departments, that is to say, that while the principal Ordnance Officer at Woolwich dealing with ordnance stores can go straight to the Director of Contracts to procure the stores that he wants, in the Arsenal we have a large Store Department, which department holds reserves of stores to a certain extent, and it also does all our business in connexion with the stores, so that it is that Store Department which is the intermediary between the superintendents of factories and the Director of Contracts. In other words, there are two large clerical departments interposed between all the manufacturers and the purchase of 10L of material for their manufacture. That is a special matter with regard to the position of the Ordnance Factories. That Store Department now, under the improved position of the Arsenal, gives every possible assistance to the superintendents; its offices are only a few hundred yards from ours, and we can get at it at all times, either personally or by telephone or by writing; but all communications between me and the Director of Contracts have to go through that other department, and then become the subject of a separate correspondence. As a rule, nothing that I might write myself as to the state of the stores, as to rejection, as to any great dissatisfaction I feel with stores coming in, would go direct from me; all I write would be copied, perhaps a little altered and perhaps a little softened down, and would be then sent to the Director of Contracts. If it would not tire the Committee, I could give two or three typical cases of delays in the supply of material for manufacture; they would only be typical of a very large number of cases which happen every day.

2437. I think the Committee would be very much obliged if you would do so?—In November 1897, I was called upon to build an experimental field carriage

a 15090.

which was very urgently wanted for competition with carriages made by other persons. I was pinned down to the specification of that carriage, and what I wanted was 50L worth of nickel steel. I recommended a particular firm, because I had had previous experience that they could supply that steel: I sent in my demand on the 30th November 1897, recommending this firm specially, and saying it was most urgent. The tenders were ultimately received, and it was then found that the Director of Contracts had put that small order, urgently wanted, out to open competition, and that Beardmore did not tender.

2438. Might I ask if you know, when that requisition reached the Director of Contracts through the Store Department at Woolwich, whether it bore on the face of it that the demand was urgent?—I could not tell you that.

2439. You would send it, marked urgent, to the Store Department?—I would send it to the Store Department, and it would pass on from them.

2440. And the presumption is they would transmit it, marked urgent?—And the presumption is they would repeat it as quickly as possible.

2441. (*Mr. Mather.*) Did you say it was urgent?—Yes.

2442. (*Chairman.*) They would send on your note that it was urgent?—Of course. The point was that as the thing was so trifling and it was urgent, I recommended that a special purchase should be made, instead of which it was put out to open tender. No one tendered who could supply it at all, so that on the 23rd December I again recommended the firm. On the 17th and 28th January I urgently pressed that the supply might be hastened. Ultimately, a tender from the firm, whom I had recommended in the first instance, was accepted on the 4th February, with a promise of delivery in 14 days, and then I had to point out that even if that promise were fulfilled, which it was not quite, the undertaking as to the time in which I had promised the carriage could not be complied with. My view, however, is if what I had asked for had been done, I should have got my small quantity of steel at once; the carriage would have been completed, and the effect on the public purse would have been exactly the same. In a case of special steel manufacture like spiral steel springs, used for running up guns, which are difficult to get and are very important, I sent up a demand on the 20th August 1897 for 250 of them, for 6-inch mountings.

Sir R. H.
Knox, K.C.B.

—

Col. Sir G.
Clarke,
K.C.M.G.
—

Col. Sir G.
Clarke,
K.C.M.G.
21 Jan. 1901.

2443. What is the cost of them?—From 37s. to 40s. apiece. On the 20th August 1897 I recommended a particular firm for that contract. The tenders came in, that firm tendered, and a second firm tendered, but the lowest tender was that of a third firm. On the 29th September, I agreed to the order being placed with the third firm, but as I had had no experience of their manufacture, I recommended that a sample spring should be submitted before proceeding with the bulk. I may say that I had private information which assured me that the firm could not carry out the order, but I could not inspect their works to see, and could not, therefore, when I had no evidence, personally, say straight off that the firm's tender should be rejected. The firm submitted a sample spring. I said it was unsatisfactory, and asked a representative to come round to see me. He did so on the 30th December. On the 8th January I had made it all clear to him; then supplies began to come in; some on the 27th June 1898, and some on the 1st July 1898, which were all rejected. Then the firm requested another interview, at which I pointed out all the defects; then the matter passed into a wrangle between myself and the firm, who said our tests were not properly made. I pointed out that the springs were not in accordance with the drawing or specification, and that our test was what we found necessary to meet the requirements of the Service, and could not be relaxed. They still contested the point, and I replied on the 14th September 1898, that they were not right, and could not be accepted. The wrangle went on some time; ultimately the firm delivered another 12 springs on the 21st October 1898—they were all rejected. I then recommended the whole order should be cancelled, and divided between the other two firms, and I said it was evident that the firm were unable to manufacture springs suitable for gun mountings. The delay was becoming very serious, as the whole of the mountings had been issued, and there were no springs available, and complaints from the Admiralty, I said, would certainly arise. Contracts were then placed out, divided between the other two firms, and ultimately they came in, and I got the last spring on the 19th September 1900. The time taken up in that business was three years and one month. Then there is another case of steel springs required for 15-pr. carriages and 12-pr. carriages, which were wanted—for the adoption of my new brake; and three firms tendered—Firms A and B for one, and Firms A, B, and C for the other. I was asked if Firm B's tracing was satisfactory, because his tender was lowest. I replied, "Yes." His tender was accepted. I acquiesced in that allocation, because I had no proof that he could not make springs. I could have sent a man to the firm, if I had had the power, who could have told me the next day whether they could make these springs or not.

2444. (*Mr. Mather.*) Who would prevent you doing so?—It is against the regulations to do so. Between the 22nd February 1889 and the 27th January 1900, they delivered 125 to meet an order of 40, and 123 of those were rejected, that is to say, they were continually sending them in, and they were all rejected. I wrote on the 20th November 1899 concurring in giving the firm a final chance, and the Director of Contracts wrote to him, saying it was very unsatisfactory. That paper was passed to me, and I said, "Noted, but this is causing great inconvenience and delay in the issue of field carriages. It is useless to try firms who cannot make springs. This contract has already been running for more than a year, and it supplies a good instance of the way in which manufacture is obstructed."

2445. (*Chairman.*) In both those instances you had not sufficient definite knowledge, I understand, on your own part to represent to the Director of Contracts that it was impossible, and only a waste of time, to give the orders to these particular firms?—That is precisely the case. I know all about making springs, and I knew a good deal about this firm, and I was morally certain that they could not do the work; but, unless I could have sent a man to look at their works, or had positive evidence, I would not like to put that on paper which might possibly injure a firm.

2446. But apart from the question of sending a man to look at their works, so long as the system of tenders which is laid down prevails, whether the Director of Contracts should be in existence or not, as you had not sufficient knowledge to debar these particular contractors, you would be more or less bound to accept

these lower tenders?—Certainly, unless I could have positively said from experience, which I should have been prepared to quote, that they could not do the work.

2447. But your contention is, if you had power to inform yourself as regards the capacities of these manufacturers, you would have found out at once?—I could have found out the next day. The upshot of this case was that on the 15th December 1899, 12 months after the date of my demand, Firm A—the firm I recommended in the first instance—was accepted for 137 springs in default at an excess cost of 1s. 3d. each, which, I believe, was to be recovered from Firm B. Firm A delivered those springs. In another case of round steel which was very urgently required—a less complex material—that was demanded on the 20th February 1900, and the demand was marked "most urgent." On the 27th March the Director of Contracts passed the tenders to me through, of course, the Store Branch, and asked: "Will a certain firm, delivery 40 hundredweight, beginning weekly, in 30 days, suit?" I replied that it appeared to be satisfactory, and might be accepted. The order was placed with the firm. The deliveries began to come in; there was rejection after rejection, and ultimately a representative of the firm came to see me, and told me that the material which was defective was not made by him, but by another firm; and the upshot was that I have been already more than 10 months trying to get that round steel, and I have not got it yet. I do not think it is any good giving more instances, though I could go on with them. What we complain of is that we have not sufficient power to satisfy ourselves that a contractor can do a special thing like steel springs, or like the other thing I mentioned before; therefore, we have to acquiesce in a contract which we may know cannot possibly be completed.

2448. As regards the system, in the first place, your real position is to pass on a demand to the Store Branch at the Arsenal?—That is so.

2449. Would the Store Branch transmit it directly to the Director of Contracts, or would it pass through the Director-General of Ordnance?—The Store Branch would send it direct to the Director of Contracts; there is no intermediary.

2450. Does the Store Branch hold all the materials necessary for the factories?—It holds certain reserves and it receives material; but, of course, material urgently required—castings, and those kind of things—go straight into the shops, though the paper getting them out of the Store passes all the same. It is assumed that they have been in. The paper transaction takes place in every case; we draw and complete the necessary papers, but the material is delivered directly into the shops in those cases.

2451. (*Sir Charles Welby.*) I was a little puzzled by the way you put the case of the firm accepted for round steel. You told us that the firm's contract was referred to you, and you accepted it?—Yes.

2452. And what you said afterwards you objected to was that you were obliged to acquiesce in the acceptance of a contractor whom you might have reason to believe was unsatisfactory?—Whom I had reason to know could not make the thing; I could raise no objection to the contractor.

2453. In what way are you obliged to acquiesce; why is it not open to you to put forward the strongest possible protest?—I would not like to put it forward unless I could bring up something against him. I do it when a contractor has made a bad delivery on previous occasions; but if a name comes before me, as to which I cannot say in the past "he has failed," I do not like to say a man cannot do the work.

2454. But if you had good reason to know he could not do it, is it not only within your competence, but within your duty, to represent that to the Director of Contracts, and to warn him?—I should say, certainly not, unless I had positive evidence; one does not like to put things on paper without positive evidence, and a mere impression, or a mere knowledge that in all probability a man has never made these special things before, and, therefore, would be unlikely to be able to do it—a mere impression like that—I do not think justifies one in saying he could not do it.

2455. That seems to me to disclose an unsatisfactory state of things, but I do not see how that could be remedied, even supposing a contract were made by a

Contract Branch of the Director-General of Ordnance Department; he would still, from that contract-making Branch, have the case referred to you?—Yes.

2456. And in that case, if you had reason to know that the contractor was unsatisfactory, you would be obliged to put your reason on paper?—No; in that case I should send a foreman into the place at once, and he would find out.

2457. At present, are you precluded from doing that?—At present I am precluded from doing that.

2458. (*Chairman.*) Could not you represent to the Director of Contracts that, at any rate, you had some doubt as to the capacity of this or that firm, and ask him to satisfy himself?—I suppose it could be done, but I have always looked upon that as no part of my duty.

2459. But you could ask the Director of Contracts to watch, could you not?—He would not have a single man in his branch who could tell.

2460. But he could ask you for a man, could he not? That would be better, would it not, than the very large delay involved in getting these orders executed?—Yes.

2461. (*Mr. Mather.*) Surely you have sufficient authority to say, "I shall not give my consent to the acceptance of that lowest tender until I have sent down an expert from my department to assure myself that the work can be done by that contractor efficiently, and in the time required"?—I think one has that power, but it has never been exercised and it is rather a strong step to take.

2462. Strong against whom?—Against the habits of years. The custom has been that this is the Providing Branch.

2463. But if you have the right to do it, it is not a question of hurting people's feelings; you are determined to have the best material and the best means of getting on with your work, and you surely are not sufficiently a respecter of persons in the Contract Department, if by going the shortest cut, you can secure what you want?—That may be so, but I have made an absolute point, whenever I have had anything like definite information to go on, to act upon it at once.

2464. Would it make any difference to you if, in regulations being drawn to define the duties of Director of Contracts, it was provided in those regulations that the heads of departments should have the right, in fact that it should be their duty, to make these inquiries before the lowest tender was accepted?—I think that is necessary, and I think that is really what the Admiralty system is.

2465. Would that satisfy you on that point?—Certainly.

2466. If you had the power and it was your duty to do it, it would remove some of the difficulties with which you have to contend?—Certainly, it would make a material difference. The responsibility then would be thrown upon us if we accepted an unfit man.

2467. And that is what you want; you want to incur the responsibility if you have the power to act?—Yes.

2468. (*Mr. Beckett.*) Is the Store Department at Woolwich under the Director of Contracts in any way?—In no way; it is a Store Branch for Woolwich alone, and is under the Chief Superintendent.

2469. And he exercises his own discretion only as to purchases, does he? Do you think if purchases are made by heads of departments, there would be liable to be the abuses mentioned by Sir Ralph Knox?—I am quite certain, no, but still I would not give the power of purchasing to the heads of departments at all; I would give it to the Store Department at Woolwich, which is perfectly independent of the manufacturing heads, and at the same time is in close touch with them, and which, being part of the factories, has a strong interest in providing for them in the best and cheapest way.

2470. (*Mr. Mather.*) Who controls the Store Department?—The head of the Arsenal—The Chief Superintendent.

2471. (*Sir Charles Welby.*) With regard to the case of the spiral steel springs, you say, I understand, that the whole process took three years before it was finished?—Yes.

2472. But as shown in the memorandum I have here, which the Director of Contracts has submitted in that case, is not the delay which is directly traceable to the firm first accepted, a delay of one year only, and that at the expiration of one year you fell back on the contractors originally recommended?—Yes, that was the total delay; but deliveries began in December 1898.

2473. And the result of that was a further delay of two years?—Yes.

2474. And two years' delay was due to the failure of the contractors you yourself selected?—That is so, but the deliveries began soon after the second contract was placed. These mountings would take about two years to make.

2475. Then you consider two years not an undue delay?—Two years for the completion of the contract was not a delay which, in the circumstances, would have caused me to complain.

2476. It was a case in which you would contemplate two years being consumed, was it?—I think two years too much, though it is a difficult work I admit.

2477. Then you think the other two firms did, on the whole, pretty well when they got the contract?—One of them did extremely well.

2478. (*Mr. Beckett.*) I should like to ask you what blame you attach to the Director of Contracts, he not being in possession of all special information that was at your disposal, for giving this tender to the first firm?—I am not attaching any blame to the Director of Contracts.

2479. (*Mr. Mather.*) Your point is, in relation to that particular matter, that, had you been consulted before the contract was given to the first firm, you would have withheld your consent until you had sent someone down to know if the firm could have made those things as well as the firm you recommended could?—No; my point is that the tenders were referred to me, but that I had no power of satisfying myself whether the first firm could do the work, and therefore I felt obliged to raise no objection.

2480. What I mean in that particular case is, if you had had the power which you have said is the power you require, you would have exercised it. You would have sent down a man at once to satisfy yourself whether the firm, whose tender was the lowest, was capable of doing the work?—Instantly. Of course, we have the very strongest reasons for being economical in our work. When we make our estimates for everything we want, if those estimates are exceeded, even by the cost of materials going up, we are dropped upon, therefore we have, apart from our personal reputation as capable manufacturers, the very strongest motive for getting our things as cheaply as we can.

2481. Who calls you over the coals?—The Director-General of Ordnance.

2482. Has the Director-General of Ordnance really a constant check upon you in respect of the amount of money you are spending?—No, I should not say that; he has a constant check upon us in regard to punctuality of delivery and keeping our times, which, of course, affect his arrangements very much.

2483. Comparing you with open contractors as to cost, who makes that comparison?—I think that is one of the duties of the Director of Contracts.

2484. Therefore, the Director of Contracts does come in there?—I suppose he does.

2485. And in that sense he would form a check, as Sir Ralph Knox said?—But I am not at all certain whether he informs the Financial Secretary of cases in which the prices of the trade are very largely in excess of ours. If our prices exceed those of the trade, we hear of it, and generally have to make explanations.

2486. Will you tell us how your prices compare with the prices of the trades, and at what periods is this done—say, taking the turnover in six months of certain articles, how does the supervision of your professional work act as a check?—I cannot quite tell you. I do not think it is regular, but constantly a complaint comes round saying it has been noticed that certain boxes we are making, or whatever they are, are higher in price than the trade make them for, and I should be asked for an explanation. In some such cases I should reply at once, "The price you quote is the lowest price of several tenders; it is not certain that price is a market price, and it will very probably happen that the next contract—the same contractor's contract

Col. Sir G.
Clarke,
K.C.M.G.

21 Jan. 1901.

Col. Sir G.
Clarke,
K.C.M.G.

21 Jan. 1901.

"—will be at a very much higher rate than the one you are now quoting against me."

2487. The suspicion has from time to time arisen that the results of the manufacturing departments of the Government are not contrasted with the results of private manufacturing concerns, and the country does not know whether they are paying 25 or 50 per cent. more for their work than they could get it for outside; but, since you have mentioned it, can you give the Committee the details of the system? In what way is this check as to cost price constantly kept before the Manufacturing Departments? By whom in this office is that done—whose duty is it to do it?—I think it is done in the Accountant-General's Department. The system is that the cost of every single article made in the factories is put into a statement annually at the factory by the Chief Superintendent, and is embodied in a book which is presented annually to Parliament.

2488. (Mr. Beckett.) Who is it reported to in the first instance?—To the Director-General of Ordnance, and then passed to the Accountant-General's Department, signed by the Accountant-General as the Accounting Officer to the War Office, forwarded to the Treasury, and by the Treasury to the Comptroller and Auditor-General.

2489. By whom is it reviewed?—It would be reviewed in the Accountant-General's Office, and the Accountant-General would refer any question to us; but my grievance rather is that there is no countervailing statement made on the other side, and that the country has no means of forming an idea of how cheap most of the important articles manufactured at the Arsenal are. I should like to say that in five orders recently given for carriages alone, the loss to the country by employing the trade exceeded 411,000*l.*, that is to say, if those orders could have been placed with me, that amount could have been saved. Of course, I am not imputing that it was not absolutely the right thing to do, because the things were required in a hurry and had to be got, but that is an illustration, I think, of how cheaply on the whole the Ordnance Factories do their work.

2490. (Mr. Mather.) When your accounts are annually submitted to Parliament, are not there comparisons made between your accounts and those of a certain number of private contractors doing the same kind of work; otherwise the accounts are not of the slightest value, are they?—I do not know.

2491. No one except an expert could tell, could he, whether the price of a gun was equal to that of an inferior or superior production of any private firm?—Inspection, in most cases, ensures uniformity in quality.

2492. (Mr. Beckett.) Would you not suggest it should be the business of some department to compile a return of that kind for the use of Parliament?—I have always thought that is the kind of information Parliament would like. In one case of one important gun mounting, the price of the great gunmaking firms is rather more than double my price.

2493. (Mr. Mather.) I want to find out what is the check in your department, by which, if the orders you desire were given to particular contractors, Parliament would be satisfied that the country was being as well served by that system as it is at present by passing everything through the Director of Contracts?—Of course, my view is, that the manufacturing heads should not make the contracts, but that contracts should be made by the Central Store Branch of the Arsenal, which would mean very close personal check; that, I think, would save great delay in time and correspondence. It seems to me that a Central Contract Department in London cannot feel the same personal interest in getting things quickly as anyone connected with a great establishment like the Arsenal must feel. Everyone connected with an establishment like that has a certain *esprit de corps*, which makes him anxious to do the best he can for that

department, but there is no stimulus of that kind in the Director of Contracts, who does not know the nature or urgency of the case.

2494. (Mr. Beckett.) Would you not say that there is a special reason in the case of Woolwich, why the power of making contracts should be withdrawn from the Director of Contracts, due to the fact that so many articles which you purchase are required in the process of manufacture, and that if they are not purchased expeditiously the whole process is delayed?—I should certainly say that. We are not allowed to have large reserves of material, and as patterns change so rapidly, it would not be wise to keep large reserves. One is always trying to improve material; and we have to purchase to some extent from hand to mouth; and, therefore, rapidity of purchase is of the utmost importance.

2495. In fact more so than in any other department?—I should say so. Then I must say that considerable expense is caused to the public by the number of things we have to reject. In the first place, if rejection means that a whole piece of work has to stand idle for some time, the price always rises. In the second place, we have to make a number of tests which cost money; and in the third place, trials—like the trials in the manganese bronze case where we had to cast the vessels and prove them to see whether they would stand pressure—all cost money to the public, and are not done at the expense of the contractor. Then, again, if a material does not come in to time, I am very much pressed, and I have to use such materials as I have. Only the other day I was very much pressed to finish a 4·7-inch carriage. The thing has been ready for weeks, except as to certain tubes which I could not get, and I gave an order to cut those tubes out, which was an expense. I say if you have a department which is anxious to push on the work, you save a considerable amount of money.

2496. (Mr. Mather.) I should like to press you a little on the point of the Stores Department at Woolwich Arsenal, which you suggest might become an equivalent to the Director of Contracts' Department, so far as check is concerned at the present time. I think you said none of your people have any control over the officials of the Stores Department at Woolwich?—No, none.

2497. They are responsible to the Director-General of Ordnance, are they?—To the Chief Superintendent immediately.

2498. Who, of course, is the subordinate of the Director-General. Now, taking the case put by Sir Ralph Knox this morning, if we were to recommend that these duties should be performed by the Stores Department at Woolwich, in what way could you, by a statement, satisfy the inquiry that that Stores Department will be a check equivalent to that which the Director of Contracts now affords in passing orders into the country by your instructions?—It would not; and I entirely agree with all Sir Ralph Knox says about having one department checked by another, but I think there should, in that case, be a central reviewing department in London which would have cognisance of all prices paid for materials above a certain amount, and which would bring the buyer who purchased materials which it thought too dear to book.

2499. Purchased for you?—No, quite independent of us all altogether.

2500. Would that department be under the control of this Central Department in London, so far as check is concerned?—It would be, as the Director of Contracts' Department is now, quite independent of every spending department; it would be a reviewing and criticising department, and not a department which enters into the life of the others, and to some extent paralyses them.

Adjourned to to-morrow at 11 o'clock.

SEVENTH DAY'S MEETING.

SIXTH DAY'S EVIDENCE.

At the War Office.

Tuesday, 22nd January 1901.

PRESENT :

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

General Sir HENRY BRACKENBURY, G.C.B., G.C.S.I. (Director-General of Ordnance), further examined.

2501. (*Chairman*.) I understand that you desire to give us some suggestions with regard to possible modifications and improvements in the system of contracts?—Yes.

2502. Will you please do so?—I begin by saying that on Sunday last, I had for the first time an opportunity of reading the evidence of Colonel Steevens, the Principal Ordnance Officer at Woolwich, and Colonel Mulcahy, the Chief Ordnance Officer at the Army Clothing Department, and I also had an opportunity on Saturday of conversation with Sir George Clarke, whose views I know about the manufacturing departments, and it has struck me, in thinking the matter over, that the system which I proposed of simply breaking up the Contracts Branch and placing one portion of it under me in this office, would not meet all that is required; and an idea occurred to me under which I think the needs of my department might be greatly met, and yet the purchasing might be kept under the Director of Contracts without being placed under the head of the Supply Department. The Director-General of Ordnance has certain great responsibilities, but he does not attempt to carry out all those responsibilities himself from his office in Pall Mall; he decentralises that work; he acts, so far as general stores are concerned, through the Principal Ordnance Officer at Woolwich, and so far as clothing is concerned, through the Chief Ordnance Officer at Pimlico, while retaining in his own hands matters connected with weapons of war, and gun and small arm ammunition, which he works direct from Pall Mall. The Accountant-General, again, has very large responsibilities; he is directly responsible to Parliament for accounting for the Army under the Audit and Exchequer Act, but he does not attempt to do the whole of his duties himself in Pall Mall. He has a branch of his office at Woolwich, which does the accounting of the Ordnance Factories and does the accounting for the Principal Ordnance Officer, and he has another branch of his office in the Army Clothing Department, which does the accounting for the Army Clothing Department. That brings me to the Director of Contracts, who is charged with making purchases in concert with the heads of divisions. If that "in concert with" is to become a reality I think it must be done in concert with those officers of the Director-General of Ordnance to whom he delegates certain portions of his work. It struck me very much in reading the evidence that the Contracts Branch was not sufficiently in touch with those officers to whom I delegate certain powers, and the proposal I would now make is that the Director of Contracts should also decentralise, and that he should have an Assistant Director of Contracts in Woolwich Arsenal who should make contracts there in concert with the Principal Ordnance Officer and the Ordnance Factories, and that he should have another Assistant Director of Contracts at the Army Clothing Department who should take contracts in concert with the Chief Ordnance Officer

of the Army Clothing Department, while the contracts for weapons of war and ammunition, both for guns and small arms, should as now be made in this office in concert with the Director-General of Ordnance. In that way, I believe, we might get these branches in complete touch with the officers who are directly responsible for the ordering and supply of stores under me. The system, I may mention now (I do not think that this has yet been told to the Committee) is this: The Principal Ordnance Officer (we will take him, and it is the same with all) puts forward a demand either on his own initiative because he knows that certain stores will be required, and it is his duty to see that he always has a stock in hand, or upon a direction from this office. The latter case occurs especially in war time, when telegrams are every day being received from South Africa making immense demands for stores.

2503. (*Mr. Gibb*.) When you say "in this office" do you mean yourself?—Myself, in Pall Mall. Every one of these telegrams is brought to me, and I direct the Principal Ordnance Officer to supply, and to put in demands for replacement. The Principal Ordnance Officer makes out the demand and he sends it through the Chief Inspector of that Branch of the Inspection Department which inspects that particular kind of stores, it may be the Chief Inspector of General Stores, or it may be the Chief Inspector Woolwich if it is for ammunition, and so on. He sends in the demand through the Chief Inspector, who fills up the details of the demand from the specification. That demand then comes up to Pall Mall to my office, and it is passed to the Director of Contracts through the Accountant-General's Branch F. 12, which deals with the Director-General of Ordnance's accounts, and they note the estimated liability on this demand. It then reaches the Director of Contracts who puts out the contract, and that is then passed back through F. 12, who note the actual amount of liability incurred on the contract. If my proposal for decentralisation were to be approved it would, I think, involve, in order to save delay, that the Accountant-General should have both at Woolwich and at Pimlico an officer of F. 12 to note these liabilities; and he might send up a weekly schedule to the Accountant-General of every contract that has been made, or every demand that has been sent forward. If that were done I think we should get rid of an enormous amount of correspondence, and that there would be a direct touch between the Contract Branch and the Principal Ordnance Officer, the Ordnance Factories, and the Army Clothing Department. It would be necessary if that were done to build offices at Woolwich under the same roof, as in my opinion they ought to be, as the Principal Ordnance Officer's office, and either to build or to hire accommodation at the Army Clothing Department; and I should propose that these Assistant Directors of Contract should have the power subject to certain rules (for I think there ought to be more stringent and more definite rules for

Gen. Sir H.

the Contract Department than there are) delegated to them by the Director of Contracts to make contracts for those respective branches in concert with the Principal Ordnance Officer and the Chief Superintendent of Ordnance Factories, and that they should only refer to Pall Mall when there was a difference of opinion between them and the Principal Ordnance Officer, the Chief Superintendent of the Ordnance Factories, or the Chief Ordnance Officer at Pimlico, which they could not settle. In that case they would refer to the Director of Contracts who would settle the matter with me.

2504. (*Mr. Mather.*) Do you mean the Assistant Directors of Contracts?—The Assistant Directors of Contracts should have power to make contracts in concert with the Principal Ordnance Officer and the Chief Superintendent of Ordnance Factories and the Chief Ordnance Officer at Pimlico.

2505. The Assistant Director and an officer of your department?—Yes.

2506. And an officer of the Accountant-General?—No, he merely notes; if he sees that my expenditure is going too far he warns me at once.

2507. Does he warn your officers on the spot?—He would under this suggestion of mine warn them on the spot; there is no such decentralisation at this moment. And then they should settle all contracts on which they could agree, which would be the immense majority, without any reference to Pall Mall at all, and a case would only come up to Pall Mall if they could not agree. Then the Director of Contracts would settle that case with me, and if we could not agree there is the usual appeal to the Financial Secretary.

2508. (*Mr. Beckett.*) I suppose the Director of Contracts at Pall Mall would be notified of these contracts after they have been made?—Yes, it would be the duty, of course, of his Assistant Director of Contracts, in whatever form he pleased, to send him up a weekly schedule or some such report.

2509. (*Mr. Mather.*) And in like manner would your representative notify you?—My representative should notify me, of course.

2510. (*Sir Charles Welby.*) Did I rightly understand you to say that there are branches of F. 12 already at Woolwich?—Not of F. 12, there is a branch of F. 12 at Pimlico; at Woolwich it is F. 13. The F. 12 is for Army factories only. So far as the Accountant-General is concerned, as I understand it, all that he would require (and I may mention that I have been talking to Mr. Harris on the subject this morning) would be to put in a more responsible man than he has at present.

2511. Otherwise the machinery is in existence?—The machinery is in existence if he is put in.

2512. (*Chairman.*) You suggest that the Assistant Director of Contracts at Woolwich or at Pimlico is to make the contract in concert with the officers there, under a strict set of instructions, and only to report to the Director of Contracts when there is a departure from those instructions, and the officers cannot agree?—When they cannot agree. Not on a departure from the instructions, but when they cannot agree.

2513. You would not have him report when there was a departure from the instructions?—I do not suppose he would depart from the instructions without asking leave to do so.

2514. For instance, the general system is that the lowest tender should be accepted; if for any particular reason the Supply Department wished to accept a tender other than the lowest, would that have to be referred by the Assistant Director of Contracts to the Director of Contracts?—Certainly not, according to my view, because I think there should be an instruction here, as there is in the Admiralty, that it is not necessarily the lowest tender which is to be accepted, but that the question of—I do not remember the exact wording of it—the contractor's ability to carry out the contract and the quality of the goods he delivers and so on, should all be taken into consideration as well as the lowest tender.

2515. But the system now obtaining in practice, is that the lowest tender should be accepted, taking into consideration questions of time, of course?—I would say that so far as regards those things where we personally, in this office in Pall Mall, work in concert with the Director of Contracts, it is not by any means the case that the lowest tender is always accepted.

2516. No, but generally it is so, is it not?—The Director of Contracts sends us up a schedule of tenders, and he says, "I propose so and so," giving his reasons, and we either say we agree or we say, "No, we do not think it should be given to that man, we do not believe in him, he has failed so often; we do not wish it to be given to him;" or we say, "Time is of such great importance that we would rather it was given to these people who we know can deliver," and so on; and in nine cases out of ten, in 99 cases out of 100 I should think, the Director of Contracts would take our view.

2517. (*Mr. Mather.*) He does now take your view, does he?—Yes, he does as a rule, not always; there may be a difference, but, as a rule, he takes our view.

2518. You have few disputes upon that point?—We have few disputes upon that point here in Pall Mall, very few, indeed.

2519. (*Chairman.*) Then, in your opinion, the Assistant Director of Contracts, either at Woolwich or at Pimlico, should have the power delegated to him to arrange with the department there if, in their view, a tender higher than the lowest tender should be accepted?—Yes, that would be the very essence of my proposal. If that was not done there would be nothing gained by it.

2520. (*Sir Charles Welby.*) He would report, of course, to his superior in Pall Mall anything that appeared exceptional?—Yes, he would report anything that appeared exceptional.

2521. (*Chairman.*) And the Director of Contracts in Pall Mall would have a reviewing power; he would point it out to the departments from time to time if he thought they were using their discretion too largely?—Certainly; exactly as I should have the same control over the Principal Ordnance Officer at Woolwich, the Chief Ordnance Officer at Pimlico, and the Chief Superintendent of Ordnance Factories. It is a controlling and directing power.

2522. Now, when a question arose of making an urgent purchase outside the system of tender, would it, in your opinion, have to be referred to the Director of Contracts?—No, I think it ought not to be, because it implies great urgency.

2523. And it would only be in cases of great urgency?—It would only be in a case of great urgency, and then the Director of Contracts would have his own man on the spot instead of, as now, if the Principal Ordnance Officer wants to make a purchase in a matter of great urgency, he has to communicate here with Pall Mall. Under that condition the Principal Ordnance Officer would communicate direct with the Assistant Director of Contracts at Woolwich, and say: "This is Thursday afternoon. I have to ship these things on Saturday, may I buy?" and he would say, "Yes," and would report it.

2524. He would have that power in his discretion?—I think he ought to have.

2525. To pronounce that there was such a case of urgency, subject to his general responsibility to the Director of Contracts, to whom he would have to explain it?—Yes, or, rather to agree to the special purchase being made on the pronouncement of urgency by my representative.

2526. (*Mr. Mather.*) What would happen if the Assistant Director of Contracts said, "No, you may not"?—Then the Principal Ordnance Officer would telegraph up to me at once, and I should go to the Director of Contracts about it.

2527. (*Chairman.*) And failing an agreement between the Director-General of Ordnance and the Director of Contracts you would appeal to the Financial Secretary?—I can scarcely think that in a case of real urgency the Assistant Director of Contracts would take upon himself the responsibility of blocking the public service for a question of technicality.

2528. (*Colonel Miles.*) Why should the special purchases be dealt with by the Contracts Branch; why should they not be dealt with directly between your Branch and the Financial Secretary?—That is what I propose when there is such an urgency.

2529. Why not remove special purchases from the Contracts Branch and place them under the Financial Secretary?—Who is to say what is a special purchase?

2530. (*Mr. Gibb.*) Apparently, in the Admiralty, the head of a department may purchase stores urgently

required without the intervention of the Contract Department?—I think that that ought to be. I think that the head of the department ought to be authorised to purchase stores in cases of great urgency, making an immediate report of his having done so, and, if he did it in excess, or did it when it was not urgent, then he ought to be pulled up.

2531. (*Chairman.*) But if you had your suggested Assistant Director of Contracts at Pimlico and Woolwich no time really would be lost?—No time would be lost if he were given the power to say "You may buy."

2532. And against any criticism you would have this kind of defence that the question had been considered by two people. I mean if you only had one man to decide for the purchasing department he would be more liable, I think, to criticism?—You must remember this, that under such a rule as exists at present we have no authority to make special purchases at all: at least the Principal Ordnance Officer has up to 25*l.*, but not above that. That order will, I think, by, I will not say any strong man, but by any man worthy to be put in that place, be constantly disobeyed, because he will say, "The public interest" and the needs of the Army take precedence of any "question of an order of that kind. I am going to make this purchase, and run the chance of being called to account."

2533. (*Sir Charles Welby.*) It has been done during this war?—It has been done during this war; and on every occasion when that has been done, so far as I know, the Director of Contracts has objected.

2534. But has he raised more than a formal objection and a formal query?—Yes, he has.

2535. (*Chairman.*) Any question of special purchases would be very liable to lead to criticism, and rather to provoke an atmosphere of unwholesome, though very likely totally unwarrantable, suspicion?—I think, myself, if power were given only to the head of the department to make the purchase, even then more or less the Principal Ordnance Officer would, as I say, if he knows the thing is of vital importance, and that it must go out by a steamer sailing immediately, disregard the rule and make the purchase.

2536. (*Mr. Gibb.*) Some strong man would, but a weak man would not?—A weak man would not, but a strong man would say, "Which is to take precedence"—the wants of the Army, the wants of the public "service in this urgent need, or the rule," and he would say, "Let the rule go to the wall."

2537. (*Mr. Beckett.*) By your proposal, under ordinary circumstances, the Director of Contracts would have only a very limited power of objection, would he, supposing that he disapproved of the arrangement made by the Assistant Director of Contracts, and the head of the department, what would his position then be?—I suppose he would pitch into his own officer, and tell him he had done wrong, just as I do into mine.

2538. Then the contract would have been made, of course?—Yes.

2539. He would only have the power of censure, in fact, or criticism?—Yes, over his own officer.

2540. But no power of obstruction?—No, but I have no more over the Principal Ordnance Officer or the Chief Ordnance Officer at Pimlico. I do not find out that he has done wrong until he has done it. It must be so wherever you decentralise or delegate authority; you do not know that a man has done wrong until he has done it, and then you have the power, if he is constantly in the habit of doing wrong, to get rid of him, I suppose; I should, certainly.

2541. (*Mr. Gibb.*) But you are rather assuming that the Assistant Director of Contracts would consent to urgent purchases more readily than the Director of Contracts at present does?—Because I think the Principal Ordnance Officer would see him and he would say, "Here, I have to send these things off on Saturday; I have only got so many hours or days; we shall never be able to do it with the usual system; may I send my fellows out and buy it?" And if the Assistant Director of Contracts was a very weak man, perhaps he would say, "No, I dare not do that; you must go to the Contract Branch." In that case the thing would work badly. But if he was a reasonable and strong man he would say, "Yes, cer-

"tainly, the urgency is great;" and then he would report to the Director of Contracts that he had sanctioned it.

2542. You would say that in time of war, at all events, and in cases of extreme urgency every responsible officer should be at liberty to do his best?—I think so. Look, for instance, at what was done for me here. Every financial rule that existed in the War Office was necessarily put aside at the beginning of this war, or shortly after this war started, and I had practically unlimited power given me to order and to purchase through the Director of Contracts whatever was necessary for the Army in South Africa, reporting afterwards to the Army Board.

2543. (*Chairman.*) But we have to frame a scheme for normal times?—Of course.

2544. (*Mr. Mather.*) The inquiry we have made so far, in connexion with the office of the Director of Contracts and his relation to the manufacturing departments and supply departments, tends to show that in normal times—not in war times, which we hope will become still less frequent in the future even than they have been in the past—the system does not work satisfactorily?—It is so.

2545. In the ordinary current business of the year in peace time it has been shown in evidence—we have to weigh it, of course, but it has been shown to us very clearly by witnesses from the supply departments, from your own departments, that friction does occur by the process of circumlocution?—Yes.

2546. And that frequently the supply departments do not obtain the goods which they think would be best for the service and the country?—Quite so.

2547. You have, in your own evidence, also said that the solution of the difficulties that have arisen so far would be that the Director of Contracts should be the servant of the supply departments and not, as it were, their master?—Yes.

2548. And yet, in a sense, their co-equal in determining and coming to a final decision, where there is a difference of opinion?—Yes.

2549. I would ask, in relation to the scheme you have just propounded, whether the representative of the Director of Contracts in the various manufacturing departments and supply departments ought not to be, in your opinion, really the servant of the head of the department charged with carrying out work under your control, in this sense, that in discussing the needs of the order to be given and the place where it should be located, there should be ample weight given by your representative to the views of the representative of the Director of Contracts, but that finally the decision should rest with your officer to demand that the contract should be given; and that after it has been given, it should be referred to the Director of Contracts and recorded there, and by him reported to the Financial Secretary. I think that was the scheme you wanted to have carried out?—I should infinitely prefer that the responsibility for the allocation of contracts did rest with me.

2550. Otherwise your scheme—no doubt modified in deference to the existing system and orders in council and so on—would introduce, would it not, an element of delay if the officer representing the Director of Contracts had to give permission, yes or no, to your officer, and if, supposing they did not agree, the matter had again to be referred to the Director of Contracts and so on. Would not that introduce another possibility of delay?—Then there is no alternative, is there, but to place the making of contracts under the Director-General of Ordnance?

2551. (*Chairman.*) A suggestion has been made to the Committee that in the case of such very highly technical stores as guns and ammunition, the dealing with these articles might be handed over direct to the Director-General of Ordnance, just as dealing with ships for the Navy is handed over to the Controller of the Navy; and similarly as regards works, that these might be handed over to the Inspector-General of Fortifications, just as works for the Navy are handed over to the Director of Works, that is to say, that these two departments of a technical nature would be detached from the Director of Contracts. Would you kindly favour us with your opinion upon such a suggestion?—I think that that would be a step in the right direction; but I would say that the portion of my work in which the least friction of all occurs, and the least difficulties

Gen. Sir H.
Brackenbury,

G.C.S.I.

22 Jan. 1901.

are experienced, is in connexion with the guns and ammunition.

2552. (*Mr. Gibb.*) Perhaps that arises from the Director of Contracts practically leaving the decision in such matters to your department?—To a certain extent it does.

2553. (*Mr. Mather.*) Apart from that there is a quantity of machinery, electrical machinery, and engines and appliances of all kinds required for the Army, which also come under what you call technical stores in the same way that guns and gun carriages and ammunition would come under that definition?—Yes.

2554. And the scope of the suggestion just referred to was that all that class of work should come directly under, and only under, the control of the Director-General of Ordnance or his officers, subject, of course, to a report being made to the Director of Contracts, and the whole thing being eventually placed before the Financial Secretary?—That, as I say, is a step in the right direction, but where my greatest difficulties occur is in connexion with the general stores, clothes, and so on.

2555. (*Chairman.*) Articles of a general nature, not highly technical?—Yes, not so much clothing, but general stores. I do not know if you have ever seen the vocabulary.

2556. Yes, we had one before us the other day?—Then you have seen what a mass of general stores there is.

2557. (*Mr. Mather.*) With regard to your suggestion about delegation to a Deputy Director of Contracts and a Deputy Accountant-General, in each of your departments, may I ask whether that would be necessary, supposing the system were so altered that the heads of your departments had the right of consultation with the Director of Contracts upon tenders and offers to work, and to decide in cases of difference of opinion to whom the work should be given if they required it?—Yes, I think that decentralisation would be equally necessary.

2558. Assuming that the head of any of your departments had a right and freedom, and, therefore, the responsibility, in case of difference of opinion, of demanding from the Director of Contracts that his wishes should be carried out in relation to that contract, there would be no hindrance, whatever, between the want and its supply?—Certainly, but that is practically making the contracts under me, is it not?

2559. It is practically making it under you, of course, but always with the intervention of the Director of Contracts, to make such representations to the head of your department or to yourself, as he may in the public service think necessary?—Then, I think, if all that is to take place by correspondence between Woolwich and London, that delays business frightfully, and I think the decentralisation would be better. You see the Principal Ordnance Officer has an enormous amount of responsibility, and a great amount of work, and he cannot be running backwards and forwards from Woolwich to London every day to have conferences with the Director of Contracts. And the same thing with the Chief Ordnance Officer in the Army Clothing Department, which is two or three miles off; he is taken away from his work a couple of hours if he has to come here to consult and go back again.

2560. Then your scheme would be that the deputy from the Director of Contracts, and the deputy from the Accountant-General, would be permanent officers in the department controlled by one of your heads?—No, they would be a deputy officer of the Director of Contracts located there, and a deputy officer of the Accountant-General located there.

2561. But would they be permanent officers of those respective departments?—Certainly.

2562. In contact with your officers?—Yes.

2563. And, therefore, their work, you consider, would be sufficient to keep them constantly employed?—Yes, ample.

2564. All the year round, in time of peace, I mean, in normal times?—Yes, ample.

2565. Then, to make it effective in the sense of your officer having the right to determine about a contract, it would be necessary for these deputies to accept his final decision in case of dispute?—Naturally.

2566. And any transaction so determined would be recorded and reported to the Director of Contracts?—Yes.

2567. Not for the purpose of his checking on that particular contract what might in his opinion be wrong; that would have already passed and gone on to avoid delay?—Yes.

2568. But the record of that transaction would be considered by him, and by the Financial Secretary and yourself, if thought necessary?—Yes.

2569. And there would be a check, after the event in that particular case, yet having a very important bearing upon any further transaction of that character that might come up between the two deputies and your department?—Yes.

2570. That is a check you consider sufficient for the purpose?—Yes.

2571. Am I not putting it rather higher than you do?—Yes.

2572. I mean that your officer should have the determining voice on the spot and practically order the Assistant Director of Contracts to give the contract where he thought best?—I did not go so far as that.

2573. No; I say I am putting it higher, but I am doing it because the evidence given by you the other day is not quite in accordance with the recommendations you make to-day?—No, it is not. I distinctly said so. I have been thinking out whether there was any means by which, while keeping the Director of Contracts, I could better the existing state of things. I still distinctly say I should prefer to have the making of contracts myself.

2574. (*Chairman.*) But failing that, you have been trying to work out a scheme that would dovetail in with existing institutions?—Yes, which would dovetail in with existing institutions. I was satisfied when I read the evidence that my own original proposal, which was simply to do away with the Director of Contracts and put that branch of his office which deals with my stores into my office here in Pall Mall, did not go far enough; that it would be absolutely necessary, in order to get into proper touch, to decentralise that office, and that if that office of the Director of Contracts were placed under me I should decentralise it. I think it is right that I should say that straight out.

2575. (*Sir George Clarke.*) Then you regard this proposal of yours to-day as distinctly in the nature of a compromise?—Distinctly in the nature of a compromise.

2576. And, like all compromises, it must be liable to criticism?—Yes.

2577. And it would be possible to criticise somewhat severely this suggestion and show that there are loopholes in it which might lead to difficulties later on?—I think any system that the human mind can devise is always liable to be found to have something wrong in it eventually.

2578. Then you think, do you not, that there is only one great principle which should rule the spending departments of the War Office, and that is that the heads of those departments should be held individually responsible, with complete power over their expenditure?—That is my original contention.

2579. And you think it desirable that a reviewing department outside of those departments, a reviewing department of purchases and of contracts, merely looking into purchases and contracts above a certain amount say, and seeing that certain regulations are followed and certain monopolies not created, would be quite sufficient to guarantee the public that everything was right?—That is my personal opinion.

2580. Is not that founded on a great principle, while you cannot say that this compromise is founded on that principle?—The compromise is not founded upon a principle. I never heard of any compromise that was.

2581. And as regards the practical working of this compromise system, I take it we might assume that it would mean a larger staff than the adoption of the great principle we have spoken of; it would mean reduplication of staff in a certain way?—I do not see that.

2582. Your Store Department at Woolwich with very little assistance and doing very little more than it does now would be able to purchase all the stores required?—I do not agree, I am afraid.

2583. I think you will find that nearly the whole of the work is duplicated?—I am afraid I do not agree in that. The actual work of the Director of Contracts is the preparation of tenders and sending out the tenders, the receipt of the tenders, and the examining of tenders and correspondence upon them with the contractors, and for all that we should require an additional staff.

2584. But not in proportion to the staff if the thing had to be independently performed?—I am afraid I could not say that.

2585. (*Mr. Mather.*) What reduction might it possibly make in the staff of Director of Contracts now?—I could not answer that.

2586. (*Sir George Clarke.*) But we had from the Deputy Inspector-General of Fortifications the statement that if he were allowed to make his contracts under the Inspector-General of Fortifications practically the addition to his staff would be trifling because so much of the work is now duplicated?—I have not looked into that question of duplication of work.

2587. It might prove, as I say, might it not, that there would be a considerable saving of staff when it came to be looked into if you had the full power?—Very possibly.

2588. Would not the reality of the decentralisation, under the compromise scheme, depend considerably upon the views that might be taken by the holder of the office of Director of Contracts, that is to say, he might not be of a decentralising tendency, and might work his apparently decentralised office upon extremely centralised principles, and much would, therefore, be left with him?—I think a great deal would depend upon the Financial Secretary, because if the Director of Contracts attempted to recentralise that would be represented to the Director-General of Ordnance who would object, and would go the Financial Secretary, and, if necessary, to the Secretary of State.

2589. We have been told by the Permanent Under Secretary that there is a general tendency among departments of all kinds to draw power to their own hands. If that tendency asserted itself in the newly constituted office of the Director of Contracts would not that, to some extent, defeat the decentralisation which you hope would arise from the system?—No doubt.

2590. Therefore, would it not depend upon inviolability of the regulations drawn up for the guidance of the Director of Contracts; that certain rather rigid regulations, such as those of the Admiralty, would have to be drawn up and those regulations would have to be rigidly adhered to if any benefit was to be derived from the system?—I do not think it is necessary to draw up such elaborate regulations as there are in the Admiralty. I think a few guiding principles are all that is wanted.

2591. In any case, I suppose that you would desire to see some extended power of direct purchase given to the departments; that the Arsenal should not be limited to 25*l.*, and the Principal Ordnance Officer should not be limited to 25*l.*?—I think a money limit is meaningless. I do not see any meaning in it. The question is, Is an urgent outside purchase necessary in the interests of the public service at this moment, or is it not; and that should be his guide; it is not a question of 25*l.* or 100*l.*

2592. And lastly, you would prefer to see any reorganisation of the Contracts Branch or of any Branch of the War Office based upon great principles and not saturated with compromise?—Yes, I should prefer it greatly. And I repeat what I said in my original evidence, that I think if you go to great principles and do not want compromise, then the great principle is that the man who is held responsible under the Queen's Order in Council for supplying the Army should have all the means of getting that supply in his own hands, that is the great principle that I see.

2593. (*Chairman.*) The essence of your suggestions, which you say are a compromise, comes to this, that the Assistant Directors of Contracts being in close touch with the officers of the Supply Departments and acting in concert with them would more thoroughly realise their difficulties would more readily assist them, and that delays would be avoided and superfluous correspondence done away with?—Quite so.

2594. And it would be necessary in order to carry out your suggestions that all purchases of clothing should be actually made at Pimlico, and that all pur-

chases for Woolwich Arsenal should be made at Woolwich?—Yes.

2595. You would see no objection to having purchases made at Pimlico and at Woolwich?—It is only a question whether the letter inviting tenders is posted in Woolwich or in London; that is the only difference; and whether the acceptance of the tenders is dated from Woolwich or from London. There is absolutely no other difference.

2596. (*Sir Charles Welby.*) But the contractors do come occasionally in person to make inquiries?—That is another point that I should like to mention: that at present the contractor has a great many different places that he has to go to. If he wants to see the Contracts Branch he has to come here to Pall Mall; if he wants to see the man who has ordered the stores and knows what he wants, he has to go to Woolwich and see the Principal Ordnance Officer, or the Superintendent of the Factories; if he wants to consult the Inspection Branch which has rejected some of his contracts, and to find out why it is done and make inquiries, again he has to go to Woolwich. Under my system the Inspection Branch both for general stores, guns, and everything else is at Woolwich, the principal Ordnance Officer is at Woolwich, the Chief Superintendent of Factories is at Woolwich, and the Contract Office would be at Woolwich too; and he would see the whole of them in one day. And the same thing at Pimlico; if he wants anything about clothing, if he wants to see the inspector who has rejected clothing he has to go to Pimlico; if he wants to see the Chief Ordnance Officer who has demanded the clothing he has to go to Pimlico; if he wants to see the Contracts Branch he has to come here. Under my system he has only one place to go to, Pimlico.

2597. And also there would be the additional advantage that he would be able to see the representative of the Supply Department and the representative of the Contract Branch together, and there would be less risk of getting two different answers from two different authorities?—Quite so.

2598. (*Sir George Clarke.*) May I take it that, in your case there is no objection whatever on your part as head of a great department to a review of your proceedings by outside Civil departments?—Absolutely none. I court review.

2599. But the difficulty you think that occurs is the intermediate interference and interaction of those departments with yours which impairs and destroys your responsibility?—Yes, that is the case. It is this particular department I find it in. There is no difficulty now between my department and the Accountant-General's department; they do not always agree with me, but it is very seldom we do not find that we do not agree together ultimately. I see that they are right, or they think I may have made out a good case, and they agree with me. It is very seldom now that I have to refer anything on appeal to the Secretary of State, which I have the right to do in any case where there is a difference between myself and the Financial Secretary.

2600. (*Sir Charles Welby.*) These suggestions of yours would not affect the question of purchase of warlike stores for the Navy?—No, I am not thinking of that; I am thinking only of my own department.

2601. (*Mr. Beckett.*) Under your scheme who would see to the execution, and the progress of the orders?—I have not reached that point yet, but I have noted down in these rough notes which I have brought with me that this proposal, if accompanied by the grant of authority to me and my representatives to press on defaulting contractors and to deal with contractors from the time the contract was made would greatly improve matters, provided that my representations as to inflicting penalties were not ignored.

2602. Then the Assistant Director of Contracts would have nothing further to do with the matter, would he; the responsibility would rest on the head of the department?—When he has made the purchase the rest ought to be in our hands.

2603. (*Sir Charles Welby.*) Except the actual infliction of penalties?—Except the actual infliction of penalties. The actual infliction of penalties, in my opinion, ought not to be in the hands of anyone short of the Financial Secretary himself, because it is a serious question. If it were placed absolutely and entirely in the hands of, say, the Director-General of Ordnance he might perhaps get up a bad state of feeling somewhere; if he

were a little indiscreet he might possibly do harm, but his representations ought not to be ignored in the way they have been in the past in the Contracts Department, and I do not think it is satisfactory that when the Director-General of Ordnance or his representative the Principal Ordnance Officer says that deliveries have been so bad that he presses for a fine, the Director of Contracts should have, in his own hands, the power to say, "I shall not inflict that fine."

2604. (*Mr. Beckett.*) And you would refer it in every case to the Financial Secretary?—I think that if there was the smallest objection he should decide. Or, to put it in another way, I think that if the fines recommended by my department were not carried out as a matter of course, the remission ought to be solely in the hands of the Financial Secretary.

2605. And the Director of Contracts should have no power of that sort in his hands whatever, except the power of representation?—Yes, except the power of representation.

2606. Now, as regards these travelling inspectors, would you propose that you should appoint these travelling inspectors?—That raises another point, too, that is the question, to whom contracts should be given. Firms tender who have not had contracts before. I hold that my department is the best department to visit those works, and to see whether they should tender, and whether their tenders should be accepted or not, because I have experts who understand what the capability of a firm is. The Director of Contracts has not such men, his men are War Office clerks. I do not want to say a word against any man in the Director of Contracts office; I believe they are the most industrious, hardworking, and faithful servants it is possible to have, but they cannot have expert knowledge as to the power of works to undertake contracts.

2607. And I see that even in regard to a department of the work that is held up to us as being one that could only be efficiently discharged by the Director of Contracts, you say that one of your people visited the north of England, and found out a vast number of sources of supply which the Director of Contracts had never attempted to find out?—He had not previously attempted to find them out.

2608. Therefore, in that department you think the work could be more efficiently discharged if it were placed in your hands?—Yes.

2609. And there is one other question, you said that you did not find that there was much friction as regards the ordering of guns and ammunition, and so forth, between yourself and the Director of Contracts; but I see that you say, at No. 364, in your evidence, "The difficulties that we have experienced in the past year have been very great, and there has been constant friction between my department and the department of the Director of Contracts." Would you mind saying in what direction that friction has arisen?—That is more in connexion with these general stores, and also to a certain extent clothing, but chiefly general stores.

2610. (*Sir George Clarke.*) The guns and ammunition contracts you refer to are very large contracts?—They are mostly very large contracts, and they are with great and well-known firms.

2611. That is really the reason why there is no friction?—We are so limited. There are only two firms in the country that make guns, Armstrongs and Vickers. There are a certain number of firms, a small number, who make projectiles; occasionally a new firm wishes to come in and that is referred to us; and there is not room for friction there. There are a very limited number of firms again who make small arms.

2612. And it has been your policy, as Director-General of Ordnance to try and increase the number of firms and encourage them to tender?—Most distinctly; I am doing everything I can to do that.

2613. (*Mr. Beckett.*) With regard to the scheme which was outlined to you by the Chairman, you say you consider it a step in the right direction, but do not you think it would be a further step in the right direction than the compromise that is now suggested by you?—Yes, I do. There is nothing in what was outlined to me that would not go with this compromise too, that is to say, the guns, the ammunition, and the mountings being put entirely into my hands, but you would still want some means of making contracts at

Woolwich and at Pimlico in concert with the heads of the departments there.

2614. (*Mr. Gibb.*) But you would not object to the Director of Contracts having a sufficient staff at his disposal, including travelling inspectors, if necessary, to seek out sources of supply?—Not the least.

2615. You only wish that you should have complete facility for visiting works whenever you wished to do so?—Yes.

2616. And the Director of Contracts has explained to us that his admitted failure to do so was due to want of staff?—I am not so sure that those men would be necessary for the Director of Contracts if he had nothing to do but inviting tenders and placing them out; because, if I were given a free hand, I should constantly be sending out my people to try and find out fresh sources of supply.

2617. And your inspectors, you think, from their superior technical knowledge would have better means of judging the capacity of works?—The officers of the inspection branch and of manufacturing departments of the Ordnance factories, of course, have great technical knowledge and, as a rule, if I send out an inspector and one of those people together, they practically combine all the knowledge that can be wanted. One of them understands what the machines can do; when he sees the shops at the manufacturing works he can judge of the power of its output, and the inspector can judge of the quality of the stuff they are turning out from what he sees.

2618. And, thirdly, an experienced buyer like the Director of Contracts can, perhaps, better judge of the wiles of traders?—I daresay he can.

2619. So that you would have a combination of all; a knowledge of stores and a knowledge of human nature?—I do not think you can get any more knowledge of human nature by sitting on a stool in the War Office than by inspecting goods or manufacturing them Woolwich or Enfield.

2620. Now this valuable suggestion you have made is not a compromise in any other sense than differing from the suggestion that you made formerly. It is a well thought-out and thoroughly complete scheme, not sacrificing principles, is not that so?—It sacrifices a great principle, to my mind, the principle that the officer responsible for the supply should have the power of dealing with that supply himself in every step of it from first to last.

2621. But, on the other hand, your consideration has led you to see that the grant of the complete power of making purchases to the Director-General of Ordnance would controvert another great principle, namely, that of decentralisation as compared with centralisation?—My original proposal to simply put that part of the Director of Contracts Branch which deals with my stores into my office here in Pall Mall, I am satisfied from reading this evidence and from other sources, including conversations I have had, would not go far enough, and that I should have to decentralise.

2622. And in choosing between the two great principles you are satisfied that the suggestion you now make would be the most satisfactory for the public service?—The best thing in my mind, personally, would be to break up this contract-making branch and to put the portion of it which purchases ordnance stores directly under me. The next best thing, if this Committee are unwilling to place the making of purchases directly under me, is the suggestion I have made to-day. That is my personal view of the matter.

2623. And according to the proposal, the local representative of the Director of Contracts and the local representative of the Director-General of Ordnance would settle between themselves practically all questions of contracts subject to a review by the head office in Pall Mall?—That is so.

2624. (*Sir George Clarke.*) And the comparatively recent delegation of contracting power to General Officers Commanding Districts is, is it not, a long step in the direction of the realisation of the big principle of which you have spoken?—Yes, but that decentralisation does not apply to Ordnance Stores.

2625. Is it not an anomaly that the General Officer Commanding the District can make a contract for 2,000L, and that you, the head of the Ordnance Branch, have not got that power?—It is an extraordinary thing.

2626. (*Mr. Mather.*) I should like to ask you one more question in regard to this suggestion of yours, because it appears to me to be a matter of very considerable importance. I think there is, if you will allow me to say so, one very weak link in the chain you have presented to us this morning, namely, that in the relations between them, what I call the Deputy Director of Contracts, who would serve under your scheme, and solely serve one of your departments, would not be amenable to the instructions and orders of your representative. You have all along, in your scheme, defined the position of the Deputy Director of Contracts as that of an official who would have a right to dispute matters with your representative, and there is no decision provided for in your scheme on the spot as to whom the contract shall go to immediately?—That is so.

2627. That, in my opinion, is a very fatal objection to it in work?—Then in that case it is a fatal objection to the existing system, because at present there are only two people recognised; one is the Director of Contracts, and the other is the Director-General of Ordnance; and where we do not agree there is your fatal objection.

2628. But assuming your scheme to be the very best so far as avoiding unnecessary correspondence is concerned, assuming that such a representative of the Director of Contracts is placed in one of your Departments, and also a representative of the Accountant-General, why should the head of your Department not be responsible for demanding that his wishes should be carried out after full representation and discussion by the representative of the Director of Contracts?—I should be very glad if you make him so. That is putting the thing under me, which I have said I think is the best plan.

2629. It is putting the responsibility upon you?—Certainly.

2630. Because you would be responsible for all the acts of your officers?—Yes, I am responsible for all the acts of the heads of my departments.

2631. Then it appears to me that a check might come in in the most salutary form by the representative of the Director of Contracts recording the transaction, and the nature of the discussion he had with your representative; and that would come before you and the Director of Contracts here for review?—Yes.

2632. But upon the particular transaction you would have already assumed the responsibility, and that could not be undone?—Yes.

2633. And you would assume that responsibility, of course, in the light of knowledge which the Committee may perhaps recommend you to obtain, by having full power to make investigations as to the character of the firm, the nature of their work, their capacity to deliver work quickly, and so on?—Quite so.

2634. Such a scheme of reference would be rather a new feature in your department in the future?—Yes.

2635. Under those circumstances, with the knowledge and experience and responsibility of producing what the country and the army requires in your departments, you are entitled, I presume you think, to the responsibility of finally determining to whom the contract should go?—I think I ought to be.

2636. Therefore, do you not think that under your scheme that you suggested this morning your officer ought to have the final decision as between himself and the representative of the Director of Contracts on any particular transaction?—Yes, I do think so.

2637. But that after that decision has been given a report should be presented to the Director of Contracts and to yourself—your representative would describe to you the nature of the decision, and give his reason for having so decided, and the Deputy Director of Contracts would report to his chief—and then you and the Director of Contracts here at Pall Mall might take such action in the form of a check in the future, as you thought the occasion required?—I entirely agree with that.

2638. I do not see how you get any more direct a system than you have to-day unless you have greater responsibility placed upon you?—Nor do I.

2639. (*Sir George Clarke.*) The responsibility to the country would be unchanged by that?—My responsi-

bility is to the Secretary of State, and I may say it is to the Army, because the Army knows that I am charged with this responsibility, and the Army looks to me.

2640. And that responsibility would not be extended by giving you the power that responsibility entails?—I do not see that it would.

2641. (*Sir Charles Welby.*) I have only this question to ask you: These suggestions of yours to-day are directed rather to making the present system work smoothly by avoiding correspondence and by bringing in the element of personal contact between the two sides, than to radically altering the system?—Yes, they are.

2642. (*Chairman.*) As we have the advantage of having you here I want to ask you just one more question. With regard to the making of contracts in the military districts, we know that contracts for forage and meat and buildings and such like are made in the districts; but do you think that the making of contracts for stores could be transferred in any way or to any extent to the districts?—I do not think so; our stores are bought as a rule in very large quantities, and they are of special patterns. Perhaps I might usefully say something on that point here. A good deal has from time to time been said by the Director of Contracts to the effect that it would be easier for the trade to supply if we were not so particular about the exact form and so on of the patterns. The necessity for an exact similarity in all the articles is chiefly owing to this: that all our stores, or the very great majority of them, are made with a view to use in the field, and that they are made with a view to packing in the field, and the illustration that I gave to Sir Francis Mowatt's Committee I might repeat here. I said: It makes no difference to you what size soap-box you use when you are travelling, but you have a dressing bag which has a partition that will only take one size soap box; if you put in too small a soap box it shakes about and gets loose; if you have too large a one, it will not go in. That is the case with the whole of our stores; everything has to be made uniform with reference to that question of packing, and you see the small tradesmen in districts and so on could not make to our special patterns, and we buy enormous quantities, tens of thousands, hundreds of thousands, and millions.

2643. I wanted to get your opinion with regard to that point?—There are little things which become important in times of great emergency. I should be very glad to have the power of going to general officers and saying to them: "We want saddles; will you get all the hunting saddles you can get? Will you buy up all the hunting saddles all over the place? here is a maximum price, and buy all you can buy up to that price"; and I would ask him to have them inspected by one of his officers.

2644. (*Colonel Miles.*) Would you increase the General's power in the district of making special purchases?—They do not make special purchases for us; I mean rather to make special purchases for the Ordnance Department.

2645. (*Sir Charles Welby.*) But that discretion you spoke of you do not possess now?—No.

2646. You cannot authorise a general officer to spend one penny on stores?—No, not a penny.

2647. (*Mr. Gibb.*) But you can in connexion with the Director of Contracts?—I suppose he could; I do not know whether I could or not, it would involve so much correspondence, discussing the question, that I should never raise it.

2648. (*Mr. Mather.*) May I ask just one final question? Instead of the departments of the Director of Contracts and the Accountant-General being placed near to your departments in localities, would it, in your opinion, facilitate matters beyond the extent to which they are now capable of being facilitated, if you had representatives of the Director of Contracts' Department at Pall Mall here going down to Woolwich and Pimlico and so on, as a regular visiting committee when required by the heads of your departments now?—No; I think you must have them there on the spot, daily entering, and hourly.

2649. The work is sufficient day by day to occupy the representatives all the year round, even in times of peace?—Yes.

The witness withdrew.

Gen. Sir H.
Brackenbury,
G.C.B.,
G.C.S.I.

22 Jan. 1901.

Colonel C. H. BAGOT, C.B., examined.

Col. C. H.
Bagot, C.B.

22 Jan. 1901.

2650. (*Chairman.*) You are Deputy Inspector-General of Fortifications for Barracks, I believe?—Yes.

2651. We wish you to give us some explanation about triennial contracts in the districts, to explain to us the system. I believe it is that triennial contracts are made in all the districts, are they not, for minor repairs?—Yes, not only for minor repairs, but for all small new works under 400*l.*, which is the limit. Further, the triennial contracts cover periodical painting to any amount. In the tender is a clause in which the contractor states the reduction or addition, the percentage on or off the schedule at which he will execute painting work.

2652. Then when the General in the district in the course of the year wants painting done or repairs or one of these new minor works, he would apply to the triennial contractor?—Yes, through the Commanding Royal Engineer, of course.

2653. And he would be the man who would execute it, subject to the rates and conditions that have been agreed upon for the triennial contracts?—Yes.

2654. Who makes those triennial contracts?—When the period is approaching at which the existing triennial contracts terminate, the schedule of prices is revised on which the triennial contract is based. That revision, if it is very extensive, may take the form of re-publication; if it is not very extensive, it takes the form of Addenda.

2655. Who makes that addition?—The Chief Surveyor in my office.

2656. In communication with whom?—In communication with me.

2657. (*Mr. Gibb.*) That is the schedule on which tenders are subsequently obtained?—Yes, on which tenders are subsequently obtained; on which they are based.

2658. (*Chairman.*) Then is the tender put out to open competition?—Yes, when the time has come, each General Commanding a district advertises for candidates for the triennial contract, and then these men apply and they get a copy of the schedule, every one of them; they also get the tender forms, and on those tender forms they make their tender, stating at what percentage, on or off, they will execute the works.

2659. And where are those tenders returnable?—Those tenders are returnable at the War Office. They come to the Director of Contracts here. The General reports when he sends forward the list of contractors who have been invited, as to the competency or non-competency of any of them. He writes against a man's name "competent" or "non competent," and if he states that they are not competent, he has to give his reasons.

2660. Then does the General communicate these tender forms to a selected list of contractors, or are they open to all the world?—Entirely open; and there is no restriction to his advertising at all. There used to be, but now the advertising and repetition of advertisements is at his discretion.

2661. Then I do not quite understand how he makes remarks upon the fitness or otherwise of the contractor?—The contractors apply to him, and he makes inquiry.

2662. But the tenders are returned to the War Office?—Yes, and he has to report to the War Office his opinion as to the competency or otherwise of the candidates who apply.

2663. (*Mr. Gibb.*) Do you mean that the Director of Contracts, after receiving the tenders, sends them down to the General for his remarks?—No, the General sends up the list with his remarks, and if there is any reference needed, it is referred back to the General to ask him about it. I can give an instance.

2664. (*Chairman.*) He sends up a list of all the people who have applied to him to be candidates?—Yes.

2665. And with that list before them the actual tenders are opened at the War Office?—Yes.

2666. That is the procedure?—Yes.

2667. Then who settles, when the tenders are opened, which tender shall be accepted?—That is done by the Director of Contracts in consultation with us; he sends over to us what he proposes and asks for our recommendation, and then we send our recommendation

across, and in consultation between the two branches it is settled.

2668. Would you know as well as the Director of Contracts—would you have communicated to you the General's opinion as to the various contractors who have applied as competitors, or would that only be communicated to the Director of Contracts?—We should see it too.

2669. Then when you and the Director of Contracts have settled on which tender is to be accepted, you would settle it together in consultation, and in the knowledge of the remarks which the General of the district might have made against the names of the contractors who are competing?—Yes.

2670. And is there any difficulty between your department and the Director of Contracts as to agreeing which tender shall be accepted?—No, not as a rule; there are sometimes differences of opinion which cause cross references backwards and forwards.

2671. If there was a difference of opinion how would it be settled?—It would be eventually settled by the Financial Secretary, that is to say, by the Secretary of State, but the Financial Secretary would act for him.

2672. Are there many references to the Financial Secretary, or do you generally arrive at an agreement?—We generally arrive at an agreement, and very seldom have to refer. I do not know of a case.

2673. If you have to refer to the Financial Secretary is there any difficulty in doing that, or any delay, or does the business go through smoothly and expeditiously?—Wherever two branches are concerned and there is a reference to both it is not as quick as if one dealt with the matter; but there is no unnecessary delay; there is no delay that can be avoided under the system as it exists. I find that the Director of Contracts tries in every way to push the thing through.

2674. You do not find it so difficult to refer to the Financial Secretary that you actually have hesitation about doing it?—No, certainly not with regard to triennial contracts, which is only a small thing.

2675. But I am only dealing with triennial contracts now?—No, certainly not with regard to triennial contracts.

2676. Then the making of the triennial contracts works smoothly?—Yes.

2677. Do you know whether the triennial contracts give satisfaction or not to the Generals? Do they complain sometimes, for instance, that the area is so large that the contract may go to a man entirely outside the district who is only working through an agent?—No, I do not think so; the area is not the whole district; the triennial contract does not affect the whole district. Take, for instance, the Dublin district; there are at least seven or eight triennial contracts in that district. In Dublin itself there are three.

2678. Then anybody in any part of the kingdom might get that contract?—Anybody in any part of the kingdom might; but, of course, they would not from this side of the water; no man would tender from England as a rule.

2679. As a matter of fact it is generally a man in the district who gets the contract for that district?—Generally a man in the military district; not invariably, of course, but generally.

2680. (*Mr. Gibb.*) Who settles the district to which each triennial contract is to apply?—That is settled by long prescription.

2681. It is an old standing thing?—It is an old standing thing; I cannot tell you how it was originally settled, or who settled it.

2682. Have you had any questions raised about the districts being too small or too large, or antiquated in their boundaries?—I raised such a question myself in the case of Dublin, which we spoke of before, where there are three triennial contracts, and the rates varied so much in the different portions of that not very large town that I suggested they should get one triennial contract for the whole, but it did not meet the views of the General Officer, he said: "No, he should prefer it to stand as it was."

2683. (*Sir Charles Wolby.*) And he had the last word?—Yes, and we took his recommendation. We always do if we can. We interfere as little as possible.

2684. (*Mr. Gibb.*) Whose duty is it to see that the districts are brought up to date and properly settled? Is it the duty of the Inspector-General of Fortifications?—It is mine as regards barracks. It is the Inspector-General of Fortifications' duty, of course, but I am responsible to him.

2685. I mean the geographical limits?—That is all kept in my office.

2686. I mean the geographical limits of the triennial contracts?—Yes, it would all come through me; if the General had any proposition to make as to any alteration it would come through me, and if there was any alteration the concurrence of the Director of Contracts would be necessary.

2687. Who would be responsible for the initiation of a proposal assuming that the circumstances had changed, and that it was desirable to alter the limits of a contract district?—The General Officer. We should not find it out otherwise.

2688. You consider it is his duty to raise the question rather than yours?—Yes. In the case I mentioned I had been Commanding Royal Engineer in Dublin before, and I know where the shoe pinched, but I should not know in other cases unless the General Officers told me.

2689. Unless the General Officer made a suggestion you would simply repeat the triennial contract of the year before?—Yes, as a rule, certainly we should.

2690. Have you had any complaints with regard to difficulties with the contractors through not having competent agents on the spot?—Constantly in Ireland with the small ones, very often.

2691. And in England too?—No, I have had no complaints in England since I have been in my present post.

2692. I suppose in a contract for works, it is very desirable, is it not, to have a local contractor who has got men on the spot?—Yes, certainly, if he is fit in other respects.

2693. Do you often accept tenders above the lowest, or do you generally accept the lowest tender?—We go very seldom above the lowest tender, after examination of course.

2694. Can you give the Committee a general idea whether, as a rule, the triennial contracts are held by local contractors?—Not necessarily by local contractors in the town or area concerned.

2695. Then is it common that contractors outside the contracting area get the contract?—It is not uncommon. I suppose you would call it outside the contract area if a contractor at Maidstone held the triennial contract for Shorncliffe.

2696. If those places are not in the same district?—They are not in the same district. Maidstone is in the Thames District, and Shorncliffe is in the Dover or South Eastern District.

2697. What was in my mind rather was, supposing that a Birmingham contractor got the triennial contract for the Eastern District?—I have not got the list of triennial contracts in my head, but I should see no objection to that; and I am perfectly certain that a distance like that has separated the contractor from the contract area at times, and does so in some cases now.

2698. Do you put into the contract any condition as to having competent agents in that place?—Yes, the contractor or his agent can be called upon to reside within three miles of the works.

2699. And do you in fact insist upon the agents residing within three miles of the works?—That would be a question of practice in districts. So far as the district in which I was Commanding Royal Engineer was concerned, we did certainly insist upon it.

2700. And according to your personal experience, have you had any difficulties in that respect?—In the instance in which I had to insist upon it, I had difficulty, so much so, that I threatened to terminate the contract, and eventually I came off victorious; the man gave in.

2701. You spoke of an appeal to the Financial Secretary, if there were a difference between you and the Director of Contracts. Would the papers about the matter be sent by you direct to the Financial Secretary, or would your case be transmitted to him

through the Director of Contracts?—We are on triennial contracts now. We have never had a case of the sort; we have never had a dispute with the Director of Contracts that I can call to mind. On other points we have.

2702. In such other cases are the papers transmitted through the Director of Contracts, or sent direct by you?—I think, as a general rule, in the few cases that have occurred, the Director of Contracts has put the papers up, as we say, to the Financial Secretary, and I think, myself, that very possibly, in most of those cases the Financial Secretary hears more of the Director of Contracts' side than he does of our side; on the question of fines, for instance, or anything of that sort. That is my opinion.

2703. Do you attach any importance to the ability to send your own case direct to the Financial Secretary in case of difference as compared with sending it through the Director of Contracts?—Yes, but I know of no prohibition against our sending him our case direct. If we chose to ask that it might be so referred, it would be so, no doubt, but the usage is the other way. He, however, sees the discussion in the papers.

2704. (*Mr. Mather.*) You have no complaint to make of the system under which at present you carry out all these works that you have described?—The triennial contracts do you mean?

2705. Yes. As between your department and the General Officer Commanding and the Director of Contracts, the system works perfectly well, I understand from your evidence?—Yes.

2706. You have no suggestions to make as to any possible improvement, to avoid delay I mean, or to avoid correspondence or any clerical work?—Not as regards triennial contracts.

2707. What sum does a triennial contract amount to on an average in a district, say, like Portsmouth, roughly speaking?—I cannot tell you without reference.

2708. It varies very much?—It varies very much.

2709. Are you responsible for the maintenance of the barracks in perfect condition always?—No, we are not personally responsible here; the Commanding Royal Engineer, under the General Officer, is responsible for that.

2710. Do you inspect barracks?—Yes, I do inspect barracks. My business is to inspect barracks.

2711. And would you report to the General Officer Commanding if you consider they are needing repairs or needing some important alteration?—I should certainly do so.

2712. It rests with you, I mean, to ascertain?—Yes, as far as my inspection goes.

2713. And in carrying out any work that has to be done in consequence of your report, would the initiative be with the General Officer Commanding?—It would be entirely left to the district. We should not order that such-and-such repairs were to be carried out.

2714. (*Sir George Clarke.*) I take it that your principal objection to the present system is in the circumlocution that it involves owing to the roundabout correspondence between the contractor, the War Office, the other branch of the War Office, and then back to the district?—You mean in case of any disputes or anything of that sort?

2715. In case of any reference of any sort?—There are very few references on account of triennial contracts.

2716. I am not talking of triennial contracts, but there are other barrack contracts?—Yes.

2717. In those cases are there sometimes references that take a good deal of time in the roundabout way that the correspondence would have to go?—Yes.

2718. I take it that the Director of Contracts has no means of forming any independent judgment as to whether prices are high or low in the building trade; he has no surveyor to help him?—No.

2719. Therefore he has no means of forming an independent judgment as to the highness or lowness of prices in the building trade?—He has no means that I know of. I suppose he could make inquiries, but he has no machinery that I know of for forming an opinion.

Col. C. H. Bagot, C.B.
22 Jan. 1901.

Col. C. H.
Bagot, C.B.

22 Jan. 1901.

2720. Then, do you see any advantage arising from his intervention in the matter of contracts in the building trade such as you deal with?—Not in the building trade.

2721. Not in any of your work?—Not in the building trade, certainly. In the case of stores and things of that sort he has a more perfect registration of firms who supply those things—ironmongery, and that kind of thing—than we have, but that is only because he is there. We might just as well know it as he.

2722. The Assistant Director of Contracts informed us, at Question 1988, as follows:—"A Royal Engineer Officer, at Salisbury Plain, has given an order for some huts. He had no authority to order them, and, moreover, the huts are not required; so that not only has he ordered something he ought not to have done, but he had no business to order at all. We have had to report that case, and he is, I believe, to be reprimanded for going beyond his instructions." Perhaps you might like to give some little explanation of that case, which is probably rather simpler than it seems?—These huts have been built in a good many places; there have been a great many of them, and they were started in a tremendous hurry and under great pressure, and the contracts were all made though the War Office because of the clashing that would inevitably result if each individual district concerned were to call upon the trade to tender. I need not go further into that, but the fact remains that there was a great deal of pressure and a certain amount, no doubt, of confusion. The huts to be constructed in this particular instance were limited; there were a certain number laid down, and the contract was let for them. It was intended, if funds and time permitted, to supplement these huts and go on further, and in consultation with the Quartermaster-General, certain huts were detailed for the various places, and among them a certain number for Bulford. This was communicated to the Engineer Officer who was in charge of the works there, and he was informed that these huts would be added; but the last paragraph of the letter telling him so, directed him to report how he proposed to carry out the work, and to obtain tenders for them. It did not say in so many words that he was to refer those tenders to this office, because he was expected to follow the usual custom; he, in an excess of zeal, ordered the huts straight off, knowing the pressure, and knowing the importance of getting these huts in hand at once, or they could not have been worked on the funds available this year. Now we come to the 31st March, to that difficulty; we are tied and bound by the 31st of March, the end of the financial year. If we have funds we try to get the Generals and everybody concerned to expend the funds allotted for any one year in that year, in order to avoid all bother of re-providing them next year, therefore they were all pressed a great deal to shove on, and the Engineer Officer thinking to shove on, ordered his huts of the contractor at once, and got his tender all right; but did not send it forward through pressure of work. If he had sent it forward, there is little question that it would have been accepted, and the huts would have been begun and built under due authority. Some time afterwards it was decided that these huts were not to be built; but if he had followed the regular course, the huts would have been built all the same. So that it is only through his minor irregularity of not sending forward the tender at once, but of ordering the work himself that he has committed himself to ordering huts which were not wanted.

2723. (Chairman.) That is to say, that through excess of zeal he ignored some of the regular steps which are laid down?—Under a misapprehension no doubt, an entire misapprehension.

2724. If he had followed the usual routine, would the huts have been got in time all the same?—I think so; the tender would have come up, and I am pretty well sure that it would have been accepted, and the huts would have been built under due authority.

2725. (Sir George Clarke.) But my point is this: that the Assistant Director of Contracts has informed us not only that there was no authority, but that the huts were not required; you say that the huts were required, and that he was merely guilty of not complying with the details of formality?—That is because the requirements were afterwards altered. The whole question of these huts is a little complicated; they were put up under pressure to meet a want that was supposed to be coming on at once, which fortunately

did not occur; the original intention was to complete them to a much larger extent than the present intention. The present Secretary of State went into the matter after this first decision (not of his but between the departments concerned) that these huts in question were to be added. He went into the whole question, and he decided that as few huts as possible should be added to any of these things, and under that decision we cut out those huts.

2726. Then it is not a question of the money being thrown away?—It is not thrown away; I will tell you what the huts are, they are for militia battalions and only to be occupied during the training of the militia; therefore, it was considered that huts for officers' servants, near the officers' quarters, so that the servants could have a place for brushing the officers' clothes, and that sort of thing, were necessary. Afterwards, when we had to cut them down and to reduce the thing to the lowest limits, it was decided that tents should be pitched, or something of that sort. Of course it adds greatly to the comfort of the officers, and for the regular infantry such huts are provided.

2727. (Chairman.) The number of huts was afterwards cut down, you say?—Yes.

2728. So that having regard to the number of huts that were ultimately decided upon, these huts were unnecessary?—Yes.

2729. Supposing that the officer had followed the usual routine, would that have enabled the number of huts to be cut down according to this subsequent revision of the scheme. I mean, if he had followed the usual course, when it came before you would you have said, "Oh no, the number of huts now is to be cut down; we do not want these"?—No, because if he had sent his tender in at once, directly he got that letter, the second decision cutting down the huts had not then been arrived at.

2730. (Sir Charles Welby.) It was not arrived at until December last year?—No.

2731. (Chairman.) So it resolves itself entirely into the officer having acted under a misapprehension?—Yes.

2732. (Mr. Gibb.) It is an illustration of the disadvantage of Annual Votes?—Yes, exactly, we are always in a hustle about the Annual Votes.

2733. The officer acted very hurriedly lest he should lose his Vote?—Yes.

2734. Do you think that the fear of losing the Vote often causes unwise hurry on the part of the departments?—I should say it did.

2735. (Sir George Clarke.) Then, to sum up the result of the Salisbury case, whether an irregularity had been committed or not, the huts would have been bought; therefore, so far as the public is concerned, the result was just the same?—Most likely. I cannot say absolutely that the Director of Contracts would have concurred in accepting the tender when it came up, but, generally, it would have been accepted.

2736. One other question. When it happens that the General Officer reports a case of corruption or bribery on the part of a contractor, what happens; would the General Officer report to you?—I should expect that the letter on reaching the War Office should be sent to my branch.

2737. Is that done?—No, I know of a recent case in which it was not done.

2738. Could you state that case?—There was a case at Fethard, in Ireland, connected with these same huts. The contractor had tried to persuade the acting engineer, I think it was, in charge, a temporary Civilian, to pass bad material, to which he had very properly objected, and he took him aside into some side room, and said, "Here, you may like a little present," and offered him a couple of sovereigns. I think those were the facts. That was reported, very properly, at once to the War Office, but it did not come to my Branch, and I think it ought to have come to my Branch.

2739. In that case there was an attempt to bribe one of your officers?—Yes.

2740. And it was not brought to your notice?—No, the letter was written to the Under Secretary of State reporting it, but when it got into the War Office it went to the Director of Contracts.

2741. And it is your opinion that a case like that of attempted bribery of one of your own officials,

ought, as a matter of ordinary routine, to have been referred to you?—Yes.

2742. (*Sir Charles Welby.*) But was this one of your officials?—Yes.

2743. Who was it?—It was one of the temporary Civilians whom we have got looking after the huts.

2744. He did not form part of the regular staff of the General Commanding the districts?—For a time.

2745. Would not the superior officer to whom it would naturally be reported, be the General Officer?—It was the General Officer. There you get more circumlocution, because it was reported at Fethard to the General Officer at Cork, who reported to the General Officer Commanding in Ireland, who reported to the Under Secretary of State.

2746. (*Colonel Miles.*) But it did not reach you at the War Office?—Not until a long time afterwards; I think it was nearly a couple of months before it came to me.

2747. (*Sir George Clarke.*) And you think that when a General Officer reports a case of that kind it should certainly, as a matter of routine, come to you in the first instance?—Yes, because we should make our recommendations upon it.

2748. (*Sir Charles Welby.*) I should like to bring you back for one moment to triennial contracts. I think I understood you to say, that when a contract was near the end of its term the schedule was revised in your office?—Yes, revised by the Chief Surveyor.

2749. The Chief Surveyor or yourself?—He submits it to me.

2750. From what point of view is it revised; what are the sort of questions?—The advances in prices of building material and in wages, and everything of that sort.

2751. It does not affect the question of inserting any fresh items?—Yes, it does.

2752. Does the General Officer Commanding have no voice in it?—No, except that we refer to him, in the first instance, as to changes in prices or anything of that sort. That is correspondence carried out in the ordinary routine. If we want to know anything further about the price of labour or materials in the district, we should refer to him again.

2753. (*Mr. Gibb.*) But do you fill in the prices or does the tenderer?—We fill in the prices in the schedule. I can give you an instance. There are many things which divide themselves up into material and labour, but it would be very inconvenient to put down so much wood and so many pounds of nails, and so much labour, and all the rest of it, and to work it out like that, your forms would be enormous, so we group the things; a floor, for instance, we do by the square, the complete square. There is a specification in the schedule how it is to be laid, batten widths and so on; and opposite to that is the price per square. That is the principle that is carried out through the whole of the building works, and the contractor tenders at so much percentage on or off the price we enter.

2754. (*Sir Charles Welby.*) Then what the contractor tenders for is the rate for a certain class of work, not the particular articles?—He tenders on the whole schedule. He examines the schedule and taking the floor, says:—"This satisfies me; I will tender at the 'schedule prices,' or at so much on, or he says:—"I want to compete with somebody else, and I think I can go so much per cent. lower."

2755. (*Mr. Gibb.*) Does he often go down to a lower price than yours?—Yes, frequently, competition comes in there. But when there is no competition he very often goes above. At the Curragh the triennial contract is 25 per cent. above.

2756. (*Sir Charles Welby.*) May I take it that you would not make any alteration in the schedule without giving the General Officer Commanding an opportunity of expressing his views?—We should always refer to the General Officer Commanding if there were any important changes.

2757. And he would have an opportunity of suggesting alterations?—He is bound to do it; he is called upon to do it.

2758. (*Mr. Beckett.*) How do you acquire the information that enables you to construct the schedule,

say in the case of a floor?—From the price lists of manufacturers and timber merchants and all that sort of thing, and inquiries, as I said before, in the district.

2759. It is all done in your office?—It is all compiled in my office.

2760. (*Mr. Mather.*) Does it give you a large amount of work?—It is a running order now, of course. The first schedule, of course, gave an immense amount of work, but this schedule is so valuable that outside people buy it freely and offer to tender for things in order to get hold of the schedule.

2761. (*Mr. Beckett.*) And you are quite satisfied that your information is always up to date?—It is now, because this is the end of the first year of the triennial contract.

2762. (*Sir Charles Welby.*) Could it not be equally well revised by the General himself in the district instead of in your office?—He is called upon to mention in what particulars he recommends it to be revised.

2763. But the discretion in the matter rests with you?—Yes.

2764. (*Sir George Clarke.*) But there are certain particulars in which the General Officer would not be competent to revise it?—Yes; ironmongery and such things.

2765. (*Sir Charles Welby.*) And general stores?—So far as they come under the schedule.

2766. (*Mr. Gibb.*) Do you think the system of filling the proposed price in the schedule and leaving the contractors and tenderers to propose percentage additions or subtractions leads to a high price of work?—I do not think so.

2767. You think it is a good system?—I think competition keeps prices down.

2768. In one sense, yes, but if a proposal is made by a person seeking work to be done, fixing, we will suggest, a high price, most tenderers would take him at his word, and put in the price proposed, would they not?—Yes, that is so, but there are an enormous number of items in this schedule in all the various building trades.

2769. What I mean is that where the proposed price is high, they would adopt it in their tender; where it is low they would tender at a higher price?—Of course they would.

2770. And does not that lead on the whole to a higher price for the work than if the tenderers had, according to the usual custom, to fill in their own prices?—I do not think it does.

2771. (*Mr. Mather.*) What object do you gain by drawing up this list of prices for the builders? what do you gain by it?—Of course it saves an enormous amount of trouble in checking the tenders. When the tenders come in we should have to go through every price in this long thing; we should have to serve the schedule out in blank, and it would take a long time. When a man is suddenly asked, "What would you do this thing for at so much per square?" he has to take up a good many trades and different materials, and so on.

2772. (*Mr. Beckett.*) In any case he has to work out his prices; he will not take yours?—But he takes them out here and there. The contractors have such confidence in our schedule; as a matter of absolute fact, from long years of experience, it is such a well-known thing, that they tender on it with perfect confidence. What a contractor does when he tenders on it is to go for the items that he knows most often occur. He sees a price for brickwork in our tender, and he will probably say, "That is quite enough for me," if he thinks there is much brickwork in this triennial contract. Or if he finds a very low price for it, then, of course, he would put on a higher price in the tender. Those are the things they chiefly go by; they would not poke into a lot of small things that seldom occur.

2773. (*Mr. Gibb.*) And you do not think that that confidence is based on the belief that your prices are high?—No; I have myself confidence in my own schedule.

2774. And you say that the contractors have confidence in your schedule?—Yes.

2775. That might be from a knowledge that the prices were high, and that they would be better remunerated?—If you ask me, I do not think the prices are

*Col. C. H.
Bagot, C.B.*

22 Jan. 1901.

Col. C. H.
Bagot, C.B.

22 Jan. 1901.

high. I think the prices are fair. They vary for the different districts; there is not one schedule for all.

2776. (*Mr. Mather.*) You would not draft a schedule of that kind for a new building; it is only on these triennial contracts?—That is an open question. There are people who think it would be better if we priced

our own bills of quantities than call upon the contractor to do it.

2777. But you do not do it?—No, never.

2778. It is only on triennial contracts?—Only on triennial contracts.

The witness withdrew.

Adjourned.

EIGHTH DAY'S MEETING.

SEVENTH DAY'S EVIDENCE.

At the War Office.

Wednesday, 23rd January 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary.*

Mr. ALFRED MAJOR (Director of Contracts), further examined.

Mr.
A Major.

23 Jan. 1901.

2779. (*Chairman.*) There are one or two points on which I should like to hear your views quite clearly and briefly, and then I should like to ask you, with regard to particular cases of alleged delay, for the explanations which you have to give?—Certainly.

2780. One point which I should like to get quite clear from you, is with regard to putting contractors on the list; do you make careful inquiries as to the capacities of the contractors before putting them on the list, in the way of viewing their establishments, or would you simply take them with a banker's reference, and ordinary recommendations?—Not only a banker's reference; we have a certain schedule of questions, we inquire what orders they have executed before.

2781. Supposing they are new men, who wish to come on the list?—I mean that we ask about their orders for other people, and then we refer to the people for whom they say they have executed orders. We look upon the extent of the orders, and we get reports from them that the orders have been executed satisfactorily.

2782. Do you, in any cases, send down and view the establishments, and form an idea as to their capacity?—We do sometimes, but, as I said before, we have been for some time past very limited in staff, and it has been a difficult thing to do. But what we do, which is rather a better safeguard than anything else, is this: Those people having been put upon the list, upon the information that we have obtained, both as regards their financial position and their previous experience in executing orders; we never give to such a firm an order in the first instance of any material importance; we always give them a small trial order to see how they get on. If that trial order is satisfactory, then, perhaps, on the next tender, or, if in between the time a large order comes in, we may have time to visit them, and, perhaps, if we got a very favourable report upon them, we should give them on the next tender a larger order. That is the principle upon which we act generally.

2783. Now, as regards the infliction of penalties, there have been cases, I understand, in which you have disagreed, say with the Director-General of Ordnance, as to the amount of penalty to be inflicted. Unless you prevailed on the Director-General of Ordnance to accept your views—unless you persuaded him, which might happen in many cases, would you decide to act

otherwise than he wished, on the authority which has been delegated to you, or would you in every such case refer, as a matter of practice, to the Financial Secretary?—I always refer to the Financial Secretary.

2784. Have penalties been more rigorously enforced of late?—I have enforced a great many more penalties of late than previously, because the circumstances have been very much altered. In a great many cases lately, of course, arising out of the war, we have paid a special price for speedy delivery; and when cases come before me in which, although we have paid that special price, there has been a delay, I think those are cases in which decidedly it is right and proper that fines should be imposed. An addition to the number of fines has arisen really from altered circumstances. Another thing that you have to take into consideration, and which we have taken into consideration, is that, in a time of war, very considerable inconvenience, or very much graver inconvenience, is caused to us from absence of delivery. I think that is a time also for being more severe in the infliction of penalties. That is the only reason; it is not in consequence of the Report of Sir Francis Mowatt's Committee; but fines have been imposed to a greater extent lately because circumstances have required it, and have called for them.

2785. The Report of Sir Francis Mowatt's Committee has had no influence upon the enforcement of penalties, one way or the other?—I do not think it has at all.

2786. In the case of a tender, when the requisitioning department recommended such and such a tender to be accepted, and you disagreed with them, if finally it was decided to accept a tender other than the one they recommended, would you do that on your own authority, or, in the case of difference having arisen, would you invariably refer to the Financial Secretary?—It would go to the Financial Secretary.

2787. Invariably?—If that were not done it would be an oversight.

2788. Are you acquainted with the very detailed set of instructions issued at the Admiralty to the Department of the Director of Navy Contracts?—I have seen them.

2789. There is nothing corresponding to them at the War Office, is there?—No, my duties are simply arranged practically upon the Orders in Council, or the

Supplements to those Orders in Council, in a general statement.

2790. (*Sir Charles Welby.*) The details of office procedure?—Yes.

2791. (*Chairman.*) Do not you think it would be an advantage if such a set of detailed instructions as exists at the Admiralty were drawn up both for your department and also for the departments you have dealings with, so as to know exactly where you were, where your functions begin and where they end?—There are, of course, in the instructions issued by the Admiralty certain powers given to the Director of Contracts, which I do not possess, and I think it would be, perhaps, a very great advantage to the public service if I did possess them.

2792. I am not talking at this moment of changing your powers, but taking your powers as they are, would not it be an advantage that detailed instructions should be issued to the Contract Department so that the Contract Department should know exactly where it is, and that other departments should know exactly where your functions begin and terminate?—We do know exactly where we begin.

2793. You know?—And the other departments know exactly too.

2794. Then you would see no advantage in such a set of instructions?—I really hardly think they would be of much advantage. What I mean to say is this: that the instructions would be no more binding upon the departments than the office memo which is already issued defining my functions. If they will, as they do, deliberately invade and intrude upon my functions the fact of issuing regulations will not in any way prevent them from doing so. The reason, if there is any friction, why friction takes place under the present system is simply and only this, that there is, and has been, during 18 months a continual desire and tendency to intrude upon the functions which are confided to me by the Secretary of State. I have as consistently (I think it is my duty in acting loyally to the Secretary of State) tried to resist those intrusions. I do it in large cases as well as in small cases. When Sir Redvers Buller had been appointed Commander-in-Chief in South Africa, just before he was departing he came into my room and said, "Now we want some very large quantities of timber; this is required of a specially good character for the purposes of making trestle bridges as we advance." He brought in with him Mr. Eyles, a member of the firm of Gregory and Eyles, and he said, "I want you, Major, to let Mr. Eyles effect these purchases." I said, "No, Sir Redvers, my business is given to me by the Secretary of State, to make purchases of stores for the Army, and I am prepared to do so, and I have the power to do it quite as well as Mr. Eyles." He turned round to Mr. Eyles, and said, "Eyles, I have known this fellow for 20 years, and if anyone will do it I am convinced he will do it." I had that same day an order come in for about 4,000 loads of timber. I can absolutely say that no person could have bought those 4,000 loads of timber and put them on board ship, as I did entirely on my responsibility, quicker than was done by the Director of Contracts. Of course Mr. Eyles could not have done it in anything like the time. The very same day that that order for timber came in, which the timber people said was "a mighty big order," the half of it was placed, and the whole was placed by the next day. Within a few hours I had all that timber being ripped up; we wanted 16 inches by 8 inches, a difficult thing to do, and all these 16-inch logs, 70 feet, 50 feet, 24 feet, had to be ripped up. Within 24 hours of the orders being placed those logs were in the sawing mills being ripped up to the lengths that were wanted. I had six of the largest saw mills working night and day, Sundays included, all other orders being put aside. I went to the Admiralty, and I asked, "Can you provide me with a ship to take these out?" They said, "No, we cannot." Then, I said, "If I have power to do it, I will do it." I chartered a ship, wrote to the Surrey Commercial Docks and said, "You must give this ship the best possible position to load 'night and day,' and they wrote back a most courteous letter to say that they would do anything I wanted. I got the order on Thursday, and on the Tuesday I think several of the barges were alongside waiting to put the timber on board the ship. I say, therefore, when we have a department with the power that we have, why should we let other people take up our duties? There is not any one of these cases which

a 15090.

have been brought forward against me by the Principal Ordnance Officer in regard to which I do not unhesitatingly say that we could have done better than he did.

2795. Assuming for the moment that this tendency to intrude upon you and invade your functions does exist, do you not think that a set of clear and detailed instructions to your department, more comprehensive than the two paragraphs which cover them in the War Office List, would protect you against such invasion and intrusion?—I think that it might assist if the departments would loyally carry out their duties and leave me to carry out mine. The system of doing the work is exactly the same in the War Department as it is at the Admiralty. No friction exists at the Admiralty. But why? Because there is discipline in the Admiralty.

2796. (*Mr. Mather.*) But you are aware that a large portion of the contracts in the Admiralty are reserved entirely to the Controller of the Navy?—Some of the important contracts go to the First Lord, and the First Lord is the buyer. If the contracts here could go to the Secretary of State it would be all right—my functions would not be necessary.

2797. (*Chairman.*) I think we will turn now to one or two particular cases in which it is alleged that delays have arisen. Have you a copy of the evidence before you?—I have a copy before me of Colonel Steevens' evidence.

2798. Precisely; it is to Colonel Steevens' evidence that I am now referring. At Question No. 552 there is a question as regards contracts for tents?—Quite so. As regards those tents, there was enormous difficulty in getting the quantity of tents that were required suddenly and in a very short time for this war. There was only one firm of tentmakers working for us at the time. It was a peculiar system, that is to say, tent duck was issued from Woolwich, and it was simply sewn up in the factory by the contractor. The demand was about, on an average, 4,000 tents a year. Suddenly, during the course of the war, and during the course of the first four months of the war I think, I was asked to provide from 40,000 to 50,000 tents; and, all I can say on that subject is, that there was not time given to develop or to expand the trade sufficiently to meet that enormous demand. The difficulty was, first of all, in getting sewing machines; sewing machines could not be got in the time which was promised by the contractor; and, furthermore, they could not get the labour, or teach the labour in the short time that was allowed. What I say, in regard to that matter, is that no one in this world could have got those tents quicker than I did. I will hand in to the Committee a statement of what we did in regard to tents; I do not know whether any member of the Committee will care to read it, but here is the exact statement that has been before the Secretary of State. We were, as regards tents, actually beggars, not choosers, and this is an exact statement of what we did in regard to every tender that came in. Sometimes I got a demand for 10,000 tents. Where are you to go in this country for 10,000 tents? It is simply impossible to get them. At this present moment, by our having developed the trade, I can get any quantity of tents, but I could not at the earlier stages of the war. The whole question of delays, and the impossibility of getting stores of these enormous quantities, is mixed up, of course, with the question of keeping proper reserves. If you have proper reserves, and if time permits, these things can be got; but no person in this world, when we have been in the habit of getting 4,000 tents a year, can develop the trade, or obtain 50,000 tents, in the course of four or five months. There is the statement for the members of the Committee (*handing in a document*).

2799. But I think the gist of the allegation is, that these orders for tents were piled up upon firms who had already shown their incapacity, and that, according to Colonel Steevens, there were other firms in existence who would have been more capable of supplying the tents?—That I absolutely deny.

2800. There were no such firms, you say?—Every firm in the trade was being employed by us. The only reason why orders were being piled up on one particular firm was that there was no one else to place them with, and because that firm had promised to put on extra plant, and they were doing at the time everything they could to enlarge the production.

2301. (*Mr. Gibb.*) But, you see, Colonel Steevens, at No. 553, said that the firms he referred to were afterwards employed?—Quite so; we discovered them and

Mr.
A. Major.

28 Jan. 1901.

Mr.
A. Major.
23 Jan. 1901.

employed them. He did not discover them and employ them.

2802. (*Chairman.*) Then they were in existence. Just now I understood you to say that they were not in existence; now you say that you discovered them; therefore, they must have been in existence?—We asked them to do the work; we begged of them to do it; we gave them high prices to do it.

2803. (*Mr. Gibb.*) They were firms who had not previously made tents, and they were induced by your representations to begin making them?—Quite so; that is the position.

2804. (*Chairman.*) What does the making of tents consist of—sewing duck which has been issued for that purpose?—In the early stages of these demands for tents, we were rather handicapped from that cause; that is to say, that the Director-General of Ordnance would not take any tents but those that were made out of the duck which he supplied from Woolwich; and the consequence was that it was merely a question of sewing and finding people with sufficient experience and sufficient sewing machines to do the work. If the Director-General of Ordnance would have taken cotton duck, of which the tents are made in America and Germany, or if he would have taken a supply of tents from Germany, of which we had a large offer, we could have got them sooner. He had to take them at last, but he would not take them in the first instance.

2805. He refused to take them from Germany, you say?—Yes.

2806. Did you make him acquainted with the fact that you had an offer from Germany for them?—Yes, certainly; and he refused also to take tents made of cotton duck, although, as I said before, they were taken afterwards, and we bought tents in Germany, we bought tents in France, and we bought tents in America.

2807. (*Mr. Mather.*) These tents are all linen duck, I suppose?—All the original tent duck is a linen duck.

2808. And do you get that entirely from this country?—Yes, from an English maker and the large makers in Dundee chiefly.

2809. Who is the English maker; where is the firm?—Down in the East End. You see, unfortunately, with regard to the English firm, they were in arrears from the fact that they were absolutely filled with orders before the war began, and, of course, many of the orders that we put out went down to the same neighbourhood, and actually deprived them of the power of meeting the demands, because every order was put out at a higher price, and all the people who got the higher price were taking away his labour and paying a higher price for it.

2810. (*Chairman.*) Would you please look at No. 561 on the next page. There is a statement made there by the witness that a contract was made on the 19th of May 1898 for 7,900 packing cases, that repeated attempts were made to hurry up the contractor by way of letters, I understand, from your office, and that repeated replies were received putting you off, stating that the contractor hoped to get his elm from America, and so on, the consequence being that, although the order was given on the 19th May 1899, on the 6th February of the next year the contractor still says, "Nothing definite yet; expect a mail to-morrow?"—I have not yet got the papers in regard to those packing cases, and I should like, if you would allow me, just to refer to them.

2811. Then would you kindly let the Committee have a statement in regard to this particular case?—I will. (*See Appendix V (C) (1).*)

2812. (*Mr. Mather.*) Are you familiar with the case which was stated by Colonel Steevens at Question 553 about tent mallets; the statement is that a quantity had been delivered, and it was found on delivery that the handles would not fit the heads?—Yes.

2813. Did you hear of that case; was it referred to you after it was discovered that the handles would not fit the heads?—I have no doubt it is perfectly true that there was a difficulty in getting tent mallets—tent mallets were somewhat in the same position as tents. I think Colonel Steevens says somewhere in his evidence that tent mallets were mainly made in the ordnance factories; but the demands for tent mallets made upon us previously had never exceeded 6,000 tent mallets in the course of the year; and then I was suddenly called upon to provide about 200,000 tent mallets. The firm to which he refers as having been given these tent mallets

was a firm who were really one of our best contractors in the way of tent wood turnery. With regard to tent pins, and things of that sort, they were excellent contractors, but they did not seem to be able to make these tent mallets. The only reason I should say why an order for tent mallets was left with this firm—and, mind you, I was getting large quantities of tent mallets delivered from other firms—was because I could not place them anywhere else, and they were always promising them, and said they would deliver them, and that they had the machinery coming along, which they said would enable them to make them, but they could not pass them for some reason or other.

2814. They misled you?—They misled me absolutely; but there was no damage done to the public service in getting these things, because I watched this question of tent mallets every week. The moment that any one of our contractors who was making tent mallets delivered an order, I gave him a further quantity, and kept him going, but I never could place the quantity that I was required to get.

2815. (*Mr. Gibb.*) Were the handles and the heads made by the same people, and at the same time?—The order was given for the complete mallet.

2816. And if there was a want of harmony between handle and head, it was due to some mistake on the part of the manufacturing firm?—Quite so.

2817. You spoke of an order for 200,000 tent mallets, and the evidence is a rejection of 500. Do you know whether that was substantially the only rejection out of a total of 200,000?—Oh no, it does not indicate that at all; there were a good many more, probably, than those rejected, but at a moment of great pressure Colonel Steevens heard that there were a few that had been rejected. The inspection of these tent mallets, generally speaking, is fairly severe; I do not say that it was at all too severe. I am not, for a moment, making any charge against the Inspection Department with regard to these tent mallets; but I say that we went to every firm in the country that could possibly do the tent mallets, and invited them to do them, and gave them to them at any price.

2818. (*Mr. Mather.*) In the case of tents, and also in the case of tent mallets, knowing the extreme urgency, that these articles were wanted immediately, did you send out any of your agents or inspectors to see whether these firms were really capable of doing the work they promised to do, or did you depend entirely upon their promises?—And seeing the contractors.

2819. In your office?—Yes.

2820. But you did not send out your agents or inspectors to see whether they had the capacity to do what they had undertaken?—No.

2821. (*Mr. Gibb.*) I think you said practically that you knew they were incapable, but that there was nobody who was capable at the time?—Yes, that was so. But, with regard to tents, we did send down on two or three occasions to see what they were doing.

2822. (*Sir Charles Welby.*) But you have not really a sufficient staff in times of pressure to send anybody to look after these people?—No, it would be quite impossible to send people to visit all these firms, although we did do it as far as we possibly could and when it was urgent.

2823. (*Chairman.*) Would you look at Question 670. Colonel Steevens there said that on one occasion he authorised the local purchase of some field service bedsteads which were urgently required in the Western District, and which could not have been obtained by any other means than by local purchase. He states that those bedsteads were bought at 4s. 7d. each, and that now a question has been raised with regard to that price, "although on referring to a contract which was made by the Director of Contracts at the same time for the large number of 10,000, I find he placed the contracts at 7s. 5d., 7s. 9d., 6s. 1d., and 7s. 9d., "with four different contractors"?—I have not seen the pattern of the bedsteads that were bought at 4s. 7d. each, and there is nothing to show that those bedsteads which were bought at 4s. 7d. corresponded in any way with the bedsteads that we placed at 7s. 5d.

2824. But you would have the same class of bedsteads, would you not?—Those were bedsteads that were bought locally, and they were not subject to the inspection that occurs at Woolwich.

2825. Were they subject to any inspection at all?—Only a cursory inspection by the officers, probably, who bought them; that is not the inspection that takes place at Woolwich. Take the tent pins, for instance. It has been alleged against me that a General Officer Commanding goes and buys 10,000 tent pins, and pays something a little less than I buy them for. I say: Very well; let me see those tent pins. I had samples up in the case which was alleged. I sent them down to Woolwich for inspection, and they pointed out no fewer than five particular points in which those tent pins were wrong, and they said that the tent pins delivered to that order would have been wholly rejected; they would not have passed one of them. And as regards these bedsteads, there is no comparison to be made, on account of the price, unless I can see them, or unless the Inspection Department tell me that the bedsteads that were passed on that occasion correspond with the bedsteads that I bought. There is really no comparison.

2826. But they would be the same class of bedsteads?—They might be, but the price of 7s. 5d., at which I am buying 10,000, and the price of 4s. 7d. show that they were totally different articles; that is quite sufficient. We buy bedsteads cheaper than anybody else in the world can buy them. And, further, the only objection taken to that transaction was that the Principal Ordnance Officer there exceeded his authority. He had no right to approve of 2,000 bedsteads being bought without coming to me. If those bedsteads had been urgent, I should have sent somebody to buy them.

2827. I am not now on the point of the Principal Ordnance Officer having exceeded his authority, but I am on the point of the difference of price. I presume that the bedsteads which were bought at 4s. 7d. were subjected to a certain amount of inspection?—They would be of a totally different nature, and they might have met the immediate requirements; you cannot compare a bedstead bought at 4s. 7d. with a bedstead bought at 7s. 5d.

2828. (*Mr. Gibb.*) Unless you see them?—Unless you see them; that is so; there is no comparison to be made at all.

2829. (*Chairman.*) Would you look at Question 684, with regard to mule harness. It is alleged that there was a pressing necessity for converting mule harness into six-span sets for use in South Africa; that some of these sets of harness were so converted, and that then the Director of Contracts protested against the previous purchase of material to convert the first 200 sets, and in consequence of that protest the Director-General of Ordnance, who was then acting, decided that it was necessary to comply with the usual routine, and the allegation is that in consequence of that there was considerable delay; that everybody being aware, or being presumed to be aware, at that time that there was great pressure to get mule harness out to South Africa, it scarcely appears reasonable, unless there is some other explanation forthcoming, that a departure from the usual procedure should not have been authorised as a matter of urgency?—I notice that Sir George Clarke in his following question brings out the point that disaster might have occurred from the action which is described, which you have just stated in your question. In the first place I should like to say that the "Deputy" General of Ordnance must be a mistake for the "Director"-General of Ordnance; it was the Director-General of Ordnance who really dealt with this question.

2830. You are quite sure that it was the Director-General of Ordnance, and not somebody acting for him?—Quite so. It was the Director-General of Ordnance, Sir Henry Brackenbury.

2831. Would that appear on the paper?—Yes. Now what I say upon that point is this: that for whatever risk there was of incurring the grave disaster pointed to in this evidence, the Director-General of Ordnance was solely and only personally responsible. I never objected to these things being made at the factory; on the contrary, I said that I should be very glad if they could be made there.

2832. You never objected?—I wrote on the paper here on the 12th of October this Minute, which I will read to the Committee—

2833. Will you just look again carefully at Question 684 before you proceed with your answer?—Certainly.

2834. (*Sir Charles Welby.*) Is this the original case in which they were ordered to convert some 200 sets into six-span sets, and did it locally?—What I mean to say is this, that what was done at a time antecedent to the pressure of the war, even if it was done, which I have not verified, had nothing to do with the position that occurred on the 12th October.

2835. (*Chairman.*) But when you speak of a time antecedent to the war, surely this was dealing with mule harness that was ordered there in a hurry for the purposes of the war?—"We had a certain amount of mule harness, about 1,200 sets of general mule harness, in store. I was ordered to convert some 200 sets into six-span sets, that is, suitable for six mules. We did this locally, making a purchase of material and fittings to carry this out. It was done in about three weeks." I do not take it that it was alleged that I did object there.

2836. (*Sir Charles Welby.*) Will you read on?—"Shortly afterwards, at the end of September, orders were given to convert a further 150 sets, which were required for the smaller ammunition carts and water carts of regiments proceeding to the Cape. The orders were to have this done as urgently as possible, as the regiments were to go out with their equipment. The Director of Contracts had protested against our previous purchase of material to convert the first 200 sets."

(*Chairman.*) That is the point.

2837. (*Sir Charles Welby.*) Do these papers which you are going to produce refer to the original 200 sets or to the second 150 sets?—They refer to the second 150 sets. That is the point. The point is this: If I raised any objection to the thing it was on the ground of his buying material which probably I should have said he ought to have come to me for.

2838. (*Chairman.*) Did you raise any objection?—That I will look up if you think it is material.

2839. Yes, if you please, I think it is very material?—But the material point comes with regard to the 150 sets, and I say with regard to them that I did not raise any objection in any shape or form, but that, on the contrary, I asked the Principal Ordnance Officer, and I asked the Director-General of Ordnance to let the Principal Ordnance Officer do all he possibly could in the matter.

2840. (*Mr. Gibb.*) What is the date of your minute?—The 12th of October.

2841. But that is too late, you know; the date given to us is that the demand was on the 15th of September and the contract was placed on the 9th and 10th of October; so that any minute of yours consenting to local purchase, to be of any use, must have been about the 15th of September. The thing was done on the 10th of October?—The date of the 15th September is wrong, you see he says, "Shortly afterwards, at the end of September, orders were given to convert a further 150 sets." Then he says further on he sent it up on the 15th of September. As a matter of fact the demand did not come up till the 25th of September, at any rate the consideration of the demand was not settled and was under discussion at that very moment, and as I said before, on that date, here is this "Demand P 3" in this particular paper.

2842. (*Sir Charles Welby.*) Is the Principal Ordnance Officer wrong in saying that the contracts were placed on the 9th and 10th of October?—Yes, I should say so.

2843. (*Mr. Gibb.*) Have you got the demand here?—Yes, I have. Very likely the orders for these parts of this store were put out on the date that he mentioned.

2844. Can you not give us the date?—I cannot. I see we telegraphed to the Principal Ordnance Officer "re Demand 1025" which is the paper I have got. "We have only ordered 332 cruppers. Do you want them or would you prefer us to cancel, if possible?" and then he says they have no preference; he does not object to take the extra quantity of cruppers.

2845. Perhaps, as your papers here are imperfect, you would like to send in a written memorandum on the subject giving us the exact dates and stating what happened?—The demand also included reached us on the 29th of September, that is the date on which the demand reached us; he says, I think here, the 15th, but it reached us on the 29th.

2846. (*Sir Charles Welby.*) He says he sent it up on the 15th?—Yes.

Mr.
A. Major.
23 Jan. 1901.

Mr.
A. Major.

23 Jan. 1901.

(The Secretary.) It might take two or three days before it reached you here.

2847. (Mr. Mather.) But he says in this paragraph, "Shortly afterwards at the end of September orders were given to convert a further 150 sets" P.—Yes; so that by the 3rd of October tenders had been invited for all the items except these swingle trees, and then I, having at that time placed the order, sent this minute "D.G.O. to see. Concur in C.I.G.S. making the 500 head collars not ordered. No objection also to his converting an additional quantity if you consider it desirable. I do not understand P.O.O. to mean that C.I.G.S. can assist as regards the other items, but if it is so we have no objection to additional orders being given to him. We should like to know soon what has been done."

2848. (Chairman.) I think, perhaps, you had better send us a complete statement afterwards of the facts with regard to this transaction?—If you please.

2849. And the form in which to have that statement should make it clear whether you did protest in any way against the action of the department on hearing of the proceedings that they had taken in the first instance to convert harness?—I will see exactly what action was taken, whether we took that action on the first 200 sets, and exactly what action was taken on the second 150 sets. (See Appendix V. (C) (2).)

2850. Will you kindly now look at Question 686; there is a question there as regards horsehair for beds of general hospitals. It is stated by Colonel Stevens that he purchased horsehair ready teased, ready for use for filling the beds at 1s. 2d. and 1s. 3½d. a pound, and that shortly afterwards the Director of Contracts placed contracts at 1s. 2½d. to 1s. 7½d. curled?—This is a case on which the Principal Ordnance Officer certainly committed a most insubordinate action in spending over 2,000*l.* in horsehair when the Secretary of State had limited his purchasing power to 25*l.*

2851. For one purchase?—For one purchase.

2852. Does that mean one purchase in the course of the year?—No, any number—hundreds of purchases of 25*l.*

2853. But none of them to exceed 25*l.*?—None of them to exceed 25*l.* in value without its coming up.

2854. Therefore, if in theory he bought his horsehair in lots of 25*l.* each, would he have been acting within his authority?—We should consider it an evasion of the rule if we found that he was ordering the same thing.

2855. Splitting up the order, as it were, into a lot of small fractions?—Certainly; but in this case I do not know that he did that—at any rate he ordered horsehair and bought horsehair to the value of 2,000*l.* without notifying it to the purchasing branch at all; it was merely discovered when the bill came in for payment. Now the price at which we had been buying horsehair up to that time was about 11d. a pound; we had certainly paid as much as 1s. 1d.; he bought it at 1s. 2d. and 1s. 3d. I do not find fault with the price which he paid.

2856. Was it the same horsehair, was it teased horsehair?—Yes, that is correct, it was teased, and we bought curled; but the fact that I had to buy horsehair six or seven weeks later, which was the fact, at 1s. 2½d. and 1s. 7½d., merely indicates that the market had gone up against us; that every bit of horsehair had been purchased already; taking those 2,000*l.* worth of horsehair off the market materially advanced the price. That is all that that shows; it does not follow that if he himself had bought it a month and a half later he would have been able to buy it for 1s. 2d.

2857. (Sir Charles Welby.) I suppose you would admit that in a case of sufficient urgency the Principal Ordnance Officer was not only justified but bound to take immediate steps, and to discard routine for the moment?—Not without asking me—not to the extent of 2,000*l.* My contention is that if he got that horsehair quickly I could have got it quicker, and you cannot prove that I could not. You cannot show any single case in which I could not have bought quicker.

2858. You deny that at any time advantage was gained to the Service by his action?—Considering the way in which he buys I do; considering the way in which he went about the country buying corn crushers, I should say that considerable time was lost.

2859. But supposing that time could be saved by such a process, do you maintain that as an invariable principle?—The invariable principle is that the Secretary of State himself is the purchaser as the head of the firm; he is practically the purchaser through me; and I say that when a man who is limited by the Secretary of State to 25*l.* goes and makes a purchase up to 2,000*l.*, when he is within 10 minutes of me, the right authority, by telegram, it is his duty to communicate with me, and say "Shall I buy, or will you?" and I then shall judge whether I can buy quicker than he can, and if I do not think I can, in dozens of cases, I say "No, you buy." But in regard to this horsehair my contention would be that I should buy quicker than he would, and it is proved over and over again. That is the only point; practically I say I do not think there is anything in it, as I said before the market was cleared and I had to buy at a higher price. It comes to that, and nothing more.

2860. (Chairman.) What object would an officer in the position of Colonel Stevens have in not complying with the regulations but effecting this purchase on his own responsibility, unless he was persuaded that the circumstances were very urgent, and that it was the only way in which he could get the necessary articles in time?—He had no right to be the judge of that. That is my point. I am to be the judge.

2861. (Sir Charles Welby.) To be the judge of the urgency of the service?—I admit the urgency of the service. Every service was urgent at that time. If he telegraphed up and said, "I want horsehair in a great hurry," or if he sent anybody up from Woolwich to tell me so, and said, "I think I can get it and know where to get it," we should say, "Certainly, buy it."

2862. (Chairman.) But you contend that in no case should he himself be the judge of that urgency and act, as it were, off his own bat, without consulting you?—No, not when he is within 10 minutes of the proper and delegated authority.

2863. (Sir Charles Welby.) Then you have a further charge against him in that case?—P.—I make no charge against him. I have no doubt that he acted according to his knowledge on the subject and according to his conscience. He thought he was doing right, perhaps; but still the tendency has exhibited itself of doing this kind of thing on many occasions.

2864. But, as I understood, there was a further breach of procedure on his part in that, having purchased this horsehair contrary to the usual system, he did not report his action to you afterwards?—That is so.

2865. That was a separate matter?—He absolutely failed to report it altogether.

2866. (Mr. Mather.) And you did not know that this contract was given until the accounts came in?—I absolutely had no knowledge of it till then.

2867. (Chairman.) You mentioned the case of the corn crushers; let us come back to that—it is at Question 593—you mentioned it incidentally just now. The Principal Ordnance Officer states, as an illustration of the necessity of acting on his own responsibility in cases of urgency, that he was obliged on one occasion to send out and buy corn crushers on a Saturday at a moment's notice, in order to get them on to the transports that were sailing on the Monday and on the Tuesday. What he says is this: "I sent out and bought them. In no other way could those corn crushers have been put on board. But it is thrown back upon one, and queries are raised on one's action, which was really taken for the good of the service, and in the only possible way that the good of the service could have been met." Would you contend that in that case, admitting that it was absolutely urgent to get the corn crushers on the Saturday in order to get them placed on the ships on the Monday and on the Tuesday, he ought to have referred first for authority?—In a case like that I should certainly say that it was not necessary, nor did we ever say it was necessary; we allowed the proceedings as a matter of course, and said that we thought the Principal Ordnance Officer had done the best he could. But I suppose the Committee would rather infer from this, "I sent out and bought them," that those corn crushers were put on board on the Monday and the Tuesday.

2868. We certainly did infer that?—Nothing of the sort.

2869. When were they put on board?—On the Thursday. My objection is this, that he had a man coming up here on Saturday and going down to Liverpool and staying there four days, Sunday, Monday, Tuesday, Wednesday and Thursday morning, buying six corn crushers.

2870. Wait a moment, Colonel Steevens states this: "I saw a paper in which the case of a purchase of six corn crushers was held up to show that I had bought them at Woolwich, when there was no necessity for me to go into the contract business." Are we to understand that these corn crushers were not bought at Woolwich after all, but that he sent round the country for them?—That is so.

2871. If the Principal Ordnance Officer had to send round the country for them and could not secure them at Woolwich, then, I think, it is an argument that he might just as well have sent through somebody else as have sent his own man round?—He did not buy them at Woolwich; he came up to London and he did not buy them in London; he went down to Liverpool.

2872. Did he send a man up to London?—Yes.

2873. He could have sent a telegram to you in the same time. I suppose?—In much less time. What I want to point out with regard to that matter, is, that I did not object in any way to the action that had been taken in regard to this sort of thing. I think it was expensive, and I think it was a loss of time. I am certain that, if he had asked us to buy corn crushers, we could have done it in half the time without getting off our stools as Sir Henry Brackenbury says. It is only an instance of what occurred a little later; they sent us up a demand for 200 corn crushers. I got that demand on the 11th. I had the whole of the corn crushers offered, in fact, we had 700 offered, and I should have bought them on the 12th, on the day after the demand came in; but, inasmuch as there were different patterns in them, I thought it was expedient to send down to Woolwich to ask: "Are these corn crushers what you want; will you take them; do you like them?" They said, "Yes." On the 13th, I bought the 200 corn crushers, that is to say two days afterwards, with the interval of going down to Woolwich, 185 of those 200 corn crushers were ready for delivery at once, and my contention is this: that if he had asked me to buy them, I could not only have put six corn crushers on board those ships on the Monday and the Tuesday, which was not done, but I could have put 50 corn crushers on board them, if necessary.

2874. You are quite sure that the six original corn crushers were not put on the ships on the Monday and the Tuesday?—No, they were not.

2875. Because the statement is "in no other way" could those corn crushers have been put on board"?—Quite so. It is a misleading statement absolutely.

2876. You could prove, could you, beyond all doubt, that these corn crushers were put on board ships that did not sail on the Monday or the Tuesday, but later on?—The real fact is, that those ships did not sail on the Monday and the Tuesday.

2877. Yes, but were the corn crushers put on the ships on the Monday and the Tuesday?—No, they were not put on board on the Tuesday.

2878. (*Mr. Gibb.*) Was it that they were not put on board because the ships did not want to sail, and, therefore, they did not put them on the ships hurriedly?—That I do not know.

2879. (*Chairman.*) Could they have been put on board the ships on the Monday and the Tuesday?—Late on the Tuesday I had a telegram from Liverpool, because I asked whether the corn crushers had been put on board, and the reply was that they had not been bought, and I found out, as a matter of fact, that the corn crushers were not put on board the ships till Thursday.

2880. When were they bought; would they have been ready to put on the ships on the Monday and the Tuesday?—Certainly not on the Monday, because they had not been bought late in the day on Tuesday.

2881. You are positive of that?—Yes.

2882. Where were they bought?—They bought three here and there; they went to Manchester to buy some. It was a big business buying these six corn crushers.

2883. Do you know where the others were bought?—At Birkenhead, I think. I have shown you the way we

buy things. We sit upon our stools and buy, but we could not conduct our business on the principle of going round the country and sending people to buy half-a-dozen corn crushers, and taking four or five days to do it.

2884. (*Mr. Gibb.*) The point of your observations is, that through the organisation of your department, you can, in most cases, buy more rapidly than any department, without your organisation, could do?—Certainly.

2885. (*Chairman.*) Will you turn to Question 696. This is a question of slings for stretchers. The allegation is that a demand was made for slings of webbing for stretchers, and that two months after the demand was sent up the contract was progressing so slowly that there was only a prospective delivery of 100 a week three months afterward, and that in consequence the stretchers had to go out to South Africa without the slings, whereas, if the requisitioning department had itself been dealing with the matter, realising thoroughly the urgency of the slings, it would at once have found out that the slings could not have been got of that particular material, and would have got them made of some other material, which would have served all practical purposes?—The demand for these slings reached me on the 27th January. We called for tenders on the 2nd of February. There was only one person who tendered for these slings. We could not get them really, but we were trying to persuade a man, who was very apathetic on the subject, to tender, and after a time we got him to promise to make delivery. Tenders were called for, and came in; but this man was very slow in answering inquiries; he took a week sometimes to answer a letter, he was so apathetic. I informed the Director-General of Ordnance, on the 8th of March, which was not two months, that we could not get web slings, and I suggested that we should get leather ones. As soon as we got the tenders for the leather ones I bought not only the 1,000 that he asked for, but, with the consent of the Director-General of Ordnance, knowing that these things would be required in large quantities, I bought 2,800, and for 1,000 of those—for which he says my price was 7s. 5d.—and he could buy them for 3s. 1d., I paid 3s. 3d. I could have got more at that price, but as time was such an object I went to a higher price. I bought 400 at 4s. 6d., 800 at 5s. 6d., and 600 at 7s. 5d. So you see there is a great deal of difference. It is rather a misleading statement to say that I bought them at 7s. 5d. when I bought 2,800 at different prices. Though I paid 7s. 5d. for 600 on the question of time only, I bought the majority at 3s. 3d. The question of those web slings was simply this, that he was asking for a thing that could not be produced. There was no one to tender for them. We did the best we could. There was a great deal of difficulty in getting the only tenderer, the only man who would undertake to do them at all, to communicate with us.

2886. (*Mr. Gibb.*) But I think the point of the complaint is simply this, that until the 8th of March you did not inform the Director-General of Ordnance that there was any difficulty in obtaining the article?—That is so. We did not in that case, we were trying to get them.

2887. How do you explain the delay in communicating that fact to him?—Simply because we were trying to get them all the time, and until we proved that we could not get them it would have been rather difficult to convince the Director-General of Ordnance that we could not.

2888. But you did not try to convince him?—Not until the 8th of March.

2889. (*Chairman.*) You spent about six weeks trying to get them?—It was 39 days, and it was going on day after day; there was no delay in the office; we were taking steps every day trying to get them, but the difficulty was in getting the only man who could do the thing to say whether he would do it or not. The papers are here, and they show that there was no delay in the Contract Branch; the delay was really in negotiating and persuading this man to supply them. We do not care to go to the Director-General of Ordnance and say, "we cannot get them" if it is possible. We want him to see the papers and convince himself that we have done everything that is possible.

2890. Do not you think that while it was going on all that time, the question of stretchers being a very urgent and important one, you might have informed the Director-General of Ordnance of the fact before the 8th March?—We do not suppose that they have not got

Mr.
A. Major.
23 Jan. 1901.

Mr.
A. Major.
23 Jan. 1901.

any slings at the time. The demand came in for things which it would take some time to manufacture under any circumstances. When I say that the tenders were called for on the 2nd of February we did not get those tenders in until four or five days afterwards.

2891. You mean that you thought it was not necessary to inform him until the end of six weeks, basing yourself on the supposition that he had some stretchers?—Yes, that he would have had some, and that he was not relying on getting these in two or three days.

2892. Was not that supposition just a little dangerous?—It is perfectly well known that 3,000 slings of a new pattern cannot possibly be got under some considerable time.

2893. (*Mr. Gibb.*) And I suppose you would assume that if urgency was of the extremest importance, the demand would not be for a new pattern but for the old pattern?—Certainly, we should rather suppose, knowing that they were going in for a new article, that a reasonable time was given for obtaining the article.

2894. (*Chairman.*) It was a new article?—Yes, it was a new article.

2895. When the demand came forward, did it bear anything upon it to indicate urgency?—I think every demand that came forward at that time was urgent. We dealt with all the demands as urgent practically, although, in many cases of these demands we were much hampered by the question of printing. We piled up the printers, getting lithographs and things of that sort. In some of these cases I wanted 500 or 600 lithograph forms for sending out tenders, and the printers sometimes had not got the stones and could not do the work for us.

2896. There may have been many additional reasons, such as press of work, and all that sort of thing, which daily occurs, but the point I want to get from you is whether you do or do not consider that such a delay is really reasonable and defensible?—I think that in a case like that we absolutely did all that we possibly could to get them, and that we did not like reporting to the Director-General of Ordnance that we could not get them until it absolutely appeared on the paper that it was impossible; then I asked him in a moment, "Could you not do with leather slings?" because I did not suppose for a moment that they had no slings, especially when they were asking for a new pattern, as you point out.

2897. Then, in your opinion, the delay was defensible?—I think so.

2898. (*Mr. Mather.*) As a matter of business and as a matter of regular routine in your department, is it not your interest to communicate with the Director-General of Ordnance or his deputy in relation to all orders of this kind, orders of emergency, in this sense: "I shall find great difficulty in obtaining the articles you require; what can you do to help yourselves? can you not yourselves make some efforts down at Woolwich to supply a certain number to meet the immediate emergency? I will do my best"?—I quite see your point.

2899. It seems as if you were working with equal devotion to the service, but that you were working on parallel lines?—I am glad to say we were working with equal devotion.

2900. But parallel lines never come to a point?—Yes.

2901. Your two departments have one object only in view, and yet you keep yourselves entirely apart?—No, you must not say that; we are continually conferring upon every subject with the Director-General of Ordnance.

2902. But the cases which have been brought before you by the Chairman seem to indicate that a word or two, even a telephone message, would have relieved Woolwich and enabled them to do something for themselves?—Are you confining your statement to this particular case?

2903. These are merely typical cases; there is no grievance upon these particular cases, but they indicate that the system does not work harmoniously?—I do not think you must assume that. You must not assume that we do not work in what I call very close touch, my staff and the Director-General of Ordnance's Staff; I personally go in continually to the Director-General of Ordnance and consult him upon various points; but this was a case in which we were trying

to get what we were asked for, and if I had gone to the Director-General of Ordnance and told him we could not, he would have said to me directly, "You have not tried; you must try"; I did try, and the moment I found I could not get it, and could show upon paper that it was not possible to get it, I sent the paper in to him and told him, and asked him, if he would not like to have something else.

2904. But that took six weeks?—I admit that it took a long time.

2905. And you admit that you knew in two or three days that you would have great difficulty?—No. Of course we had to put out tenders on the 2nd of February, but there would be three or four days occupied in getting in those tenders, so you must take it probably as about the 7th or 8th of February before we got even one man to negotiate, and then when we corresponded we got no answers. One man said he would do some, but all he offered to do was a small quantity.

2906. (*Colonel Miles.*) In a case like this of war, must the articles be bought by tender; is there no other method of buying them?—It is the best way of getting supplies, to find out who will be willing to supply them.

2907. Does it not seem a slow means; could it not be done in any quicker way?—No, it could not be done in any other way so expeditiously. You find out what the people are prepared to do.

2908. (*Mr. Mather.*) In my own business I find a state of things by no means comparable; on the contrary, in emergency, tenders have to be lost sight of altogether; you have to find out by diligent inquiry where you will be able to get a thing at once, and to order it at once?—So should we do if we knew who could supply.

2909. (*Mr. Gibb.*) You mean in cases where you do not know a firm from whom you can purchase?—Yes, but that firm would be included in the competition, and by competition we have not only found out that firm but half a dozen others; and also an advantage of getting competition and finding out firms is that you are able to spread an order so as to get it executed in the time you want it. You cannot go about the country when you have an enormous number of orders, as we have, to find out. In a small way of business, where you know people, you can go to the best people and find out whether they can supply, and buy, but you cannot do it in our case.

2910. (*Sir Charles Welby.*) But at the beginning of this case you were aware that the Director-General of Ordnance was asking for an article which it was difficult to obtain?—I could not tell that until I had found out whether people would or would not undertake to supply.

2911. But the moment you could only find one contractor, and that an apathetic contractor, you were aware that there was difficulty in providing this particular article?—Certainly.

2912. Would it not have been wise at that stage to have warned the Director-General of Ordnance of the probable result of insisting on this particular variety?—He would not have done anything until I had proved to him that I could not get it.

2913. (*Mr. Gibb.*) Does it not come to this, that then it did not occur to you that it would be wise, but now, after the event, you probably see that it would have been wise?—I go with you to that extent, in that particular case; but you see, when you have hundreds of orders before you, it is very difficult to know and to see everything; that is why you want a very intelligent man. These things have to be done by the gentlemen in the office, and at that time my position was that I only had three men of experience in the whole branch when this business was being conducted. These things have to be entrusted, to a great extent, to gentlemen without experience, and those points do not strike them always, and it is impossible for me, as Director of Contracts, or for my assistant, as Assistant Director of Contracts, to have before us all the points that come up in the different stages of the transaction.

2914. And you were all very much pressed at that time?—Working 12 and 14 hours a day, all my staff, and they were wearied to a degree. But you must remember that this is one case out of 20,000. About that time I put out 20,000 orders, and 19,900 of those orders were executed satisfactorily, and brought in

the stores that we wanted. This is a small triviality compared with the enormous number of cases in which things were delivered, and delivered practically to time. I do not say that a contractor ever comes up exactly to time; it is not to be done; but they do come up approximately to time. At any rate a very large quantity of orders are delivered in time as a rule. The way in which contractors have responded to the demands of this office to produce supplies during this war has been something wonderful, and although some people say that we do not do it by fines and penalising them, we do it in another way, and, I think, a much more pleasant way. Whenever I find a contractor a little behindhand in time and things are wanted, I send to him and say, "This is a matter of national importance that you should make these supplies, the Secretary of State expects you to put every order you have got on one side to do the Government orders on occasions like this," and people have said to me, "Well, Mr. Major, if you put it in that way we will do it," and they have done it. That, I maintain, is a far better way, appealing to the good feeling of a contractor, than to say, "Look here, if you do not do this I shall impose a penalty of 20 per cent." We have been friendly with contractors, and I hope always to be friendly with the gentlemen who serve the department.

2915. Would you look at Colonel Mulcahy's evidence at Question 831?—I should like, if you will permit me, to say something more upon the question of mule harness.

2916. I thought we had done with the question of mule harness?—At No. 717 there are a lot of supplementary questions.

2917. (*Mr. Gibb.*) But I understand that you are going to give us a written statement about that case?—But there is something said here to the effect that we have only a paper idea, and that it would be nothing more to us. I think you will find it at Question 751. (*Sir George Clarke.*) Might we not take the case as "to the mule harness as a case in point; your department would contain people who would know exactly what was meant, while, on the other hand, in the Contract Department, it would be nothing more to them than a mere expression on paper?" The reply to that by Colonel Stevens is: "Yes, that is so." I join issue with him entirely upon a point of that kind. What took place with regard to this mule harness, and the getting of this mule harness, was this: The military authorities were most anxious to obtain this mule harness from America, but when I heard the price at which that mule harness was going to be supplied, I said, "Only very inferior stuff can be supplied at that price," and I recommended strongly that instead of getting supplies of an inferior character from America, inasmuch as we had on the programme about two months in which to supply the mule harness, we should get it in this country to our own specifications and patterns. It would be far superior to anything that they could buy in America.

2918. (*Chairman.*) How do you know that it would be far superior to anything that they could buy in America, where they use mules very largely, and mule harness is put to very hard work?—From the price.

2919. Is that a necessary conclusion?—Undoubtedly. The moment our patterns went out to America, which they did after a time, they said at once that they could not make stuff like that.

2920. But they use mules and mule harness?—I do not know.

2921. But they use mules and mule harness to a great extent in America, and for very rough work; that is a country where mule harness is much used, and this is not?—All I can say on that point is this: I recommended that the mule harness should be bought in this country, and I further recommended that in order to get it in time the traces should be stitched by machine instead of by hand, as it was absolutely necessary to get it in time, that recommendation was adopted, and the consequence is, that between the time at which the order was put out and the time at which it was stated to be required, a very large quantity of mule harness was sent out from this country. In cases in which mule harness was required locally, instructions were given to the Cape to buy. They said there was plenty there which they could buy. We knew there was plenty of inferior stuff which had been sent out from Walsall, and plenty of inferior stuff which had been sent

out from America. The result of it has been that the stuff bought out at the Cape locally was rubbish, but the stuff that we sent out, which was got from this country upon my recommendation, was of first-class character, splendid stuff; that is to say, that the mule harness (which is one of the most important things you can have in the field) sent out from here was of first-class character, while the stuff bought locally and sent there from America and Walsall was inferior, the harness sent out from here, although, perhaps, it cost 30 per cent. more than that sent out from America, would probably last five times as long as the stuff bought locally. Then people say, as Colonel Stevens puts down here, that mule harness is a mere expression on paper to the Director of Contracts. I think I have said enough to show you that it is not a mere expression on paper. In other places, again, it is stated that we do not take any interest in the matter. Well, it would have saved me an enormous amount of work if we had not had it to do. I watched the progress of this mule harness every day to see it come up to time. I had reports every day from the makers to see what deliveries were being made. I checked the deliveries personally myself; I reported them to the Secretary of State; there were questions being raised as to delays in the mule harness, and the Secretary of State said he had seen the Director of Contracts, and the explanation was quite satisfactory.

2922. But I should like to get this point quite clear from you, as it really covers the question whether the department is a paper department as has been said, or not; the requisitioning department, who have technical knowledge, recommended that mule harness should be got from America, probably knowing and presumably knowing, all that is required of mule harness; you decided, against that recommendation founded upon their technical knowledge, that mule harness from America must be inferior, and was not adequate; not from having any experience, I suppose, of the use of mule harness, but because it was lower in price?—I went upon the question of price; I did not decide, I only recommended, and with the concurrence of the Director-General of Ordnance it was bought here at home.

2923. (*Mr. Gibb.*) Oh, he acquiesced?—Certainly. Of course, I never do anything of that kind without his acquiescing.

2924. (*Chairman.*) Then he did not support the recommendation of the Requisitioning Department under him?—There was no requisition for it; there never was any requisition. An Army Service Corps officer, who is no expert judge of harness, had gone round America for about six weeks before this war broke out trying to find a pattern of a buck wagon, of which we have had to buy a large number, and a pattern for harness, and he reported that he could get any quantity at 25*l.* a set. I know that we cannot get harness of the character we require under 40*l.* a set, and I know that harness offered to him at 25*l.* a set in America could not approach what we should get here for 40*l.*, because the price of mule harness all over the world is practically the same.

2925. However, there was no controversy between you and the department requiring the harness, because the Director-General of Ordnance agreed with you?—None whatever. I should say that in that case the department to whom the Director-General of Ordnance delegated his power with regard to this particular thing was the Quartermaster-General. Therefore, with regard to purchasing buck wagons and mule harness for this war I was practically in communication with the Quartermaster-General and not the Director-General of Ordnance.

2926. Did the Quartermaster-General agree with you?—Certainly.

2927. (*Sir Charles Welby.*) You said that there was some harness used in South Africa which was obtained from America?—Yes.

2928. Not sent out by you, but used in South Africa?—Yes; we believe that the American market supplied South Africa with mule harness.

2929. (*Chairman.*) That is only belief?—Yes, it is only belief; I have not verified it; we conclude that it was so.

2930. But you have no positive knowledge?—No.

2931. (*Sir Charles Welby.*) When you said you were quite sure that that American harness at 25*l.* a set was bound to be inferior stuff, what you meant was that you were sure it would not pass the inspection of the

Mr.
A. Major.
28 Jan. 1901.

Mr.
A. Major.
23 Jan. 1901.

Inspection Department here at home?—It is absolutely different altogether, and the moment that our pattern was sent out to America it was proved, because our mule harness pattern was sent out to America, and they said they could not make it.

2932. But all you had to do was to satisfy the Inspection Department?—Yes.

2933. (*Chairman.*) Is there any other point that you wish to refer to?—There is a reference at Question 688 to a question of enamel ware. I cannot accept Colonel Stevens' statement, that at the interview with the Secretary of State, I suggested that enamel ware was made of tin. We were discussing both tin ware and enamel ware at the same time, and my allusion to the fact that we could not get something on account of the state of the tin market did not apply to enamel ware but to tin ware. Then there is one other point, if I may refer to it on this, and that is as to Question 742. There is something there which I think would slightly mislead people.

2934. It is the case of felling-axes and hand-axes?—Yes. The answer is, "I asked that 2,000 might be bought at once. The Director of Contracts sent a gentleman into the country to buy them, but it appears he did not know what he was going to buy, because he wrote and said that it would be well if we would give the trade description of this article when we were going out to purchase." The gentleman the Director of Contracts sent to buy knew, of course, that he was going to buy axes, and that he was going to buy sledge hammers; and he was accompanied by, and asked to be accompanied by, an expert from the Director-General of Ordnance's Branch.

2935. That is to say, you sent two men to buy?—I asked for one, but I got three, so that, absolutely, four men went to buy.

2936. They went to Sheffield, did they?—They went to Sheffield and various places. Three experts went—one inspector and two viewers—besides the gentleman from my department. There was not the slightest hitch in buying the axes as far as they could get them; they did not get all they wanted to buy, and the point referred to by the Principal Ordnance Officer did not arise until after the purchases were effected. It was on account of the Principal Ordnance Officer giving the mere vocabulary definition of the axe that the contractors did not know the sort wanted. Therefore, all we said was, "If you can give the trade definition as well as the vocabulary definition, it would help us." Previously to these gentlemen going to buy, we had written to all the contractors, telling them we were coming in search of axes and hammers, but these people on the vocabulary definition given by the Principal Ordnance Officer, produced different axes to what were wanted; they produced carpenter's axes instead of the small wedge axes. There was no misapprehension on the part of the gentleman who went to buy; he had three inspectors with him, and he merely wrote to point out that it would be better to be as complete in the description as possible.

2937. As a matter of fact, these four gentlemen went from London to Sheffield to buy these 2,000 axes?—Yes.

2938. (*Mr. Mather.*) And none of them knew the axe they wanted?—That is not so.

2939. Is not that the effect of your explanation?—I do not think it is quite that. They did know the axe we wanted; it was the contractors who did not know on the definition given to them.

2940. But the inspectors explained to them when they came to consultation?—Quite so. With regard to the sledge-hammers the thing was of a different nature. When these experts went down we wanted to buy these 12-lb. or 14-lb. sledge-hammers; they said they did not know what the Principal Ordnance Officer meant, so the consequence was they telegraphed up to the Director of Contracts. I went to the Principal Store Officer, a technical man, and asked if he could tell us, but he said he did not know anything about it. I then went to the Deputy Director-General of Ordnance and asked him. He said he did not know—no one knew, and in the end we went to the Principal Ordnance Officer, and ultimately found out from the Principal Ordnance Officer exactly what was wanted. None of the experts who went out to buy knew what was wanted. The gentleman who went as my representative did not profess to know; there was no one here who knew, and

we had absolutely to go back to the Principal Ordnance Officer to find out.

2941. (*Sir Charles Welby.*) Whose duty was it to instruct these gentlemen?—The Principal Ordnance Officer.

2942. (*Mr. Mather.*) Sometimes do you find the Principal Ordnance Officer rather careless?—I will not say that. I do not make charges against people as it seems to be the pleasure of other people to make them against me. I shall have something more to say on that point presently.

2943. (*Chairman.*) Will you look at Colonel Mulcahy's evidence, Question 831. Colonel Mulcahy thinks it would be in the public interest if, after the tenders had been received and schedules made of those tenders, he should be consulted as to the distribution of the orders. Do you not think his assistance might be useful in such cases?—In a large number of cases of important orders, where we think we have not sufficient information, we do refer to the Director-General, and, of course, if he wishes to have these things referred, it is done, but during the time of the war, the pressure has been so great that we may have thought it unnecessary to refer so much, as we otherwise should do, but if the Director-General wanted these things referred, it would be done.

2944. He says the Director of Contracts objects?—The objection I have taken is, that unless it is absolutely necessary, it is a pity to do it.

2945. Would you deprecate it?—I do not object at all, in ordinary cases, referring every contract if the Director-General of Ordnance wishes, before it is placed, but, of course, it means an enormous duplication of work.

2946. (*Mr. Gibb.*) Your practice in dealing with the Clothing Department seems to differ from your practice in dealing with the Works Department on this point, because at Question 960, Colonel Watson in answer to the question, "Then is it the Director of Contracts who, himself, decides which tender is to be accepted," replies, "No, he refers it to us." Then Question 961. "He refers it to you in every case. (A.) He refers it to us in every case." So that, apparently, your practice differs?—That is so. The contracts are very few, but they are of great importance, involving many thousands of pounds, and being of a completely different nature, it is the practice to refer every building contract to the Inspector-General of Fortifications.

2947. (*Chairman.*) Have you the evidence up to Question 1712?—Yes.

2948. There is a question about an order for steel balls having been sent to a certain firm?—Yes, I have not gone into that question at present. I have not had time to go into it yet. (*See Appendix V (C) (3).*)

2949. Nor, perhaps, into the question arising at Question 1724 about a fourth trial which was given to a contractor?—Yes, I have a paper on that question to hand in to the Committee. It is a very elaborate one; it is only just finished, and before I hand it to the Committee I want to read it, so that I am not prepared yet to answer any question upon that. When I have had an opportunity of going into it the Committee shall have it. (*See Appendix V (C) (4).*)

2950. On Question 1769, as to the price of copper, what do you say?—On that point I have a statement.

2951. I understood you explained that the difference of 3*l.* or 4*l.* was rather a picturesque way on the part of Mr. Powell Williams of putting it?—I do not want to withdraw my evidence as regards the fact that he put it in that way.

2952. But you would consider it rather as a general remark, and that there was no such actual difference as 3*l.* or 4*l.*?—No, never; but I have drawn out a statement showing the cost at which we placed copper before the brokers were abolished and afterwards, and it does show that the prices at which we have bought were more advantageous than they were under the broker's system.

2953. (*Mr. Mather.*) Speaking generally?—Speaking generally; on the orders for that six months, in every case we bought at a price varying from 2*l.* to something less (I think 1*l.* 3*d.*) below the quoted prices, and in the other cases, before the brokers were abolished, nearly 2*l.* above, but in some cases, even with the brokers, we bought below the market price. I should like the Committee on that question to know how the

Mr.
A. Major.

23 Jan. 1901.

matter as to employing brokers stood. Of course, the brokers for copper, and the brokers also for other metals, received their appointments from the Secretary of State. We did find out, and we were satisfied that we could buy metals cheaper by not going through the channel of brokers, and they were informed that we should at some time or other go into the question and probably dispense with their services. The system of buying through brokers had been, of course, accepted and recognised as a proper system of purchasing by committees which have gone into this business. It was not considered necessary to do anything in a violent hurry, and with regard to one member of the firm who protested very much against any change being made, or any intrusion on his appointment as a broker by the Secretary of State; an intimation was made to him that we should not commence to make any change (as he was somewhere about 80 years of age), probably as long as he, the senior member, lived; and he lived, I think, until nearly 90. Immediately his death took place we did make the change, and we also, under very strong protest, abolished the brokers. We had to take legal opinion as to dispensing with the brokers; they made a large claim for compensation, but in the end it was settled that we had power to dispense with their services, and we did, and, I think, with great advantage to the public service in the way of economy.

2954. (*Mr. Gibb.*) You said that when there was a difference between you and a department as to the acceptance of a tender that difference would always go to the Financial Secretary for decision?—Yes.

2955. What would be the procedure in the placing of it before the Financial Secretary; would you see him personally about the matter?—I should put it to him on the paper.

2956. Would the differing department send up a minute?—Their minutes would be on the paper too, for him to see.

2957. So that the Financial Secretary would decide the case after reading the minutes of the two departments?—He would see both sides of the question on the minutes.

2958. Would it be usual for you, in addition, to have a personal interview with him?—If he sent for me—not otherwise.

2959. Would he usually send for you to talk it over?—It just depends. After a man has been here a considerable length of time he feels greater reliance on himself, and would decide without consulting me; he would see the facts on the paper.

2960. Do you say you have the ear of the Financial Secretary or have opportunities of personal access to him that are denied to other departments?—I should not say so, besides which, of course, if the other departments are dissatisfied with the decision of the Financial Secretary, they have an appeal to the Secretary of State, and although I notice Colonel Hildebrand says it takes a year to get to the Secretary of State, I think Sir Charles Welby could put the Committee right on that question, and tell you that access can be got to the Secretary of State in one day.

2961. Then you said that a good many of the difficulties we have been discussing have been due to the want of adequate reserves being kept?—That is no doubt the primary cause of difficulties which have occurred in this war, that sufficient reserves of many articles, and for which we have to rely exclusively on the trade, have not been maintained.

2962. In fact, I understand your general case in reply to all that has been said is that want of foresight cannot be overcome by hurried purchases in a market unable to supply?—That is so.

2963. (*Mr. Mather.*) You have conveyed to me the impression that your department is overtaxed, not only during this war period, but, as a rule; and that your department having such a vast number of articles to purchase for the supply of the Service, is in a normal state of being understaffed, and that you cannot give to each important matter the attention which, perhaps, it deserves. That is the impression conveyed to my mind?—I only go as far as saying that if we had a larger and more extended staff, we could carry out the ideas which are present in our minds of making more careful inquiries into the capacity of firms, and also into the progress of orders than we do now.

2964. Do you divide your staff of 60 into various departments, and allot to each department the care of

a certain class of contracts?—Yes, that is the way in which the work is divided, according to trades.

2965. And matters come before you only when their importance requires your own personal decision and responsibility?—That is so.

2966. If you were allowed to increase your staff, so as to undertake the work altogether throughout more carefully—I will not say item by item, but as to a certain contract—could you give more time and care to it. If your staff were so enlarged, would you enlarge the respective departments?—No, the departments would not be affected in any way; it would be merely this: that the work of each department would be more carefully and fully supervised. I do not ask for a larger subordinate staff; the staff I want to be increased to a small extent is the supervising staff, that is to say, a proportionate increase of the supervising staff, something like corresponding or corresponding more to the increase of work which has occurred and which is likely to remain with the Contract Branch.

2967. You would like to have over each of these departments in charge of special contracts a head or supervisor, representing yourself, and, as far as possible, having the same qualities you possess?—Quite so, with considerable experience, and one able to go into things. You gentlemen take exception to the action of the department as to those slings, for instance, well, I should like a man whom it would strike, and upon whom you could rely, who would be able to say, "the slings may be required punctually and immediately, we will go on trying to get them, but we will warn the Director-General of Ordnance that there are difficulties in the way."

2968. In a word, if your department were so extended as to contain a certain number of these intelligent heads over the separate branches, your own duties, you think, would be more satisfactorily carried out so far as your own convenience is concerned, because you could make a general supervision of the whole, depending on your departments doing their work efficiently?—Quite so.

2969. At the present time do you find that there is not the possibility of doing that owing to the department being limited?—I do not say there is no possibility of doing it, but I say it is overstrained in doing it. As the honourable member would know, when a man is working 12 or 14 hours a day, it is an enormous strain upon him. I may say, as regards the detail work of the Contract Branch, I limit my time to eight hours a day, but a man who is at the head of a Branch is always thinking of the work he has to perform. You are paid for thinking, not merely for detail work; besides risking my health in doing an enormous amount of detail work would be a great mistake.

2970. So that in addition to your staff, in order to bring it practically to perfection, there would be needed perhaps half-a-dozen more heads of departments of rather exceptional intelligence, and even technical knowledge of the articles they would chiefly have to deal with?—Half-a-dozen we should think a very large order. I have young men at the heads of my four rooms, and the only alteration I propose was to have each two of those rooms put under a higher clerk, a gentleman in the position of a principal clerk, the two principal clerks eliminating a certain amount of the work of the departments sent on to the Assistant Director, and the Assistant Director again eliminating a certain portion, and sending it on to me. My impression is that it is advisable for the head of a department to take up a certain work in its entirety. If anything of importance comes in, my principle is to take it up personally, besides keeping a general view on the current work. I take up a particular branch which enables me to see into it, and see what should be done, and if I see everything is going on right, then, perhaps, I take up another thing. That is the principle on which I try to go. The questions which come up in the Contract Department are of a very varied character; we have a good many very difficult and elaborate cases which have to be gone into. One has to look into the question of the distribution of orders between the trade and the factories, which is another important point. Then I have several difficult questions of dispute to settle, which saves the department expensive litigation, and it is astonishing what variety of questions come up. Generally speaking, the interpretation of contracts gives rise to a number of difficult questions. I am now negotiating for the placing of an order of a half-a-million of money at a cheaper price than is being

Mr.
A. Major.

23 Jan. 1901.

tendered. I do not bargain as a rule, but when the thing is in a very limited market, and there are only two firms, we do bargain as to price.

2971. You have, I see, according to the War Office list, five departmen's in all, including issue and receipt?—Yes, that is under one room. The principal department works for all the branches in doing what we call the mechanical work and scheduling tenders when they come in; it is simply an economical arrangement, and it puts the printers in touch with one department only, instead of having to go to several.

2972. And in seeking the additions you have mentioned to your staff in the form of intelligent supervisors or heads of departments, I presume you would like to select them on the ground that they had some technical and commercial knowledge in relation, for instance, to sub-division 1, in which machinery, tools, scientific instruments, and so on are included. Would you think it desirable for the head of such a sub-division to have more or less practical acquaintance with these various articles here enumerated?—I consider that it is sufficient if the technical knowledge is the technical knowledge which subsists in the departments.

2973. You mean that your relations now with the heads of departments are so close and intimate that you can always get the technical knowledge you require in making a contract?—Always.

2974. (Sir Charles Welby.) To some extent that is qualified, is it not, by the fact that some of those departments are out of reach at Woolwich and Pimlico, and you cannot refer to them without delay in correspondence?—We refer to them by telegraph; sometimes of course we should refer to them on paper.

2975. But that is not quite so satisfactory as an interview, is it?—I agree. One of the functions, and I think one of the most important functions the Director of Contracts has, is that of securing fair competition. One of the disadvantages which occurs in decentralising contract work is that it is performed by people who are here to-day and gone to-morrow; for instance, a contract was accepted locally for meat, which we had to accept because it was done. The Commanding Officer had accepted a very advantageous offer from a man, but other people had not had an opportunity of considering the matter as well. The man had gone out of his way to tender, and the General Officer Commanding accepted it. Immediately on that a complaint comes up to the Secretary of State from another man, "If I had had an opportunity of making the same offer I could have done it cheaper." Take an instance of competition with regard to an engine which is required for electric power at Woolwich, for which we have invited tenders. I daresay 20 firms have tendered for that. To give a sort of outline sketch, a particular firm tendered lowest. If you limit yourself to what is asked for in the tender, there would be no question about giving it to that firm, but there were several modifications made in the tender, and the result of those modifications brought the tender of the first lowest firm to a price above the next tender, and when that comes up to me with the strong recommendation of the military authorities that it should be done in that way, I say "No, you can accept the first lowest tender if it is satisfactory, but if you modify, the other people who have tendered should have an opportunity too of tendering on those modifications." That is fair competition. It is one of the things there is never any question about in my department, that is, alleged unfair competition. Look at the evidence given before the House of Commons Committee with regard to the question of remounts. There were continual complaints, one of the reasons being not, I suppose, that the result was not arrived at fairly, and that the General did not do his best, but that he did not treat the tenders on principles of fair competition as we do. That never would be done if contracts were more largely delegated to military officers who have no experience and who are here to-day and gone to-morrow.

2976. (Mr. Mather.) To them alone you mean?—Yes.

2977. (Sir George Clarke.) Are not the complaints which you have instanced somewhat on all fours with that which the competitors of Messrs. Kynoch made?—That was a notable exception—that is so, of course.

2978. (Colonel Miles.) I should like to understand correctly your views in regard to special purchases. You hold strong views, may I say you resent, in conformity with what you consider your duty, the action of the heads of branches purchasing above the amount laid down without reference to you?—I say they have no authority to do it.

2979. It amounts, in your opinion, to insubordination, does it?—I think it is an insubordinate action on the part of an officer who is only authorised by the Secretary of State to buy to the extent of 25*l.*, to go and buy on his own authority to the extent of 2,000*l.*, without communicating with the Secretary of State. I think that is an insubordinate act.

2980. Do you consider your branch a good judge as to the emergency of military requirements?—I do not understand the question quite. Would you mind giving me an illustration?

2981. Take the question of the web slings we were speaking of. You call it a triviality?—I call it a triviality as regards one instance.

2982. Might not that be a very important military requirement affecting the carriage of the wounded, which would not present itself to you?—We were aware that it was desirable to get those slings.

2983. Would it present itself to you in the full force of its military importance?—Quite; we should be in that case perfectly able to judge that those things were immediately required, and deal with it accordingly.

2984. Sir Ralph Knox stated that an officer who did not on an emergency take the responsibility of a special purchase would fail in his duty; you would not agree in that view, I suppose?—I have not the evidence of Sir Ralph Knox before me. I should like to see in connexion with what matter that remark was made.

2985. With regard to harness. I think an Army Service Corps Officer was sent to purchase mule harness, was he not?—Yes.

2986. Who was not acquainted with the subject, I think you said?—He was certainly not an expert in harness.

2987. But he would be probably well acquainted with mules and mule harness, would he not?—He might have been.

2988. Are you aware that Army Service Corps Officers were for some time previous to the war trained in dealing with mule teams and in driving them and using them with certain wagons?—That might be so.

2989. With regard to mule harness, seeing the importance to the Service, might it not have been as well to have secured as much as possible from America and other places, even if it were not of such good quality as ours, and then gradually to have replaced it by the superior harness as time went on?—No, I think not. Of the inferior harness there was an abundant supply at the Cape, and they had the advantage in buying it of seeing what they bought.

2990. At the Cape?—Yes, at the Cape.

2991. (Mr. Beckett.) I understand you occasionally receive recommendations from the requisitioning heads of departments as to the placing of contracts?—Yes.

2992. What is your attitude towards those recommendations; do you endeavour to carry them out as far as you can?—In regard to recommendations which are made by the manufacturing departments they are always respected.

2993. That means they are taken into consideration, does it?—We call for tenders from the firms whom they recommend for supplying, and we do not place a tender with any other firm or even with one of those firms as a general rule for a special kind of stores without consulting the department before the tender is placed.

2994. You always endeavour to work in accordance with the views of the department as far as possible?—Certainly.

2995. That is as regards the manufacturing departments?—Yes.

2996. What do you do as regards other departments?—As regards other departments, the same practice prevails as to all important stores, but it is not the general practice of the Principal Ordnance Officer to state the firms to whom applications should be made for tenders; he could not do it.

2997. I am only assuming the case when he does state the firm?—I have never known him do so; it would be quite a remarkable exception for him to do so, but if he did, we should certainly take it into consideration.

2998. (*Mr. Gibb.*) Are you not rather confusing between his prescribing the people to be asked to tender and his specifying the particular tender which he thinks should be accepted?—The Principal Ordnance Officer is not, as a rule, ever consulted about the question of accepting a tender; that is always sent to the Director-General of Ordnance. He may consult the Principal Ordnance Officer, I do not know.

2999. But if the Supply Department, either the head or any subordinate officer in the department, expressed a view in favour of the acceptance of a particular tender, would you follow out that recommendation?—Yes; if a recommendation from the Principal Ordnance Officer as regards the acceptance of a particular tender came before me which I thought not desirable to accept, before sending it to the Financial Secretary, I should send it to the Principal Ordnance Officer's chief and ask him if he agreed in the recommendation.

3000. You would never override it?—No, I think not.

3001. (*Mr. Beckett.*) Even if the tender which he recommended you to accept was not the lowest tender?—That would not alter the matter at all.

3002. (*Sir Charles Welby.*) It is laid down, is it not, that on the tenders being referred to the requisitioning authority by the Director of Contracts, he would state what tender in his opinion should be accepted?—That is so.

3003. There is that right, according to the constitution of the Office to state what tender should, in his opinion, be accepted?—Yes.

3004. (*Mr. Beckett.*) I suppose, when the matter is referred to the Director-General of Ordnance, you and he have a conference on the subject before referring it to the Financial Secretary, do you not?—We should, if we thought it expedient.

3005. Of course, you would like to settle the matter without going to the Financial Secretary, if you could?—Certainly.

3006. And it is not often you have to go to him?—Not often.

3007. You said a little time ago that the heads of departments might spend 25*l.* hundreds of times over in the course of a year; but I suppose they do not?—There are a very large number of local purchases made.

3008. Have you any idea what the total amount would average in a year?—I could give you a return. I could not mention it from memory—many thousands of pounds. I will prepare it if the Committee would like it.

3009. I gather from a remark you made that, as a rule, at all events at the beginning of his tenure of office, the Financial Secretary relies a good deal on your judgment?—I do not think so.

3010. But you said he was new to the work?—I do not think he relies on my judgment at all; he relies on his own.

3011. Even at first?—Certainly. He might wish to discuss things more with me at first, but he relies absolutely on his own judgment.

3012. (*Sir George Clarke.*) I want to ask you a question about the correspondence which arose with a certain contractor in a certain district. I do not want to name the district or the contractor, but I will hand you the name of the contractor. On the 5th August 1899, a General Officer Commanding reported that it was for consideration whether a certain contractor employed in building certain barracks should not be removed from the War Office list on certain specific grounds. Do you remember that case?—Yes.

3013. On the 8th November 1899, the same General Officer Commanding recommended the non-acceptance of the same contractor for the fortification service, is that so?—I take your date, but I could not possibly state from memory the absolute date upon which any recommendation of that kind was made.

3014. On the 23rd December 1899 the same General Officer Commanding recommended that the same contractor should not be allowed to tender again on

account of remissness in connexion with the Service. Was a tender accepted from this contractor, nevertheless, for the particular work for which it was specifically recommended he should not have without any explanation being offered to the General at the station?—The acceptance of the tender that came in upon that occasion would be with the concurrence of the Inspector-General of Fortifications. Any departure from the recommendation of the General Officer Commanding, if it occurred, would be not for me to communicate to him, but for the Inspector-General of Fortifications if he thought it necessary.

3015. Did the General point out, on the 29th March 1900, that no reply had been received by him, and did he press, on the 25th April, for a reply, and did you write on the 7th June intimating that the contractor to whom the General Officer Commanding objected should be included in the list of firms for tendering, and, at the same time, did the General Officer Commanding apply for a reply again?—I will give the Committee a statement with regard to this particular firm. The firm to whom you refer are a firm of builders who have undertaken very large works for the department. They have saved the department many many thousands of pounds, and, as a general rule, they have done their work exceedingly well. The Inspector-General of Fortifications for some reasons, which certainly appeared to be insufficient to me, wished to take this firm off the list. They resisted, and as the matter had arrived at an acute stage, I thought it better to submit the question fully to the Secretary of State, and it also embraced the question of that particular contract which was referred to by the General Officer Commanding the district. The character of the contractor, the pros and cons in his favour from the different districts where he had performed work, were obtained and laid before the Secretary of State for his consideration. The Secretary of State had absolutely full grasp of the whole question, and he decided that this firm was to be kept on the list. Although, as I said before, he went very fully into the case, he did not consider the objections urged to the employment of this contractor were sufficient to justify him in saying that he should not be employed. Notwithstanding that decision, which, as I have said, was given by the Secretary of State, I have been approached from time to time since with regard to the suspending of the contractor, and I have merely said this, "The Secretary of State says he is to be employed, and I have no power to consent to his non-employment without your going to the Secretary of State again and getting his decision." They were perfectly open to do it, but it has never been done, and the consequence is the contractor is still employed. I should mention that the Secretary of State said, "If there is any further case against this contractor, I will consider it," but no further case has ever been brought before him in connexion with the matter.

3016. Can you say about what date the reference was made to the Secretary of State?—The reference was made to the Secretary of State before the General you refer to raised the question. It was not for me to communicate with the General Officer Commanding. The proper person to communicate with the General Officer Commanding was the Inspector-General of Fortifications, but he has not done it.

3017. To complete the matter, did the General Officer Commanding again, on the 7th June, write a letter, crossing yours of the same date, and making a fourth appeal? In this correspondence, which began on the 5th August 1899, did you, on the 3rd August 1900—almost a year later—write to the General, approving the list of firms he had sent, subject to the inclusion of the firm which the General had been protesting against for more than a year?—No doubt on the instructions of the Secretary of State.

3018. Did the General Officer Commanding again, on the 7th August, complain somewhat bitterly of the way he had been treated, that he had never received any answer to his representations on the subject, informing you that a *prima facie* case of corruption had been made out against the firm, and, lastly, on the 1st October 1900, did the General Officer Commanding suggest that the case should be referred to the Secretary of State for decision, and has it been referred to the Secretary of State since that letter of the 1st October?—I think so.

3019. For the second time?—I think so.

Mr.
A. Major.

23 Jan. 1901.

Mr.
A. Major.
23 Jan. 1901.

3020. Has the General Officer Commanding ever been informed that the Secretary of State has decided that this firm is to be included in the list?—I believe so.

3021. (*Chairman.*) Would it be your business to inform him, or the duty of the Inspector-General of Fortifications?—I think it would be the duty of the Inspector-General of Fortifications to inform him; I communicate the acceptance of a contract. There was a charge of bribery and corruption alleged against somebody, and the moment bribery and corruption is alleged against anybody, it is essentially the duty of the Director of Contracts to go into it. On that point I should communicate direct with the General Officer Commanding, and I did, and it was proved, and brought before the Secretary of State, that there was not a tittle of evidence against anybody in that case either against the contractor or any of the people concerned.

3022. When this case was brought before the Secretary of State—which I understand you to say has been done now twice, first, at an early stage of the proceedings, and, secondly, on the recommendation of the General Officer Commanding—would the Inspector-General of Fortifications be present to represent his view of the case?—I could not say; it would depend entirely on whether the Secretary of State considered it necessary to send for him.

3023. Then it is possible the case might be represented to the Secretary of State without the Inspector-General of Fortifications, an officer who is responsible for the efficient building of the works, being present?—But his views would be on the papers, and I cannot admit that the Inspector-General of Fortifications is responsible. My point is that the person responsible for all these things is the Secretary of State, absolutely.

NINTH DAY'S MEETING.

At the War Office.

29 Jan. 1901.

Tuesday, 29th January 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, O.B., M.V.O.
Sir CHARLES WELBY, Bart., O.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Draft regulations for the Contract Branch were framed and considered.

TENTH DAY'S MEETING.

At the War Office.

30 Jan. 1901.

Wednesday, 30th January 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Draft regulations for the Contract Branch were further considered.

ELEVENTH DAY'S MEETING.

At the War Office.

Thursday, 31st January 1901.

31 Jan. 1901.

PRESENT :

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.O.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Papers dealing with the existing system of War Office Audit and Financial Control were read and discussed.

TWELFTH DAY'S MEETING.

EIGHTH DAY'S EVIDENCE.

At the War Office.

Monday, 4th February 1901.

PRESENT :

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.O.M.G.
Mr. G. S. GIBB.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Mr. ROBERT CHALMERS, C.B., called and examined.

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

3024. (*Chairman*.) I believe you are a Principal Clerk at the Treasury, are you not?—Yes.

3025. It is through you that the greater part of the correspondence between the Treasury and the War Office passes?—The whole of it, with the exception of that as to Civil pensions.

3026. Would you kindly turn to Mr. Marzials' memorandum? Do you consider the memorandum is a generally accurate account of the relations between the two departments?—That is so.

3027. You might call the attention of the Committee to any minor corrections you have to make in it, but, I think, in the meantime, I will ask you to go through certain points in the memorandum. I would direct your attention, first, to paragraph 5. "Speaking generally, the Secretary of State has power to transfer money from one item to another in the same sub-head of each Vote, provided the sub-head itself is not exceeded. But, speaking generally again, deliberate transfers between different sub-heads of the same Vote, and still more between Vote and Vote require Treasury sanction. In practice, the formal previous sanction of the Treasury for a transfer between two sub-heads of the same Vote is not asked for, unless some change of policy is involved; for instance, a rise in the price of food or forage would be met, as a matter of course, by a saving on fuel or rents if there happened to be any saving available on those items. But formal application is always

"made towards the close of the financial year for authority to meet any probable deficits on particular Votes by probable savings on other Votes." As regards transfers between Vote and Vote, therefore, I understand that the Treasury's sanction is always necessary?—Yes, under section 4 of the Annual Appropriation Act, and the Treasury sanction, I should like to point out, is a temporary sanction only; the permanent sanction for a transfer between one Vote and another is a power which Parliament reserves to itself, and confers on us a temporary power only, where the Treasury is satisfied that postponement of the unforeseen and urgent expenditure would be detrimental to the Public Service.

3028. Therefore it comes to this, that Parliament has delegated to the Treasury the powers of provisional sanction?—That is so; provisional sanction,—and with the power, of course, goes the responsibility for acceding to a re-arrangement of moneys voted by Parliament.

3029. That is to say, you exercise the power of provisional sanction, subject to a reference to Parliament?—Yes, it is only provisional sanction, and Parliament eventually, if it sees fit, does give a permanent sanction by Statute to what we have provisionally sanctioned.

3030. (*Mr. Gibb*.) What is the Act?—The Appropriation Act of each year.

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

3031. (*Chairman.*) Does Parliament, as a rule, confirm the provisional sanction which you have given?—I am not aware of any instance where it has ever refused to confirm what we have sanctioned. I am aware of one case—an Admiralty case—where we refused to give a sanction for a transfer between Vote and Vote, because we thought the expense must have been foreseen, and the Admiralty should have come to us in the first instance. We thought there was a great financial irregularity, and we therefore refused, when they asked us to sanction a transfer between Votes, to do so. The matter came before Parliament, which took very considerable notice of the matter, and laid down the doctrine that previous sanction was to be obtained, and eventually Parliament said: "Perhaps the Treasury will now exercise its provisional power." We did so, our purpose having been attained of drawing the attention of Parliament to what we considered an irregularity on the part of the spending department.

3032. (*Sir Charles Welby.*) How long ago was that case?—It was about 1886. I think it had to do with the Victualling Vote of the Admiralty.

3033. (*Chairman.*) Then, in consequence of that incident, did Parliament lay down more distinctly than ever that the Treasury was to exercise its power of provisional sanction?—Parliament did, if I may take the Public Accounts Committee as the mouth-piece of Parliament in the matter.

3034. Supposing, *as hypothesi*, that this action of the Treasury in giving provisional sanction were eliminated, would the consequence be that more questions on Supply would ensue on War Office Votes, and that there would be more questions between the War Office and the Public Accounts Committee?—That is a question on which, at the end of last week, I consulted all those officers of the Treasury who would be more particularly prepared to give an opinion, and it was their very definite anticipation that the troubles of the War Office, both in Supply, and before the Public Accounts Committee, would be very much increased if the Treasury power were conferred on the Secretary of State. It is a question of anticipation and of considering what Parliament would do, but our anticipation is that Parliament would be very jealous of any departure from the programme on the strength of which it has voted money, and our anticipation is that Parliament would probably, through individual Members, give a very considerable amount of extra trouble. They repose a very considerable amount of confidence in the Treasury, and in the absence of what is called Treasury control in the matter, I believe the difficulties of the department would be very considerably increased. That is the Treasury opinion, but it is only an opinion.

3035. Assuming, in your case, this provisional power of the Treasury were eliminated, the Treasury might be relieved of a considerable amount of work, and the War Office from none?—It is a duty which is imposed on it at present.

3036. Is it correct to say that if the Treasury were not vested with this provisional power, delay might occur?—Are you speaking as between Votes, or as between subheads?

3037. I am now speaking as between Vote and Vote?—As between Vote and Vote, I cannot conceive that delay would arise or that delay does arise. A Vote is an agglomeration of subheads; excess arises, not on a Vote as a whole, but on different heads, and before there can be an excess on a Vote there must have been a number of decisions on facts relating to subheads, and it would be in connexion rather with a subhead than a Vote that delay would arise.

3038. Let us pass to subheads now. I understand that in regard to subheads, where no change of policy is involved, for instance, where there is a transfer of money owing to the savings on cheaper forage going to pay for dearer fuel, the War Office would make the transfer as a matter of course, getting a sort of formal indemnity or authority at the close of the year?—That is the practice, and it is a practice which does not extend to the Admiralty. I may, perhaps, state to the Committee that the same division of the Treasury deals with both War Office and Admiralty, and we try to look at both departments together. The Admiralty comes to the Treasury very much more frequently on a subhead. Before incurring excess on a subhead the Admiralty will come and say, "These are the reasons; will you agree to our having an excess on a subhead?" As

Mr. Marzials states in his memorandum, the War Office never does so, but the Admiralty very frequently does.

3039. But the War Office would do so where the transfer involved a change of policy, would it not?—It certainly should do so in such cases, as indeed for all foreseen excesses, though I am bound to say I do not remember an instance at the moment—I do not remember such changes of policy. I am not speaking, of course, of war time, but of general normal times, and my experience in my present position does not go very far back before the war as to those matters.

3040. Practically speaking, the Treasury control as regards transfer from subhead to subhead does not exist in the case of the War Office?—In practice it has not existed for some time.

3041. Has it been allowed to lapse?—It has gradually been allowed to lapse.

3042. In your opinion, is there any advantage in its having been allowed to lapse, or would there be any advantage in making it stricter?—From the point of view of the Treasury the essential thing would be that the Accountant-General, who is, I may say, the responsible trustee for the War Office moneys, should be in a position to know before excess expenditure is incurred—he should be able always to see his account and how it stands, and never be involved in an excess without his knowing it. In order that he may be in that position there is a certain measure of strength—I think in practice a very considerable measure of strength—in his being required to come previously to the Treasury and to state the facts. The value of the reference to the Treasury beforehand, which is the regulation in the matter, and the strength of coming to the Treasury lies in this, that it would make the Accountant-General keep a close watch on subheads, and it is out of excesses on subheads that those excesses on Votes arise, on which Parliament requires the War Office to seek the provisional approval of the Treasury.

3043. Without referring to the Treasury, would not the Accountant-General of the War Office be cognizant of any transfer from subhead to subhead?—Of course it would arise as an excess on an individual subhead. What his position is and the control that he actually does exercise in the War Office is a matter on which I cannot speak; but it is certainly most desirable, in the interests of financial regularity, that the Accountant-General should always see how exactly his Vote stands and how the various subheads stand, so that he may not find himself involved in an excess even on a subhead. He ought to have a certain measure of strength given to him as against those officers who are spending officers by saying, "Here is the position, we are over-spending our subhead, and it is my duty before any further expenditure is incurred to go to the Treasury."

3044. My point is, could not the Secretary of State for War support his Accountant-General sufficiently to enable him to have prompt information from the spending officers? He has sufficient authority without having to rely on the support of the Treasury, has he not?—Excesses arise, as I say, on and in subheads, and those things in which the Treasury is most interested are excesses which arise from diverting deliberately the money Parliament has given for one purpose to another purpose: in that matter, as to foreseen expenditure, for which Parliament has made no provision, I think it proper there should be a reference to an outside body.

3045. But in such a case as a transfer, supposing some circumstance which cannot be foreseen, such as forage being unusually cheap in one year and fuel being unusually dear, is there anything unnatural that the money saved in forage should be applied to making up the price of such an article as fuel?—No, not at all. The Treasury would have no desire in such a case as that to require sanction beforehand; but in those bigger cases which are foreseen, if there happens to be a saving, and the question is: Shall we use this money for a purpose for which Parliament has not given the money?—I think it is the bounden duty of the War Office to come to that department which represents Parliament in the matter.

3046. But, as a matter of fact, that is not the practice at present, is it?—That is not the practice at present of the War Office, though it is to a much greater extent the practice of the Admiralty.

3047. (*Mr. Beckett.*) Even in the case of the Admiralty, where the excess is met by a deficit, is it the practice to

consult the Treasury?—In all important cases they always do so beforehand.

3048. (*Chairman.*) The Committee have a schedule of letters sent to the Treasury in 1898 and 1899, and I see that in 1898 there were 114 letters on the subject of Estimates, and in 1899, 122. Would those letters deal with the compilation of the Estimates and the transfers from Votes to Votes?—This, of course, is a return which has been made up for the Committee at the War Office, and I am not quite clear what is included in "estimates."

3049. It includes Supplementary Estimates also?—It seems to be a very wide heading. The number of papers that would come under the subject of Estimates would, roughly speaking, be a score, including supplementaries. There might be 30 with Estimates proper in the year, the rest would be as to questions on personnel and staff.

3050. Will you please pass to paragraph 7 of Mr. Marzials' memorandum. With regard to the Dispensing Warrant, would it not be possible, without involving any prejudice to public interests, to give the Secretary of State for War a certain sum, in order to meet these exceptional cases, as long as the expenditure he authorised was not permanent, and did not involve any alteration in permanent rules?—Do I understand you to mean a lump sum for the purpose of a Dispensing Warrant?

3051. Yes, a sum per annum?—Every case you deal with under a dispensing warrant is recurrent in this way, that it forms a precedent. It is very difficult indeed to deal with a case exclusively by itself.

3052. I mean to distinguish between such an expenditure as a gratuity, which does not occur in the way that a pension does, and a pension?—But the Dispensing Warrant states that rates may be given to persons other than the rates and persons specified in the ordinary pay warrant. I think you would find there would be a very considerable loophole in the pay warrant if you gave the Secretary of State power to dispense with the provisions of the pay warrant without coming to us.

3053. If the Secretary of State had a limited amount, could he not, in small and urgent cases, act on his own authority and so minimise correspondence?—I am not aware there is any particular difficulty in coming to the Treasury there. The principle which is involved is, that the Secretary of State cannot say, "I shall be very pleased to do this myself, but I am afraid I should have to go to the Treasury for consent." The Secretary of State's position would be a much weaker one if it was known he had a dispensing power to grant exceptions in individual cases; every individual case thinks it is exceptional and worthy of exceptional treatment. I should have thought the Secretary of State would not wish to have a general power in that respect.

3054. But it would be a general power within limits?—I do not know what limits you could lay down. A dispensing warrant has reference to giving pay to people, departing from the ordinary rates laid down in the pay warrant. I have not considered the question of limits; but being faced with the question, I do not see quite what limits it would be possible to lay down.

3055. The limit would have to be a money limit, I think, agreed upon between the Secretary of State and the Treasury of so much per annum?—A money limit in other matters—such as contingent expenses—is a thing which the Treasury would be prepared to yield, but in the case of the Dispensing Warrant my own idea would be that the War Office would not care to have such a power. As regards money for other purposes than those of pay and allowances, I could imagine it would be salutary if fuller powers were given to the War Office.

3056. Is there much correspondence between the Treasury and the War Office with regard to special cases under the Dispensing Warrant? I see in this return of correspondence under the heading of "Pay," there are 110 letters given for 1898 and 136 letters given for 1899. Would most of those deal with cases under the Dispensing Warrant?—This is not my own return, and I cannot exactly say what is in it; but roughly speaking at a guess, I should say not more than half would be on the Dispensing Warrant.

3057. (*Sir Charles Welby.*) Do you think cases under the Dispensing Warrant have increased during the last few years?—They have increased very considerably in connexion with the war, but otherwise I should say they have not. The War Office is very careful not to come, and perhaps that care would not be strengthened by departing from the existing provision.

3058. My impression was that the power was rarely exercised by the Secretary of State?—I think the War Office do not come unless they can help it. It is important to get a document which people can understand.

3059. (*Chairman.*) Will you please pass to paragraph No. 10 of Mr. Marzials' Memorandum: "All new Civil situations, whether included in the Army Estimates under Establishment, New Works, or otherwise, are to be submitted to the Treasury if they carry with them rights to pension under the Superannuation Act." That is so, I suppose, because the Treasury is charged by Parliament with administering the Superannuation Act?—That is so, and there is a reason, perhaps, why that should be so, even if we did not administer the Superannuation Act; and that reason, I think, is this, that, if the Treasury fulfils its functions properly, it is a body which is cognizant with all departments and ought to be able to say, roughly speaking, this is a right or a wrong classification; we ought to be in a position to consider establishments with a larger and fuller knowledge than any individual department.

3060. But as a matter of fact, the Treasury does administer the Superannuation Act for all the departments, does it not?—Yes.

3061. I see that in 1898 and 1899, from a glance at this return of letters, roughly speaking, about one-third of the letters to the Treasury dealt with superannuation. These, I suppose, were not much more than formal applications to you to vote pensions?—Yes, but they are dealt with in anything but a formal spirit by the Treasury. It happens to be not my branch of the work, but I know the exercise of the Treasury powers, and they are very strict.

3062. They do not give rise to much correspondence, apparently, from this return. The note to it states:—"These letters not being analysed are mostly formal applications provided by Act of Parliament, and it would be assumed they were all sanctioned?"—I should doubt if that assumption is true; but, as a rule, the case of an ordinary Civil Servant is a simple case in 99 cases out of 100, but the odd 1 per cent. is frequently very difficult.

3063. The point I want to get at as regards the correspondence between the Treasury and the War Office is this: about a third of the correspondence seems to deal with cases under the Superannuation Act, and there would be no possibility of minimising that correspondence, would there?—No, under statute the Treasury must award the pension.

3064. You will see under paragraph No. 10 the words, "Appointments of hired men at market rates, or on scales of pay or wages fixed by regulations approved by the Treasury, do not require Treasury approval unless they will cause an excess on the sum taken in the Estimates." In the same way as the Treasury generally administers the Superannuation Act, I suppose the Treasury lays down the general regulations for payment of wages in order to secure uniformity throughout the Public Service?—That is so, as far as possible. These things ramify from department to department very considerably. It is very important there should be uniformity, as far as possible, in the regulations which govern the remuneration of men performing analogous functions for the State in different departments.

3065. (*Mr. Gibb.*) Do you mean applicable to all districts?—It varies with districts, but given similar conditions, the same rate should, as far as possible, apply.

3066. (*Chairman.*) Will you please turn now to the next paragraph, No. 11, "No new work, that is Fortification or Army building of any magnitude provided for in Army Estimates is to be commenced without the previous sanction of Parliament; but if the work be urgent, the Treasury have power to sanction commencement without waiting for the Vote of the year." I take it that that means that, if the Vote for Works cannot come on, owing to the

Mr.

4 Feb. 1901.

pressure of other business in Parliament, for two or three months, the Treasury have power to give provisional sanction to the undertaking of a work after the 31st March so as not to involve delay?—We do it; I do not know that we have, or need, any specific power in such cases, but we undoubtedly do take the responsibility, and would continue to take that responsibility gladly when we are convinced that it would be detrimental to the Public Service to wait.

3067. Is there any reason why the Secretary of State for War should not undertake the responsibility himself?—I think there is a distinct reason. Where Parliament has not expressed an opinion, either by granting or appropriating the money, I think it is very dangerous for the spending department itself to venture to assume Parliamentary sanction. I anticipate that very considerable difficulty would arise with Parliament if it were thought that a department assumed Parliamentary sanction and regarded Parliament as a mere registering machine. I think, to prevent any possibility of such ideas becoming prevalent in Parliament, it is most desirable that the anticipation of Parliamentary sanction should be extremely limited in extent, and that the responsibility should be shared by an independent department—shared by that department, moreover, on the strength of formal statements of the reasons which require the spending department to anticipate Parliamentary sanction.

3068. But the Treasury would exercise this power not only as regards the War Office, but as regards other departments, I suppose?—Yes, every department. It is very desirable that every department should come to the Treasury before venturing to anticipate the sanction of Parliament to a new work or a new service.

3069. That is, in your opinion, the Treasury has grown up to be practically a sort of outpost of Parliament, and if the Treasury sanctions any proposal there is a great probability that Parliament will accept it?—Yes, so long as the Treasury does not take on itself functions which Parliament would consider should reside in it, and be retained for it. If the Treasury were, at the mere bidding of spending departments, to assume Parliamentary sanction, I can readily conceive that the functions of the Treasury would be very considerably reduced.

3070. (Mr. Beckett.) Reduced by Parliament?—Reduced by Parliament.

3071. (Chairman.) But if the work is urgent, the Treasury have power to sanction its commencement, have they?—We do so, and should always continue to do so if we were satisfied it would be detrimental to the Public Service not to begin.

3072. The Treasury is the judge of what is urgent, is it?—We see if there is a *prima facie* case of real urgency.

3073. Supposing the War Office declares on military grounds that such and such a fortification is urgently wanted, do those military grounds have to carry conviction to the Treasury before it gives its sanction?—Yes. In most of these cases, it is true, they may have reference to expert matters, but soldiers are capable of making business-like statements, and it is those business-like statements which the Treasury requires, and on such *prima facie* evidence as would satisfy a reasonable man, the Treasury takes on itself the responsibility of anticipating Parliament; but it is very chary of so doing.

3074. With regard to funds for works and building services in the Army Estimates, they are divided into three separate parts. With regard to works and building services under Part 1, each work, I understand, is treated as a separate item?—That is so.

3075. It is treated as a separate item for insertion in the Estimates, and once inserted in the Estimates, the War Office can proceed to carry them out without further reference to the Treasury, can they not?—Within the amount sanctioned by Parliament, and subject to certain percentages which have been recently given to the War Office, so as to save them coming too frequently to us with little casual difficulties.

3076. But for the simplification of the Estimates, could not all the works under Part 1 in any particular district be thrown together; instead of having conceivably ten different items of 1,000*l.* each, could not 10,000*l.* be voted together for ten works in one district?

—I think, if it were thought desirable by the War Office or this Committee, the Treasury would be prepared to do that. You are speaking, I presume, as regards the provision for the year?

3077. Yes?—As regards the provision for the year, the Treasury would be quite prepared to lump together the provision for the year for cognate works in a district, as you say.

3078. In the district or unit?—Yes, in a given district. That would mean, I may add, if it were carried out, a considerable amount of saving in correspondence. Take the case of there being 10 works, and the War Office, with its anticipations in November or December, thinks it will spend 1,000*l.* on each of those works in the coming year. As a matter of fact, it is impossible for anyone to spend just 1,000*l.* on any 10 given works, and without the slightest irregularity the War Office may find it has spent 500*l.* each on five of them, and 1,500*l.* each on the other five. That is a matter in which there has been no excess over the amount voted by Parliament, but it has been a pressing on of the programme in one quarter and being behind in other quarters. I think it is quite a proper thing the provision should be the 10,000*l.* for the whole of those 10 works instead of being 1,000*l.* for each of the 10. In such a case there would be a saving of five letters to the Treasury.

3079. That would lead to a reduction in correspondence then?—Yes.

3080. (Mr. Gibb.) Are you now speaking of individual works within subheads?—Yes.

3081. (Sir Charles Welby.) Do these changes you suggest affect Part 2 as well as Part 1?—Part 1 only; Part 2 is done already. There has been much stricter control kept over works both by Parliament and by the Treasury, than over any other thing in the Service.

3082. (Chairman.) I see in this return of correspondence there are more letters both in 1898 and 1899 under works than there are under any other heading except the Superannuation Branch?—Yes.

3083. As regards Part 2 and Part 3, "New works and alterations, estimated at less than 1,000*l.*," and "Ordinary repairs and maintenance, estimated at less than 1,000*l.*," the Treasury treat as distinct items the totals of Part 2 and Part 3 for all home stations and all foreign stations respectively. Will you explain to the Committee exactly what is meant by that?—It means in practice that the War Office need not come to us if they do not exceed the total either under Part 2 or Part 3 for a given group of stations.

3084. (Sir Charles Welby.) The War Office might give up building a hospital, for which they had obtained sanction as to funds, and build a store with the same money?—Yes, if it was under 500*l.*, which would mean a very small hospital, of course. I do not think in Parts 2 and 3 the War Office would wish for greater freedom than they now possess.

3085. (Chairman.) That is to say, you enter in the Estimates the totals of Part 2 and Part 3 work for a particular station?—That is so.

3086. And if they keep within the total, the War Office does not come to the Treasury?—That is so.

3087. But if they exceed that total they have to come to the Treasury, even though they have effected a saving in another station?—That is so; of course, each station stands alone.

3088. To go on with paragraph 11. We now come to excesses under 1, 2, and 3. Excesses in these cases are always reported to the Treasury, but I understand the Treasury does not take any action. If an excess is incurred, the Treasury cannot order it not to be paid, can it?—The Treasury may be consulted before the excess has arisen, or after the excess has arisen. If it is consulted beforehand, it can say, theoretically, "You shall not go on with the work;" if it is consulted afterwards, it can say simply this, "We do not sanction the charge against the Vote"—that is to say, the Treasury can say to a department, theoretically again, "You shall not include this amount in the 'Appropriation Account.'" In practice, that power is never exercised, but what the Treasury does do, is to say that they have observed that the total which was originally 1,000*l.*, grew the next year to 2,000*l.*, the year afterwards to 4,000*l.*, and it is now 6,000*l.* It points that out in its letter sanctioning the charge, and Parliament very generally, and very frequently, refers

to that, and puts a department, when it comes before the Public Accounts Committee, on its defence, to explain why its Estimates were so wild.

3089. I understand, then, this practice of reporting to the Treasury amounts to a method of securing publicity of these excesses?—That is practically what it is—publicity for Parliament.

3090. The correspondence between the War Office and the Treasury on the report of an excess being printed with the appropriation report, and laid before Parliament?—That is so.

3091. And if publicity was not secured in this way, I suppose it would be secured in some other way; the Committee of Public Accounts or the Auditor-General, I suppose, would disinter the excess, and comment upon it?—They might. Our power, in practice, is very limited indeed, except drawing attention to the fact that estimates were made, and had not been carried out. If it was an extremely bad case, we should refuse to sanction it.

3092. What would be the consequence of the Treasury refusing to sanction?—The Accountant-General, if he had paid over the money, would be personally responsible for providing the money which had been paid over in excess of the Parliamentary provision.

3093. Has such a case arisen within your knowledge?—Not in connection with works.

3094. Then the report of the Treasury practically draws publicity to the excesses, and is a means of warning people to make careful estimates?—That is so, in all those cases which in practice do arise.

3095. Then paragraph 11 of the Memorandum goes on, "Any works of an urgent nature required during the year, and not provided for in Army Estimates, the estimated cost of which exceeds 1,000*l.*, requires the previous sanction of the Treasury. When funds are not available on Parts 2 and 3, services of an urgent nature, estimated at a cost less than 500*l.*, may be undertaken without previous Treasury sanction, a quarterly statement being submitted to the Treasury of such services; while for services over 500*l.*, special Treasury sanction must be obtained. Treasury sanction is given in such cases on the understanding that the excesses will be met by savings on the Vote generally." Is Treasury sanction always given on that understanding?—Oh, yes; the Treasury can only sanction a new service if there is old money for it; we have no power to vote money; we can only deal with money already voted, and we have to be satisfied always that there is money.

3096. Is there much correspondence about works of this nature?—Yes, a very considerable amount as to bigger works, not these little ones. As to these little works under 500*l.*, there is very little correspondence except the quarterly schedule.

3097. Is that practically all the correspondence?—Yes, it simply states the fact.

3098. Following on with paragraph 11, we come to a list of cases in which Treasury sanction is necessary. (A.) For the purchase, sale or exchange of land or premises, when the estimated value exceeds 1,000*l.* (B.) For interest payable on purchase money for land or premises, if there is anything unusual in the claim either as to amount, rate, period, or in any other way. (C.) For services executed jointly with Colonies (e.g., Malta drainage). (D.) For contributions towards cost of works, &c., made to public bodies or private individuals. (E.) For the insertion in Army Estimates of a service estimated to cost over 30,000*l.* What is the reason of the necessity of Treasury sanction in those cases?—All the instances of Treasury control with which the Committee is familiar through this Memorandum have arisen in the distant past, and in nearly every case they are the requirements of the House of Commons. The House of Commons laid down this rule as to the purchase, sale, or exchange of land or premises, and the Treasury obeys the wishes of the House of Commons in the matter.

3099. (Mr. Gibb.) This, I understand, is prior to the matter being submitted to the House of Commons?—That is so.

3100. (Sir Charles Welby.) And all through, when you refer to the House of Commons, you really refer to the Public Accounts Committee as representing the House of Commons?—I do. In earlier times there was no Public Accounts Committee, but there were

special committees which did express the public opinion of the House.

3101. These points do not come within the cognizance of the House of Commons as a whole, do they?—No, they do not.

3102. (Chairman.) But the House of Commons from time to time in the past have laid down that the Treasury sanction is necessary in these cases?—That is so.

3103. (Mr. Gibb.) That seems to exclude the power of the House of Commons altogether?—The House of Commons has no power to add anything to an estimate.

3104. But if Treasury sanction is necessary prior to submitting a proposal for the purchase of land to the House of Commons, and the Treasury refuses, the proposal never could come before the House?—That is so.

3105. So that the Treasury controls the House?—The House can only reduce provision; it can never add provision. That, of course, is a fundamental principle of our financial system. The House of Commons can only refuse to vote what it is asked to vote.

3106. (Sir Charles Welby.) It cannot initiate expenditure?—No; if it wants to add anything for a Service, it can only proceed as a matter of form by proposing to knock something off.

3107. (Chairman.) As a matter of fact, do you think there is any particular value in the Treasury sanction being necessary for the purchase, sale, or exchange of land?—I think the total might be increased; and my only reason for suggesting that there should be a total and a maximum is this, that I think in big matters of this sort, which commit Parliament, it is as well that there should be on record an authoritative statement of the views of the department in the name and on the responsibility of the head of the department. I think it is a question of degree as to where you would draw the line.

3108. The Treasury would have no particular knowledge as to whether such and such a thing was advantageous or not?—No, we should say, "Have you been advised by a competent valuer in the matter?" and ask why the land was wanted. Those are questions which the War Office would anticipate in its letter and are the questions which would arise in the mind of any person, and it is no peculiar hardship on the department to record them.

3109. (Sir George Clarke.) Is it not rather a reflection on the Secretary of State for War to assume such an inquiry has not been made?—I say it is assumed those inquiries have been made; but you will remember it has been imposed upon us as a Parliamentary condition, and you will remember that I have said I think the limit might be increased.

3110. (Chairman.) If the limit were increased, would it avoid delay in correspondence?—I do not think there is any delay in these matters. If there is anything very urgent, in practice, the Accountant-General or one or other of the officers of the War Office comes to the Treasury. It takes perhaps twenty minutes in all.

3111. Still, *pro tanto* there is that delay?—There are very few cases, I think, where a delay of twenty minutes is fatal to the interests of the War Office.

3112. (Mr. Gibb.) What puzzles me is why the Treasury sanction should be necessary for the purchase of land, and not necessary for other expenditures of money of probably much greater amount?—I have tried to explain that the reason is partly historical, and perhaps the reasons which justified the conclusion in the past do not wholly apply to-day.

3113. (Chairman.) That is to say, a duty has been put upon the Treasury as the result of something which happened in the past, but present circumstances do not appear to make it imperative that this sanction should be demanded in every case?—Not in every case, and within the existing limits.

3114. But as a matter of fact has not the War Office ever agitated, or asked that the limit should be increased, and their hands should be, so to say, united?—I believe the War Office has not asked for any power in this matter which it does not at present possess.

3115. (Chairman.) As regards the interest payable on purchase money and the Treasury sanction, has it grown out of some historic incident, or is there any present reason for it?—If there is anything unusual

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

in a claim as to amount, rate, period, or in any other way, the idea of that (and I cannot inform the Committee as to the exact origin) is that, if the department is doing anything exceptional, it should state its reasons.

3116. (*Mr. Gibb.*) I suppose that means a rate unusually high, not unusually low?—That may be assumed, I think. That is a question, the Committee will observe, of degree; to a very great extent, it depends on what is regarded as unusual. If there was an extreme case of a man insisting on 10 per cent., or something of the kind, the War Office would not like to pay 10 per cent. without explaining their reasons, and getting us to share their responsibility—it means coming to the Treasury to share the responsibility of the War Office. In practice, there are no such cases with which I am familiar.

3117. B. practically follows A., does it not—that the rate of interest payable is generally part of the purchase bargain?—It follows as B. follows A., but I do not think there is any other connection between them.

3118. The interest dealt with here is interest on the purchase money, probably between the contract date of completion and the actual date of completion?—Yes.

3119. So that the rate of interest would be part of the bargain, would it not?—If the money were not paid over at once, it would be to that extent.

3120. (*Chairman.*) As regards C., the words are, "For services executed jointly with Colonies." I suppose the Treasury sanction there is necessary, in order that there may be one central department to bring the other departments into harmony?—Yes. That Malta drainage is a very difficult case; it practically means that we ask the Colonial Office to join with one of our representatives to consider what is best, and what is the best bargain to be made. I think it is very desirable there should be communication between the departments in a case like that. It is not a case of Treasury control, but a desire to make a business-like arrangement, and enter into relations with the other people who share the business. I should not call that Treasury control.

3121. You mean they enter into them through the Treasury merely?—They enter into them through the Treasury.

3122. D. is "For contributions towards cost of works, &c. made to public bodies or private individuals." I suppose there is not much reference or correspondence arising under that head?—Very little; it is one of those cases which come under the general sort of rule, that in dealing with anybody, or under circumstances which might suggest suspicion, then the War Office likes to come, in its own interest, to explain the matter and be above board, and the Treasury shares its responsibility on the *prima facie* case the War Office is able to put forward.

3123. Any contribution towards the cost of the work made to public bodies or private individuals practically means a deviation of trust funds from the purposes for which they were intended to something else?—Yes, there is always a considerable suspicion of public departments, and it is as well that everything should be above board in the matter.

3124. Then as to E.: "For the insertion in Army Estimates of a service estimated to cost over 30,000*l.*" Is that Treasury sanction necessary before the service is inserted in the Estimates; and after it has been inserted in the Estimates, does the Treasury then again approve the Estimates?—That is so; both of those statements are true. But take the case of a large work which has been put into the Estimates, which will reach the Treasury very shortly; if that work were included in the Estimate, and the Treasury had never seen it previously, the Treasury sanction of the Estimate would not cover the individual work, for this very good reason: that an estimate reaches the Treasury very shortly before it is presented to Parliament.

3125. It practically means, does it, if the detail is a large one, the Treasury want to have time to look at it and scrutinise it before insertion in the Estimate?—Certainly; a thing like this, costing 30,000*l.*, is a thing for deliberate consideration.

3126. (*Sir Charles Welby.*) And these Votes in the lump do not reach you, do they, practically until a few hours before presentation to Parliament?—That is so.

3127. (*Chairman.*) To go on to No. 12. There is another list as to which the Treasury sanction is required: "The discharge of a loss, deficiency, or over-issue of cash or stores of any kind: General Officers Commanding have lately been given powers under this head up to 1*l.* for cash and 10*l.* for stores, provided there is no proof or presumption of theft or fraud. The Secretary of State for War deals with losses of stores (except in cases of theft or fraud) up to 100*l.*" I understand the General Officer, as regards cash, has a power of writing off, but the Secretary of State for War has no power for writing off anything?—That is so. The Treasury has no objection, if moved by the War Office, to extend the powers which the War Office has to-day. Recently, in connection with Separation Allowances, paymasters in connection with the war have had a great deal of difficulty, and frequently make mistakes. The Treasury, of course, recognises this, and has given the power to the War Office—on the suggestion of the Treasury, and not of the War Office—to write off losses up to (now) 10*l.*

3128. That suggestion came from the Treasury, and not from the War Office?—That is so. If it would interest the Committee, I will explain it. There are lots of these instances. A paymaster is very hard worked. The papers do not reach him in proper form; the paymaster makes a mistake; the War Office say: "We cannot explain each of these things separately to you; we quite agree we did not agree to take on ourselves the responsibility of writing off 2*l.* 13*s.* 4*d.* without explanation in one case, and 9*l.* 2*s.* 5*d.* in another case." We say: "We quite understand the principle which will guide you; we will give you power, and you need not explain to us." We gave the War Office practically what they wanted, but continued the responsibility with them.

3129. (*Sir George Clarke.*) That would be a multiplied 10*l.*, would it not?—10*l.* in any one case.

3130. Then the total written off would be very considerable up to the present time?—I should say it would run to four figures, though I may add, having seen the figures in the past, I am astonished at the comparatively small number of cases where the paymaster has made a blunder.

3131. (*Chairman.*) Without binding yourself to any precise figure, in your opinion there would be no difficulty in empowering General Officers to write off in cash, say, up to 5*l.*?—Certainly not, if the War Office asked us, of course, we could say to the War Office: "In all these cases you will lay down some kind of direction which will apply to all the General Officers, otherwise you may have a different practice in different places"; and sometimes the devolution from the War Office to the General Officers is a very expensive thing. There was a thing which used to cost about 300*l.* a year when the War Office did it, and it costs very considerably more now that it is in the hands of General Officers.

3132. (*Mr. Gibb.*) Does that mean the free travelling to their destinations?—No, letting people off who have enlisted—it not only costs men, but it costs money. As regards the chairman's question, we should say yes to any proposal of a sensible nature such as would make conditions uniform throughout.

3133. (*Chairman.*) Now, as to B. "The granting of an increased price to a contractor under a formal contract;" why should that go to the Treasury? There is a Director of Contracts at the War Office acting under the Financial Secretary, who is a Parliamentary officer. Is there any reason why the Financial Secretary should not be invested with that power?—Regard being had to the suspicion which does as a matter of fact attach to public departments in connection with contracts, I think the War Office would be extremely ill-advised if it was to wish to take to itself, and exercise by its Director of Contracts, the power of granting any variation from a bargain; the War Office ought to be very glad, in its own interests, to come to a department with a good case, and to get an outside impartial department to assume the responsibility.

3134. But that would not be the Director of Contracts, would it?—I think the War Office as a whole should be very indisposed to depart from the specific terms of a formal contract, in view of the suspicion which may extend to any action it might take or have power to take.

3135. What you mean by reference to another department, like the Treasury, and the Treasury coming

in and accepting the responsibility, is that there would be likely to be less suspicion and fewer explanations asked in Parliament?—Yes, and it would be above board.

3136. (*Mr Gibb.*) Do you include in that answer cases where the increase of price is accompanied by an alteration of quality or any other alteration in the article purchased?—I mean any departure from the terms of the black and white bargain.

3137. I could understand it if it were an increase of price without consideration. For example, suppose the contractor had made a mistake in his tender?—Then there should be a new contract in such a case.

3138. But an increase in price which is due to alteration after a contract is placed by a department requiring the store seems on rather a different footing to a mere increase in price, does it not?

(*The Secretary.*) I think that is a case where the department has power to increase the price.

(*Mr. Gibb.*) It says "any increase of price under a formal contract." If it is in cases which are unaccompanied by any other alteration than increase of price, I can understand it.

(*Witness.*) Those are the only ones we should know of at the Treasury, and as regards those, in the interests of the War Office, I should deprecate any departure from the present practice.

3139. Practically, your answer is confined to a mere increase of price unaccompanied by any other alteration, is it not?—Yes.

3140. (*Sir Charles Welby.*) Do not you think the interrelation of the military supply department at the War Office with the Financial Department in regard to contracts is sufficient to secure that above-board feeling which you mentioned?—I have not the slightest doubt, in practice, that it would be all right, but I say, in the interests of the War Office, which is looked at by the people outside as a whole, that the War Office would be ill-advised not to wish to come to the Treasury.

3141. (*Chairman.*) That is to say, the more people you can get to share in the responsibility, the better?—I do not put it in that way quite. There is a unity about it, and a responsibility.

3142. (*Sir Charles Welby.*) A minute signed by a Parliamentary official, or the head of a department of the War Office, is almost as good, is it not—it is on record?—Yes, if it is the practice; but in view of the general suspicion which does attach to public departments, the view I advocate is the one I have expressed.

3143. (*Mr. Gibb.*) Does that mean that if the War Office asked for it, you would see no objection to granting it?—We scrutinise those cases very carefully.

3144. I refer to an alteration of the practice. Supposing the War Office ask for it, what would you say?—If such a case came, I should first say: What would the Admiralty say about it? what would be their feeling? let me get their experience. And I have reason to believe that the Admiralty would not, as a matter of fact, wish for the responsibility in the case of their contracts.

3145. (*Chairman.*) Your answer, of course, would apply not only to B, but to C. and D. in this list, I suppose?—Yes, certainly to C. D. is a thing that the Public Accounts Committee scrutinizes closely. They think that departments do not exact their penalties from contractors so fully as they should, and that fines for delay are not obtained when they should be. Therefore, I think it would be difficult for us to depart even from D.

3146. (*Mr. Gibb.*) What is meant by abandonment of fines for delay in execution of contracts? Does that mean an abandonment of a fine after it has been imposed, or the abandonment of a fine exigible under the contract?—It means the former. We come in only when the claim has been set up, if I may use the technical expression.

3147. (*Sir George Clarke.*) Then you would not know of cases in which fines in default were abandoned?—No, the Audit Office would, and would draw attention to them, and very frequently does. This is a very favourite hunting-ground for the Audit Office for report to the Public Accounts Committee.

3148. (*Chairman.*) As regards E., "Rewards to inventors and royalties," do not the limits appear rather exiguous?—Very.

3149. Has the War Office ever asked for the limits to be increased?—Not to my knowledge.

3150. If the War Office did make such a request, would the Treasury have any difficulty in enlarging the limits?—I think I may say no difficulty.

3151. Now take F., "Gifts of public property to Colonial Governments, public bodies, or individuals." I suppose that is not worked pedantically; I mean, if there was a case of an accident, a fire in the winter or so on, if an officer gave a few greatcoats to people in the snow, there would be no trouble raised?—No; it relates mainly to the provision of equipments, as to whether you should give Lee-Metfords to every man who belongs to a rifle club in a Colony. It opens up a very large field of policy into which the Colonial Office comes.

3152. Practically, the reference to the Treasury in that case means that in the Treasury are centred the views of other departments, like the Colonial Office and Foreign Office?—Yes.

3153. (*Sir George Clarke.*) And you would expect the Colonial Office views given to you in that case, and you would not take the recommendation of a single department?—Not if it affected a Colony or it meant other Colonies being involved; we should ask what it meant in practice; it would come to a Committee, where the representatives of the Departments meet.

3154. (*Chairman.*) Then as to No. 15, the last paragraph, Mr. Marzials writes: "In the above remarks I have not touched particularly on the kind of control which the Treasury exercises over the establishments, and to some extent over the organisation of the War Office,—a control which the Treasury exercises over all public departments." Does that refer to the control involved in settling, for instance, that such a grade of clerks should have such a grade of pay, and so on?—Yes, and the members and scheme of organisation. We have a power under the Order in Council of 1890, whenever we think fit to investigate the organisation of a department, and to see whether its clerical establishment commends itself to the views of the time.

3155. Do you test the adequacy or otherwise of a clerical establishment by the amount of work it has to do?—Yes, and the character of the work, looking at it from the general standpoint of the experience of other departments.

3156. (*Sir Charles Welby.*) With regard to this reference to the control the Treasury exercises over the working of the establishments, that does not refer to the War Office establishment alone, does it, but to the whole establishments of the Army?—Not to the same extent as to the number of clerks to be employed and their grades.

3157. But you keep a control, do you not, over the number of men the Secretary of State maintains in his Army, just as you do over the money expended on the Army?—The Chancellor of the Exchequer does that; that is a matter for the Cabinet; but this question in paragraph 15 is a departmental matter.

3158. (*Chairman.*) My question had reference to what I might call the departmental Treasury?—Quite so.

3159. I take No. 15 as referring to the War Office?—Quite so.

3160. (*Sir Charles Welby.*) There is no doubt the Treasury does consider it part of its functions to see that the numbers of men voted by Parliament are not exceeded?—We are chiefly concerned with that second financial aspect of Vote A., which is Vote 1, Pay. We have a minor interest in the other, but we are concerned in its financial expression, "Vote 1," and to that extent we no doubt do take a very considerable interest in the establishments. For instance, the question of raising a new regiment or a new battalion—such as the British Central African Rifles—is a matter which interests the Treasury to a considerable extent, and to that extent Vote A. (numbers) comes in as well as Vote 1 which is Pay.

3161. It might easily happen, might it not, that a fresh regiment would be placed on the establishment of numbers which would not lead in that particular financial year to any excess on Vote 1?—We should like to know that, because of the liability for future years.

3162. Your authority would be required from that point of view, because eventually it would lead to further expenditure?—Yes, that is so.

*Mr.
R. Chalmers,
C.B.*

4 Feb. 1901.

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

3163. (*Chairman.*) There is one question not referred to in this Memorandum, but which I have seen referred to before other Committees, and to which one or two officers seem to attach importance, and that is the question of the surrender of unexpended balances at the end of the year. There seems to be a theory in some quarters that, as the money which is not expended at the end of the year lapses, it is necessary, in order not to lose the money altogether, to spend it in a great hurry, and possibly uneconomically; but I take it that there is no difficulty, is there, really about unexpended balances, as, for instance, when, owing to a strike or anything of the kind, money has not been able to be spent in the course of the year. Does it not come to this, that if the Chancellor of the Exchequer, for instance, placed at the disposal of the War Office 20,000,000*l.* last year and 20,000,000*l.* next year, and if, owing to a strike last year, the War Office only spent 19,500,000*l.*, the interest which the Chancellor of the Exchequer himself has in the half a million which has not been spent is very slight, and does not help him for his budget of the next year?—No, it goes to the Sinking Fund if unissued from the Exchequer.

3164. Therefore, if any tolerable case was made out explaining that that money was still wanted, and could not have been expended owing to causes over which the War Office had no control, the Chancellor of the Exchequer would have no difficulty in giving an assurance to the War Office, would he, that that money would be placed at their disposal again in the form of a supplementary estimate?—In the same year, or otherwise it lapses.

3165. Is it only towards the end of the year that it may be placed at their disposal by a supplementary estimate?—That is so.

3166. (*Sir Charles Welby.*) And it must be spent by the 31st March, or it is hopelessly gone?—Yes.

3167. (*Chairman.*) But if it is on the point of lapsing on the 31st March, could not the Chancellor of the Exchequer give an assurance that an extra 500,000*l.* would be voted by way of supplementary estimate the next year?—He could if he saw that his revenue was sufficient, and likely to be sufficient, to give him such a margin, but that involves quite separate considerations from the fact that the money has not been spent in the past. Each year is quite separate. In particular, what happens is that the Department sees that it cannot spend, owing to strikes, half a million, say, on ship-building, taking the case of the Admiralty. It is very sorry not to be able to do so. The Treasury is equally sorry because the money has to be voted in another year for it. Then they think they might spend money on stores which will go towards new construction in another year, and they can pay for those stores this year. That has happened. Stores have been bought with money which could not be spent in payments to contractors for new construction, and to that extent it is possible to deal with the difficulty of savings, but not much further.

3168. (*Mr. Beckett.*) If the money were carried to a Suspension Fund, then the Chancellor of the Exchequer would not be under any obligation, would he?—He would not, but that would involve, the Committee will observe, a fundamental departure from the whole scheme of National finance, which is, that every year raises its own revenue, and expends that revenue.

3169. Of course, it might lead to considerable loss in the way you mentioned just now. I mean a public loss; but suppose, owing to strikes, 1,500,000*l.* which was voted for the Navy could not be spent on it, in another year the Chancellor of the Exchequer might find it inconvenient, not to say impossible, to raise that 1,500,000*l.* without imposing fresh taxation, and he might shrink from that?—That is so.

3170. And the consequence is that that money might be lost to the Navy for the time being?—In a case like that he would have to find the money. What could be done in practice in such a case as that would be this. Instead of paying the money over to the new Sinking Fund, Parliament could pass an Act to say that it might be set aside in some way. That is the way in which we have dealt with various public purposes out of the surpluses which there used to be frequently till quite recently. We should have to get an Act to take the money away from the Sinking Fund.

3171. (*Chairman.*) That is a way of preventing the 500,000*l.*, taking the instance I gave, from going into the Sinking Fund and practically carrying it into a

Suspense Account for the next year. The Sinking Fund is not enriched by that 500,000*l.*?—That is so.

3172. And it is carried forward?—To such purposes as Parliament might see fit to devote it to by a new Act.

3173. (*Sir Charles Welby.*) But that is an elaborate business which would only take place, would it not, in the case of a large sum like this 1,500,000*l.*?—It has not taken place even with regard to that.

3174. (*Chairman.*) A general way to get out of it would be, would it not, supposing through an engineers' strike certain classes of work had not been proceeded with, to get authority to buy more stores of another kind for that year and less stores of the first kind for the next year?—Yes, that is so, and that is a method which could be explained, I think, to the House of Commons, and they would understand that as a reasonable way of proceeding. But the Committee will observe this, that if towards the end of the year—say, now—it is found there will be savings, there is no doubt a yearning to spend every penny that can be spent, and it is exactly at a time like this, as the end of March approaches, that real extravagance takes place.

3175. Is that extravagance a necessary part of our general financial system?—I think it is, so far as people will regard savings as being their own money which they must get rid of.

3176. (*Sir Charles Welby.*) It leads to hurried and ill-considered arrangements which are to be completed at any cost by the 31st March?—That is so.

3177. (*Chairman.*) If a man has been hindered by a strike in the early part of the work, and has been doing his work more slowly, but is desirous of completing it, he might do it less economically if he pushed it on rapidly at the end of the year than if he could spread it over a few more months?—Yes, the danger is that it may be felt in February or March. They say: "Here is money, let us buy something"; and I say the taxpayer does not tend to be profited to the full by the expenditure which goes on under those conditions.

3178. (*Mr. Beckett.*) I suppose, in the case of contracts, money is paid before it is due under that arrangement very often?—Not within the knowledge of the Treasury.

3179. (*Chairman.*) But there would be no machinery except the elaborate one you have pointed out, for avoiding that tendency to hurried expenditure at the end of the year, would there?—No.

3180. (*Mr. Gibb.*) Do you mean a general Act of Parliament providing that unexpended balances should remain to the credit of the department for which they were authorised?—That is what the suggestion would amount to.

3181. It would not mean an Act of Parliament dealing with an unexpended balance each year, but a general Act providing for the appropriation of unexpended balances?—I do not quite know whether the Chairman meant a general Act or an Act in a given year when any difficulty occurred. I do not believe that a general Act would be granted by Parliament.

3182. A general Act would be much the simplest way, would it not?—Yes; but I believe Parliament would not contemplate it.

3183. (*Chairman.*) What I meant to convey was that, barring the recourse to this rather cumbrous method of a special Act, there would be no means of avoiding this tendency to expend money at the end of the year, except some general measure which would cut right across our great financial principle, that the money raised in the year must be spent in the year?—Yes, that is so; there is one way, that as regards small things you can have a "grant-in-aid." A "grant-in-aid" has not got to be surrendered as regards any unspent balance at the end of the year; but that is for smaller purposes and does not extend to those great sums which you have in view when speaking about savings on the Estimates of the great spending Departments.

3184. (*Mr. Gibb.*) A special Act every year would have this disadvantage, would it not, that probably it would not be passed when the Treasury was hard up, and it would be just then that the Public Service would suffer most injury.

3185. (*Sir George Clarke.*) I suppose these large loans for works have chiefly arisen from the difficulty of

reproviding money; that forms the whole difficulty, does it not?—It does form the difficulty for those purposes which deal with great capital outlay.

3186. (*Chairman.*) We meet that difficulty, I take it, to a great extent by raising loans for important works, whereas in other countries like Germany, they take a Budget extending over more than one year?—Yes.

3187. (*Sir George Clarke.*) Does the Treasury generally like this system of very large loans?—I doubt where the Treasury would draw the line, say, between the Military Works Loans, 1897 and 1899, and Army Vote 10, which deals with buildings. As regards great things like, for instance, Dover Harbour, to take an Admiralty case, there is no doubt that is a proper thing to be put on a loan; that is in the nature of abnormal capital expenditure, beyond all doubt; but there are other services which tend to be less of a capital nature, and it is very difficult to draw the line.

3188. (*Sir Charles Welby.*) I suppose one great reason why there is a transfer backwards and forwards between Vote 10 and a loan is that the Chancellor of the Exchequer cannot always see his way to grant a sufficiently large loan to enable the War Office to put all its important building services on to the loan, and therefore they are driven back, against their will, to their Vote?—That, no doubt, is true to a certain extent.

3189. (*Chairman.*) I want to ask another question, which does not arise out of the Memorandum, but which would be useful to the Committee, as to the Treasury view. I refer to the Comptroller and Auditor-General. The Comptroller and Auditor-General is, I understand, an officer who is entirely outside the Civil Service?—For practical purposes, yes; his salary is borne on the Consolidated Fund, like that of a judge; he is an officer who is responsible to Parliament; his functions are defined by the Exchequer and Audit Departments Act, 1866.

3190. Generally speaking, he is an officer who is quite outside any ministerial office and authority, and who is responsible only to Parliament and for reporting to Parliament?—That is so; under section 27 of the Act of 1866.

3191. Then it follows from that, does it not, that the Comptroller and Auditor-General occupies a kind of independent and semi-judicial attitude towards the public departments?—That is so.

3192. (*Sir George Clarke.*) Including the Treasury?—Certainly.

3193. (*Chairman.*) Therefore, the Secretary of State for War, or the head of any other spending department, is bound, according to the existing constitution, to satisfy himself through his own officers that he is discharging his responsibility of spending the moneys entrusted to him by Parliament for the objects for which they were voted?—That is so; that is the keystone of the scheme of accounting for public moneys.

3194. Therefore, supposing it was proposed that the Comptroller and Auditor-General should take over the departmental audit, and examine all the War Office accounts, in such a case the Comptroller and Auditor-General would either become the officer of the Secretary of State, which would be a negation of his independent position, or, if he retained his own independence, he would be very apt to intervene in questions of administration?—That is so.

3195. He would become a kind of co-ordinate and co-equal authority with the Secretary of State, and not his ally?—He would be his master, almost. The two functions are wholly distinct. One is that of the trustee accounting for his money who has to say: "These are trust funds, and I have expended them in accordance with my trust deed;" that is one thing, and in practice that means that the Accountant-General here has to be personally responsible for every penny of Army expenditure. To do that he wants an examination on his behalf to justify him in authorising payments and in signing the Appropriation Account. The other is the *ex post facto* test imposed by Parliament on all departments alike—a test imposed by Parliament in the general interest on the account of expenditure rendered by the accounting officer. These two functions are quite distinct things. They may be alike in practice to a certain extent, but the principles are wholly distinct.

3196. (*Sir George Clarke.*) But there is nothing now to prevent the Comptroller and Auditor-General from intervening in what are called matters of administration within limits; it is only a question of degree, is it not?—You will no doubt ask the Comptroller and Auditor-General his views personally; but from what has passed in previous instances, to be found in Public Accounts Committee's Reports, and those of other Committees, he would not interfere as regards policy at all. He would only say as regards a moot question, "Have you got an authority?"

3197. But that is a departure from the fundamental principle for practical convenience, is it not?—Yes, the fundamental principle should always be this, that appropriation precedes the audit,—that is, that Mr. Marzials, an Accountant-General here, should sign a definite account before any audit begins on the matter,—when I say signs before, you will not press me on the question of date—I mean he should first have made the payment, and then submit it to this quasi judicial authority.

3198. (*Chairman.*) I take it, under the existing system, so far as concerns the intervening of the Comptroller and Auditor-General in matters of administration, that he might query the payment by the Secretary of State for War, and the Secretary of State for War might say: "That was made for a good and administrative reason, and I decline to give any further explanation"?—Yes.

3199. And in that case the House of Commons would decide whether the answer of the Secretary of State was sufficient, or whether they cared to press him further?—That is so.

3200. But if the Comptroller and Auditor-General were given the departmental audit of the War Office with his present powers, in that case there would be no reference to the House of Commons; he would simply at the outset stop the Secretary of State making such and such expenditure, although there might be a good administrative reason for it?—Quite so.

3201. He would block him at the beginning?—He would.

3202. (*Mr. Gibb.*) Or he swept away by the Secretary of State?—Would it be useful to the Committee if I were to make this remark? Under the Exchequer and Audit Departments Act, 1866, the War Office accounts are put in a special schedule, called Schedule B. to the Act, and under that Schedule B. there is a distinction between services in general and the services in Schedule B. of the following kind. The Auditor-General need not go into the full details of Schedule B. services, which include the Army. He may, but he need not. That was the position in 1866. Pressed on by, if I remember rightly, a series of four Reports from the Public Accounts Committee, the Treasury at last decided (I think in 1876) to require the Comptroller and Auditor-General to do what under the Act they have power to require them to do, namely, to enter into the examination in some detail of Army and Navy Services included under Schedule B.

3203. By whom pressed?—It was at the instance of the House of Commons that the Treasury required the Audit Office to do what the Audit Office need not have done, namely, enter into some detailed examination of War Office accounts.

3204-5. (*Chairman.*) I will put the question in this way: Have you an authoritative memorandum giving the general views of Treasury control over Army and Navy expenditure?—I have, and if the Committee will allow me, I will read a memorandum, which was drawn up by a distinguished Chancellor of the Exchequer, who, I may remark, had had experience of a spending department before he came to the Treasury: "The first object of the Treasury must be to throw the departments on their defence, and to compel them to give strong reasons for any increased expenditure, and to explain how they have come to have to demand it. This control alone contributes to make the departments careful in what they put forward. There are many other stages at which, clearly, the Treasury is bound to intervene, and many where they must absolutely decline to sanction what is asked. The Chancellor of the Exchequer, who has to find the money, is to know what is going on. He is certainly not a mere Registrar. He must be satisfied of the expediency and urgency of the proposed outlay, but it is going too far to say that he must be convinced that it is really necessary. The purchase of some picture

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

"or a priceless work of art for the nation may not be necessary; but, still, it may be both expedient and urgent. The imperative must have precedence, but there is outlay which the nation requires to which the term imperative can scarcely be applied. I quite admit that someone in a great service must watch over a certain uniformity of pay and regulation, and that this duty falls to the Treasury and the Chancellor of the Exchequer, but this uniformity can never be absolute. It must be a certain uniformity. The salaries in the various Civil departments are not uniform, neither can emoluments always be uniform in the Army and Navy. Differences of circumstances, and sometimes of tradition, must be taken into consideration. I believe that the largest experience would be unequal to the task of laying down precise principles as to the control to be exercised, but I may say that, in my judgment, it should be ubiquitous and unflagging, and, though dealing with details, should not lose a certain large-mindedness. It should have sufficient imagination to appreciate the feelings of those over whom it is exercised. It should not be over-controversial, and yet firm and precise."

3206. (Mr. Gibb.) With regard to Treasury control, about which so much is said, it seems, from the return of Treasury letters given to us, to express itself in 1315 letters in the course of 12 months?—That is so.

3207. In other words, four letters per working day?—Yes.

3208. But that cannot be a very extensive or paralyzing amount of business for the War Office to grapple with, can it?—No, and I understand the Accountant-General at the end of his memorandum to say that is not so.

3209. That being so, it is clear that it cannot be from an objection to the amount of correspondence that any practical complaint exists, but from the paralyzing effect of having a general control by a financial authority?—I am not aware that there is any dissatisfaction as coming from the War Office as a whole—as coming, that is to say, from the responsible Secretary of State.

3210. You think it is more a question of public impression that the Treasury control is harmful than any impression on the part of the War Office, who are subject to the control?—That is my belief. I do not think people outside understand the actual facts of the case to anything like the extent the Committee does.

3211. You have spoken of the Treasury sanctioning money being transferred from Vote to Vote. If I followed you rightly, the necessity for an application for a transfer from Vote to Vote would only arise, would it not, when the one Vote was exhausted?—Yes, that is so.

3212. Do you say that the Treasury control or power in that case is really a control to facilitate business?—No. As between Vote and Vote, it is a function of a temporary character laid on us by every Appropriation Act as regards each year. I think it works out in the direction of ensuring a greater knowledge of how he stands in the mind of the Accountant-General, who is responsible for the Parliamentary funds. He has to be on the look-out to see where he is, and I think it tends to make him constantly review his position; and I go further, and say, if he does that it strengthens his position as regards proposals for diverting Parliamentary moneys to unauthorised purposes.

3213. Parliament having authorised a certain amount to be spent under one Vote, and a certain amount to be spent under another Vote, and one of these Votes having become exhausted, the work would be suspended, would it, unless some authority could deal with the matter provisionally?—Yes, the Appropriation Act prescribes that it must be for purposes the postponement of which would be detrimental to the Public Service. Those are the only reasons which are allowed to guide the Treasury in sanctioning a transfer from one Vote to another, temporarily.

3214. And the Treasury have power to do so?—Yes.

3215. And that is a power which facilitates business, and enables the work to be done in anticipation of the sanction of Parliament?—That is so.

3216. As regards a transfer from subhead to subhead, I understood you to say that you thought that should be stricter than it has been in the case of the

War Office?—I think so, in the interest of the Accountant-General, as the trustee for money—that is the reason.

3217. In the case of the estimate for a subhead, that estimate is prepared, is it not, by the spending department?—Yes, the War Office prepare and present their own Estimates to Parliament.

3218. And in the detail of the work covered by these Estimates, do the Treasury exercise any control, or is it only over the general amount to be authorised?—Before the Estimate is presented, do you mean?

3219. Yes?—Over the general amount. There is an amount of cloth given to the department, and it cuts its coat and waistcoat, and so forth, accordingly.

3220. It is assumed, is it, that the spending department, being responsible for efficiency, make proper proposals in regard to what is to be done, and what is to be spent?—That is so.

3221. That fixes, in the first instance, the subheads, but I do not quite follow; if there is no Treasury control in the case of the original proposals to Parliament to authorise the subheads, what practical object is gained by the Treasury afterwards controlling the transfer from subhead to subhead, if the spending department originally responsible for the proposal thinks the transfer should be made?—I think the position is to be explained in this way. There is an honest programme put before Parliament by the War Office, the spending department; on its way it has got our sanction, but that does not matter here. There is the proposal before Parliament, and on the strength of that, and on the representations in that proposal, and within the minute limitations of that Estimate, Parliament gives them the money they ask for. There has been an honest demand so far, then, and there has been an honest reply by Parliament: "You want the money for those purposes, here is the money for those purposes." Subsequently, for purposes which the War Office in presenting its honest Estimate at the beginning could not then foresee, the War Office wishes to expend money on certain other purposes for which Parliament has not made provision. As a matter, therefore, of honesty and good faith, it is desirable that the War Office should not depart from the broad outlines of the programme on the strength of which it sought and obtained money from Parliament. Parliament has given the department money, and is entitled to assume that the department will spend the money on the purposes for which it was asked, unless for those human reasons of inability to carry out the programme some change is made, in which case Parliament knows the department will have to go to the Treasury, set forth its reasons, and receive that sort of decision which it is hoped Parliament would give, had an application to Parliament itself been possible. It is a case of honesty right through on the part of the department, and that is the reason why I think that an independent authority is necessary in the case of a departure from the Parliamentary bargain.

3222. But the honesty as to the change would not be affected, would it, whether the report of the change were first made, as at present, to the Treasury, or were first made to Parliament at the end of the year, on the responsibility of the War Office?—I think, in practice, there would be a very considerable difference.

3223. In each case there is a change—in each case the spending department, who have the responsibility for the expenditure, think it desirable to make the change?—Yes, that is so.

3224. And the only practical importance of the point is, is it not, whether the necessity of having to go to the Treasury for provisional sanction does unduly check the spending department in carrying out changes which they think are desirable in the Public Service?—I do not think it could, to take your words, "unduly check them." *Ex hypothesi* they are anxious to abide by their own programme; they are trustees bound by a trust deed of their own drafting.

3225. If it does unduly check them, you would admit it would be undesirable, would you not?—Let me put it in this way. Take, for instance, guns. If you turn to the subheads, the items are very large, but in practice there can be nothing detrimental to the Army Service which would flow from the limitation of subheads under Army Vote 9. If anything checks them, I should think it would be Vote 10, which deals with works, as regards which I have intimated the

Treasury would be prepared, if asked, to make concessions. I should like to say that, instead of taking the matter *a priori*, I should like to see any instances of distinct and definite proof of the Treasury control having been harmful. My personal belief is that it has not been harmful in any degree, so far as subheads and Votes are concerned.

3226. Your position is that it is not harmful, but advantageous, unless it does practically check, or injuriously check, the spending departments?—I doubt whether there are instances of the latter.

3227. And you think it cannot be proved that there are many instances in which it has had that effect?—That is my belief.

3228. You said that in cases of urgent work it is desirable the promoting department should have to put its case of urgency in a business-like statement for the information of the sanctioning department?—Yes, that is an obligation, at present, as between Vote and Vote under Act; it is an obligation imposed on the Treasury and War Office by Parliament.

3229. And I suppose, in the case of real urgency, or in a case where the spending authority strongly felt that their recommendations should be followed, the Treasury would not override it or ignore it?—Certainly, the Secretary of State would never stand being overridden by the Departmental Treasury; but if I may assume a difference of opinion between himself and the Chancellor of the Exchequer, the Cabinet would decide.

3230. As regards what you said about the dispensing warrant, you expressed the very strong view that, in the interests of the War Office, the dispensing power should be vested, not in the War Office, but in the Treasury, did you not?—That is my very distinct opinion, trying to put myself in the War Office place. It is no pleasure to us to have to "control" the War Office; we do not want to control them in any sense of control, but to have an agreement with them on general principles combined with publicity; but this is a case where I think the Secretary of State would be weakened in dealing with individual officers if he had the power himself.

3231. What you indicate is, is it not, with regard to the number of applications for dispensation; that the very numbers show that the War Office has not been hampered by refusals on the part of the Treasury in any large number of cases?—I think not.

3232. So that the question cannot be one of mere procedure causing delay or refusal, but one of substance?—Is there any question? I did not know there was a difference about it.

3233. I do not think the memorandum Mr. Marzials handed to the Committee does raise any complaint, but it merely notes that special cases under the dispensing warrant have in each individual case been submitted to the Treasury to report to Parliament?—That is a statement of fact, is it not, not a complaint?

3234. Your evidence upon that is that the existence of the Treasury control protects the Secretary of State for War from pressure as to making grants in excess of warrant?—Yes, that is my belief.

3235. Of course that assumes, does it not, that it is undesirable to make grants in excess of warrant?—That must be so, as a general rule; you must wish to uphold your law, and not to have too many hard cases, otherwise you will get bad law.

3236. As a general rule?—That is so.

3237. But ought you to assume that there will not be always a number of cases which ought to be dealt with outside the warrant?—We assume there will be such cases in agreeing to the existence of the dispensing warrant.

3238. By making them difficult to deal with, you reduce the number of cases, do you not?—That is the tendency—they are sifted before they come forward.

3239. The question is, whether that does not impose undue discouragement?—If such a report reached the Treasury, the Treasury would be prepared to meet the War Office if such were found to be the case.

3240. You have said that you think works under 1,000*l.*, dealt with in Part 1 on the Estimates, might be lumped together?—As to over 1,000*l.*, they might be lumped together to a certain extent as regards the provision for the year.

3241. Then, I understand, that that would put the whole of Part 1 into exactly the same position as Parts 2 and 3?—Not wholly, but as regards the actual year it would tend to assimilate the practice as regards Part 1 to Parts 2 and 3.

3242. I see that in Parts 2 and 3 a total sum is voted for each division without specifying the items of work covered by the amount?—Yes, there would not be the same result as regards Part 1; there the items would be specified, though the total provision for the year under "districts" and the like would be assimilated.

3243. I do not know that I quite follow what saving of trouble would be gained if the items of the work were specified, simply leaving out the items of the figures?—There is this great saving. If a work is to cost in the year, apart from its total cost, 1,000*l.*, the War Office may vary that total and spend, I think it is, 1,100*l.* without coming to us at all. Suppose they spend 1,101*l.*, then they would have to come to us. At the same time, in nearly all these cases the excess is a most honest excess—it is because the work cannot push on quick enough, and whilst there is an excess in one case there is a saving in another, and instead of the War Office having to come to us where they had made each honest excess, they would be allowed to use the savings—equally honestly made—in other directions in the same district.

3244. (*Chairman.*) For the whole group of works?—For the whole group of cognate works in the same district.

3245. (*Mr. Gibb.*) Do not you think it would be desirable to treat Part 1 in exactly the same way as Part 2?—I do not; it is a considerable divergence from the principle upheld by Parliament and its representative Committees for a long term of years, and I do not think it desirable to go any further at present. You will be able to ask the Accountant-General, but in practice I think the War Office will find they have a substantial gain from the instalment I have mentioned, and beyond that I think it undesirable to go. Parliament is the supreme arbiter, and, I think, as a matter of pace, this is quite fast enough.

3246. Given particulars of the works, to lump the figures together?—Exactly, and keep within the "total" Estimate, so that if they make mistakes the fact is brought before Parliament.

3247. Do I understand you think it would be advantageous to extend the same principle to the votes which deal with the pay of the Army, which seem to involve an enormous amount of detail?—Not in the vote itself. You will find there are plenty of appendices, but the vote itself is very small.

3248. I was referring rather to the appendices and to the detailed estimates which are necessary for the preparation of the appendices?—That is a matter inside the War Office to a great extent. If you would be so good as to turn to Vote 1, you will see there a total which is the total of all the subheads; each individual subhead has to be worked up to from the cost of each man in each regiment. In order to be able to state this is the general total of the Vote, the War Office itself must know the numbers and the rates. I have no doubt they must prepare the appendices here.

3249. (*Mr. Gibb.*) That depends on whether you rely upon estimates before expenditure, or upon details of expenditure after it has been incurred, as the best check upon your expenditure, does it not?—Yes. Our system does not involve, for a Civil Servant, any question. Our system is that of loyally carrying out the orders of Parliament. Parliament gives money on detailed Estimates of future expenditure before it is incurred.

3250. Your suggestion is that with regard to dealing with the works in the Estimates, Parliament ought to be satisfied with the enumeration of the works, and a total estimate of the cost?—The total estimate means what that individual work is anticipated to cost over the two or three years it takes. That I do not propose to see merged in any other total. I propose that what the work will cost as a whole should remain, it is only the provision for the year which should be merged.

3251. You propose, do you, that each individual work should have an estimate attached to it, but that the Annual Vote to cover all the works should be for a lump sum?—That is so, within a given station and for cognate works.

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

Mr.
R. Chalmers,
C.B.

4 Feb. 1901.

3252. In the Vote for the pay for the Army, of course, there is no comparative figure like the total estimate for a work?—No.

3253. The pay of the Army is simply what has to be spent on it during the year?—Yes, following mainly on the pay warrant as regards Vote 1.

3254. Would you see any objection to a proposal that the number of men to be brought on the establishment (if that is the correct expression) should be voted without the details, that is to say, the pay should not be brought forward in detail, but a rough estimate based on previous experience be used, relying upon the accountant at the end of the year for the details, and thus get rid of the enormous labour which must be involved in estimating a year beforehand the minute items which are all included in the appendices?—I should not be at all in favour of such a change, and you will be in a position to ask the Accountant-General as to whether, in point of fact, he could have any more convenient way than the way he actually does follow for working up what will come in course of payment; he knows what they will cost to a penny. To come in after the event would be no easier to him, I should imagine, than to come in before the event. The honourable member will observe that it is not a case where you have to make a shot. So many men costs so much; and to calculate this before the event, I imagine, could not be any more difficult than to do it after.

3255. (Sir Charles Welby.) You said you confined yourself to works at one station; did you mean a station or a military district?—I should say a district where there is a General Officer Commanding.

3256. (Sir George Clarke.) I gather that full powers which might be claimed under the Appropriation Act are not all exercised now, and that more might be claimed?—No, we exercise all the powers, roughly speaking, under the Appropriation Act.

3257. I rather gathered that you regard the present system as somewhat illogical and inconsistent, that is to say, it is not quite uniform as regards the Admiralty and War Office, and even the War Office itself can hardly be assignable to any particular principle?—The inconsistency is that the Admiralty does come to us more frequently than the War Office under the same circumstances, and acting under the same minute; there is that inconsistency.

3258. The practice of the two departments is not quite uniform, is it?—That is so, and the question is, what should be the change.

3259. And that in the War Office itself there is no particular reason why certain things should be referred and certain other things should not be referred, and that it has rather grown up by usage?—It is a very old usage, indeed; in fact, it used to be stricter 50 years ago than it was when the Minute of 1870 was laid down which required both the Army and Navy to come to us.

3260. You said, I think, the Treasury brings no criticism to bear on Estimates at all, but that the function of the Treasury comes in afterwards as critic?—As regards the Estimate, it is first made up of separate items, on most of which, if they are of importance, we have been separately and previously consulted, so that the result is rather like the addition of a sum, or ought to be. But when the War Office Estimates reach us, the Treasury goes through them carefully to see anything in them about which we have a difference of opinion, even if the Estimates have been presented to the House.

3261. Would alterations be introduced into the Estimates, according to your instructions, between the time that they were published and the time that Parliament passes them, or could alterations be introduced due to your raising questions between the time of their publication and the time of their being passed by Parliament?—I will answer the letter of your question, first of all, and say: Yes, you could have alterations introduced by submitting a revised estimate, and that has actually been done by the War Office in connection with the Works Estimate in 1900. They submitted a revised estimate, their programme having been considerably altered since the time they first drew it up, and before the Vote was taken in supply.

3262. I think Sir Reginald Welby, before Lord Hartington's Commission, said that it was no part of the duty of the Treasury to interfere with regard to

policy, and I gather from the memorandum which you have read that that is the present view?—That is so as to the departmental Treasury. Of course the head of the Treasury is a member of the Cabinet.

3263. Therefore, the idea which is sometimes advanced that the Treasury is able to cripple the efficiency of the Army or Navy is quite imaginary?—Quite.

3264. When the Treasury gives its opinion as to the advisability of a transfer from one Vote to another, I suppose you would admit that it must be largely a formal function generally, and that they cannot bring any special knowledge on the subject to bear?—We have no special knowledge which we can bring to bear, but we should say to the department: "Could not you have foreseen this?" and if they could not have foreseen it, then it would be explicable in itself, but if they could have foreseen it themselves, we should want to know why they did not come to us beforehand, seeing that they were diverting money from its Parliamentary purpose to another purpose.

3265. The Accountant-General in his Memorandum says that it is an advantage that there should exist an impartial tribunal free from external or internal influences, and, as far as I gather, that is your view?—Yes, that is my view. The Committee may possibly see fit to examine a representative from the Admiralty, but I may say that I believe that to be the view at the Admiralty also.

3266. Is the Treasury less liable to be reached by what Mr. Marzials calls "external influences" than the War Office?—That is a difficult question for me to answer, but my opinion is that there is no possibility of such influences reaching the Treasury.

3267. When you say that the Treasury administers the Superannuation Act, do you mean that the Treasury sanction is required with regard to the payment of pensions which fall due under regulations?—No, I do not mean under regulation. Statutes govern Civil Pensions.

3268. But a great many Civil Pensions are regulated entirely by rule, are they not, and in such cases I suppose the War Office would only have to report as a matter of form to the Treasury when a certain pension had become due, and it would be paid?—No, by statute the Treasury has to award the pension, and the War Office has to state the service has been so and so; that it has been satisfactory, and that the man applying is ill or aged; then we say, "These are the conditions on the strength of which we may grant a pension." In 99 cases out of 100, as I have said, it is a very simple thing. The ordinary Civil Servant goes on serving until he attains the age of 60, he asks for his pension when he has served his 40 years; there is his existing salary, and they give him two-thirds of it; it is all very simple, but still the Treasury by act has to award it.

3269. In such a case, I suppose the award would come from the department in which the person was employed, and the pension would come from the Treasury?—No, the employing department has merely to send to the Treasury a form which is drawn up with all particulars, and it is the Treasury which awards the pension, obeying the Acts which give the power.

3270. I gather you do not consider that the Treasury actually succeeds in effecting economies at the Admiralty and the War Office, but that you regard it as exercising a strong moral restraint upon spending departments?—I agree with the first part of your question, and I hope the second part of the question is true.

3271. (Colonel Miles.) I think you mentioned that greater liberality was exercised now that the power of granting discharges has been delegated to Generals?—Yes.

3272. Do you refer to the purchase of discharges?—Yes, in respect of purchasing discharges.

3273. Might not that be due to some relaxation of the regulations in regard to the purchasing of discharges?—I believe it to be so on the part of the General Officers Commanding.

3274. I mean a relaxation of Queen's Regulations by the War Office?—I should have thought not, but you will be in a position to know that more fully than I do. As a matter of fact, I believe the War Office have sent out a notice to General Officers Commanding that they must now be a little stricter.

3275. (*Sir Charles Welby.*) I have only one or two general questions to put. Is it not the fact that the control, so far as it is control, which the Treasury exercises over the War Office, is, perhaps, somewhat more sympathetic in spirit now than it used to be a few years ago?—I speak from such a very short service myself. I have only been there for a little under two years, but, speaking frankly, I should say that that undoubtedly is so; and I speak with reference to my distinguished predecessor, under whom the existing system in practice really grew up.

3276. You would agree probably, would you not, that a good deal of the prejudice which still exists in the public mind against this bogey, the Treasury control, is the result of the state of things which existed in the past rather than the result of the state of things which exists to-day?—I think that may be taken to be so generally.

3277. You rather deprecated, I understood, the system under which the War Office now makes transfers between subheads without reference to the Treasury?—Yes, I do, especially if it is a case of foreseen expenditure of a novel character.

3278. I think one of your grounds of objection was, was it not, that it was apt to lead to excesses on the Vote?—Yes; it must be so.

3279. As a matter of fact, are you often confronted with excesses on the Votes?—Yes, regularly.

3280. In peace time as well as in war time?—Yes, always; it is part of the system on which the War Office does the working of its finances.

3281. Is there in normal times a supplemental estimate required?—No; there would be an excess on individual Votes, but there would be no excess on the total Army expenditure.

3282. Then there must be a saving on other Votes, I suppose?—Yes.

3283. What I want to know is, is the result of the Treasury control being somewhat relaxed in this particular, that there is no excess of expenditure on Army Votes in general?—That is so.

3284. Therefore, the Public Service in that sense does not suffer, does it?—That is so. I think the Accountant-General ought always to see where he stands and to know what he can do in the future; and that the War Office should not embark on any novel expenditure, for which Parliament has not made provision, without external sanction.

3285. (*Mr. Beckett.*) It seems to me that in the preparation of the Estimates, as a matter of fact, it is the Treasury that rather has to be protected against the spending departments than the spending departments against the Treasury. I understood the spending departments of the War Office printed their Estimates line by line, whereas estimates allowing for any change of policy have to be decided upon by the Government?—They must go on the past no doubt, and also take into account the future.

3286. And the Chancellor of the Exchequer is practically in a position that he has to accept these estimates, is he not?—I cannot speak as to that.

3287. Unless he does as Lord Randolph Churchill did, resign his position. My point is this, that it is only in small matters of expenditure that the Treasury control is effective?—I should think it was bigger than that, though it is very difficult to point to actual definite figures or to actual definite facts to prove it.

3288. Supposing the Estimates of one year corresponded closely with those of another year, the Treasury would not, in such a case, be likely to raise many questions, would they?—Yes, indeed, they would. Take, for instance, the Civil Estimates, over which we keep a stricter control. We should there look back for two or three years and see what extra special things there were put in. Then we should say, "Those special things should cease, and this year the estimate ought to be smaller." The *status quo* is not the measure of what should be, if I may put it in that way; things may have ceased to be wanted and the amount should be smaller.

3289. Do you take each estimate each year on its merits?—As to salaries and the pay of soldiers there

is no question, but there is a question with regard to other services; for instance, you can keep down works—if you have not got much money you do not build so much; and there are other services of that kind which are capable of reduction, and this reduction could be extended.

3290. Then, in the case of inserting in the Army Estimates a service which would cost over 30,000*l.*, you would probably accept it if it were put on the ground of military policy?—Yes, but we should look into a big thing like that with great care. There are very few things involving the big policy of the War Office which we do not carefully inquire into.

3291. May I take it that most of the works under Part I have come under the eyes of the Treasury?—No, they are mostly small things. The general practice is, if it is a big thing they have to explain it.

3292. You say that the Admiralty comes to you more often than the War Office does?—Yes.

3293. They do so, I suppose, because it is their own desire to be protected by your responsibility?—There are the regulations which are applicable to both the War Office and the Admiralty, and I should certainly not be prepared to say that the Admiralty is a worse organised department than the War Office. If there is a disposition to observe rules, then so far as rules have any value at all they can be made useful to both departments—to the spending department and also to the department which has to find the money.

3294. Do you think the Admiralty are tending to conform to the practice of the War Office, or that the War Office are tending to conform to the practice of the Admiralty?—I think, undoubtedly, that the War Office should tend to conform to the practice of the Admiralty.

3295. In their own interest?—Yes.

3296. (*Mr. Gibb.*) In the making of the rules, is the Treasury consent obtained before a rule is adopted?—The General Treasury Minute of 1870 was drawn up by the War Office, the Treasury, and the Admiralty together.

3297. You said that rules ought to be observed, and no doubt they ought, but are the regulations which ought to be observed in practice made by the War Office?—They are rules made by the Treasury in communication with the Admiralty and the War Office.

3298. (*Mr. Beckett.*) And even though in the case of the Admiralty the Treasury Office control seems to be exercised more frequently than in the case of the War Office, there are, as I understand, no complaints from the Admiralty?—If the Committee see fit, of course they will be able to ask the Admiralty as to that.

3299. (*Sir George Clarke.*) You said that one of the advantages of this inter-communication and correspondence between the Treasury and the War Office on some rather small matters was the general publicity which it gave to any transaction?—Yes, that is so.

3300. Would not that publicity be secured by the action of the Comptroller and Auditor-General if his powers were somewhat extended; his reports to the Public Accounts Committee would have the effect of giving publicity as to any matters which come within his cognizance, would they not?—Yes, if you like to have him auditing 100 per cent. of the War Office payments, you would have everything brought up.

3301. (*Mr. Beckett.*) With regard to Section 11 and the Treasury sanction as to the purchase and sale of land, if the limit were increased, say, up to 5,000*l.*, would it make a great difference in the amount of correspondence in cases in which the Treasury sanction was required?—I do not think it would, and the curious point about it is that, by Act of Parliament, the Admiralty cannot sell anything without coming to us. Parliament has imposed much stricter limits upon them.

3302. (*Chairman.*) In the case of the Treasury refusing sanction to a work, I suppose, if the Secretary of State for War cared, he might always bring such a matter up before the Cabinet?—Certainly.

3303. And that would be the final Court of Appeal?—Certainly.

After a short adjournment.

*Mr.
R. Chalmers,
C.B.*
4 Feb. 1901.

Mr. F. T.
Marzials.

4 Feb. 1901.

Mr. FRANK T. MARZIALS examined.

3304. (*Chairman.*) You have been Accountant-General at the War Office since 1898?—That is so.

3305. There has been communicated to you, I believe, a draft suggestion for the redistribution of the examination and audit now performed by the War Office, the suggestion, roughly, being to transfer most of the present examination and audit, with the corresponding staff, to local centres, assuming always that the existing military districts are re-grouped into larger units. Would you kindly favour the Committee with your views on the suggestion?—I do not think the suggestion referred to me was quite so large in its scope as that. The question referred to me was, I think, the question of Dublin; not the question of a general redistribution.

3306. Dublin was taken as a typical instance, or rather, Ireland?—Yes; but the reference to me with regard to Dublin was not a universal scheme; that was scarcely referred to me, I think.

3307. Ireland was referred to as typical of what a universal scheme might be?—Then I will accept it in that way.

3308. Yes, if you please; I daresay you can discuss it on that basis?—As regards Dublin even, it is a little difficult for me to give an opinion, unless I know something more definite with regard to the basis upon which the proposal is made. Is it proposed that the examination made by the Paymasters should be of exactly similar character to what it is at the present moment; or is it proposed that the Paymasters' examination shall be either modified, or shall be regarded practically, from my audit point of view, as of none effect at all, so that I, or my subordinate in Dublin, will have to undertake the whole examination right away from the beginning, instead of applying as at present a partial test audit.

3309. The suggestion is that the Paymasters should be reduced or modified into cashiers, and that the whole of the examination and audit which is now conducted by the Paymasters should be conducted by some one of your department, acting under your authority, who would be transferred to Dublin as the centre of the Irish Command for that purpose?—That again implies some kind of change and modification of the present system: at the present moment the Paymaster takes the bill or account, or whatever it is that is presented to him, and he gives it a certain amount of examination; that is to say, he examines, in the case of a payment, for instance, under a contract, the correspondence of the claim made upon him by the contractor with the original contract made, and he pays on that. We auditors here get, as it were, a semi-audited claim. If the Paymaster were a mere cashier, I think it would be undesirable that the payment should be made without audit. In that case the paymaster would, as it were, be passed over, and the claim itself would have to come to my examiner at the War Office, or in Dublin, to be audited by him before payment.

3310. That is to say he, or somebody else, would see the contractor's demand for payment and the contract?—Pray understand that I am not raising objections in the smallest degree. I am trying to arrive exactly at the scheme you propose, so that I may know how best either to meet it and arrange for it, or state the objections to it.

3311. (*Mr. Gibb.*) Supposing that a claim under the contract was certified by the department concerned with the contract, and that that claim so certified was then paid, and after payment audited by your local representative in Dublin, what would you say to that?—That really is a very difficult question to answer. It is to some extent a practical question. The difficulty for me is to say what number of those claims undergo much alteration or change, in the preliminary audit, anterior to payment, which they receive at the Paymaster's hands, or, in other words, how far it is possible for the Executive Department, either the Engineer or the Store Department, say, to sufficiently pre-audit those claims before payment. When a thing has once been paid, of course, the difficulty of recovery is immense; the anterior difficulty of preventing overcharge before payment is nothing. That is the real trouble.

3312. But, as regards the claim, is not, we will say the Works Department, who certify the claim, in a

better position than either the Paymaster or the Audit Department to settle whether the claim is well justified or not?—They are certainly at least equally qualified with regard to the details and with regard to correspondence with the contract; and certainly as regards anything that is outside the contract, anything that depends on quantities, they are, I admit, in a superior position; their professional knowledge obviously is superior to that of any other body whose examination must be a more or less mechanical examination. That is quite true. On the other hand, they are not an independent body; they are in closer touch with the contractors; one has to depend not always upon the officer, but upon his subordinates and upon men who are in very much closer touch with the contractor, and whose collusion (I hardly like to use the word) would, at any rate, be more possible.

3313. (*Sir George Clarke.*) But would the present system of audit by this body which, as you say, could not examine quantities, check such collusion effectively?—It would perfectly check it as regards anything that was under the contract. As regards anything beyond that, such as quantities, the check is subsequently applied here by the professional body of examiners; I am speaking with regard to works and charges of that kind.

3314. Then could not that specially trained body be represented in the local auditing body, so as to give that local auditing body sufficient knowledge, the knowledge which is now kept here?—That might, no doubt, be so.

3315. There would be no impossibility about it?—There would be no impossibility. That is a question you would have to consider hereafter very carefully. If you add very materially to your local examinations, to your local examining bodies, you would have to consider whether there would not necessarily be some considerable addition to the existing centralised staff.

3316. (*Mr. Beckett.*) Just to make the point clear, I should like to ask you this: the Paymaster before he pays a claim submits it to a certain amount of audit, does he not?—Yes.

3317. Would it not be possible for your local representative to apply his audit to the extent that it is now done by the Paymaster before he pays the claim, and having applied that audit that he should certify it on to the Paymaster that it was correct?—It would be possible, no doubt. In that case my War Office representative would take the place of the Paymaster in the Paymaster's audit. I do not know to what extent you would like to hear one remark that I have to make about that. It is this. The Pay Department, of course, exists ultimately for war purposes. We all of us recognise that it might in peace times be brought to smaller limits; that by a certain re-arrangement of the pay offices and the clerks it would be possible to do the work probably with a smaller number of Paymasters and a smaller staff; but you then have to meet what is, of course, one of the great difficulties that the War Office has to meet at all times, namely, the contingency of an immense increase of work at a particular time. If you grind your staff down to the smallest peace limit, it is inadequate to the larger demands that may be made suddenly upon you. That is absolutely the case at the present moment. The case at the present moment with regard to the Pay Department is that it has been unable to supply the number of men and officers for the work in South Africa—work which, as everybody who comes back says, has been absolutely overwhelming—and at the same time to perform what is really the increased work that has been left upon the Pay Department at home. The Pay Department at home at the present moment has had, not only the same number of men to deal with as in peace time, but it has had an enormous mass of work thrown upon it in the way of paying all the women who get separation allowances; there have been 80,000 or 90,000 women in receipt of allowances, allotments, separation allowances, and remittances from South Africa. Thus while many, most indeed, of the Paymaster's offices at home have been denuded of their best men for South Africa, the work at home has been overwhelming, and the delay in one or two cases in making payments has been very unfortunate.

3318. (*Mr. Gibb.*) That strikes me as rather an argument in favour of the proposal; that the proposal would provide an organisation which would fit the circumstances of war as well as of peace better than

the organisation which now exists, because it would not be so liable to complete disorganisation by withdrawal of officers for other purposes?—In that case you have to meet the other alternative. Supposing you keep the same number of men going, and have a great deal less work during peace time, then you have a number of men demoralised by that which is the worst form of demoralisation, not having enough to do.

3319. (*Sir George Clarke.*) Do you think that, as a matter of principle, the combination of the functions of a cashier and those of principal auditor is sound?—I think it is not an undesirable one with the audit of the War Office behind it.

3320. It being of course impossible that it should be a full and complete audit?—It is a full audit, except with regard to the pay of the men.

3321. (*Chairman.*) But you do not think it is desirable that the auditor should in any way be responsible for issuing the money in respect of which he conducts the audit?—If you ask me, I do not think essentially it is a desirable thing. We have, for practical purposes, recognised the Paymaster's audit as practically sufficient, but if you ask me whether I think it is very desirable that the Paymaster's audit should be accepted as final, and whether I do not think it a superior system that the War Office should audit throughout, I confess that I think a universal audit of the War Office throughout is a superior piece of organisation. In practice, I do not think that what we have accepted, which is the audit by the Paymaster of charges which are made by his sub-accountants, and which come to him in a form in which it is almost impossible that there should be collusion, has, as a matter of practice, broken down, or that there has been a loss upon it; but theoretically I agree with you. I think the old arrangement, under which it was considered the paymaster lay outside the War Office, and that the War Office audit ought to be absolutely complete, not only of those payments which the Paymaster had made himself but of his subordinates' payments, was in principle the more complete arrangement.

3322. Our suggestion is that instead of the absolutely independent audit being conducted here in Pall Mall, it would be conducted by, as it were, small sections of this office, transferred in the case of Dublin to Ireland, and so on?—Several points strike me with regard to that. Unmistakably, to a great extent it could be done. Of course, as we all know, administratively anything can be done; it is a matter of worse and better; you can do anything. But, in the first place, what strikes me about that decentralised War Office is a certain lack of that absolute independence which the War Office here possesses.

3323. Why should it lack that independence, because the Auditor of Dublin would be not responsible to the General Officer Commanding the Forces in Ireland, but responsible to the Accountant-General here?—The Accountant-General would be a long way off, and the General Officer Commanding in Dublin very near; and the auditor would have to get his authority from the Accountant-General here, whom he would not see probably more than once in two or three years, or perhaps it might be somewhat more frequently, and by correspondence, as against communication with a person whom he would be meeting constantly and always. I think it is almost impossible that ultimately the feeling should not be rather local than centralised. No doubt, you have also to reckon with the social influence of the place where a man lives. If you were to make the change to-morrow, the men who went out from here, formed by the traditions of this office, and with the knowledge of our general lines, would be people who would be guided by what we do here; but how long the local office would ultimately maintain that tradition away from here, it is difficult to say.

3324. But in the first place, with regard to correspondence, I do not see that the need would arise for very much correspondence between your representative, say, in Dublin, and yourself, because he would take large delegated powers from you; and with regard to his not keeping up the traditions of the department, it would be in my mind that there should be interchangeability between your representative in Dublin and the office here. Your representative in Dublin might come up here and serve here for a time and bring you, it seems to me, very valuable acquaintance

with local needs; and, on the other hand, the man who went down from here and took his place would go steeped in all the traditions of the Central Office?—No doubt a great deal might be done in that way. I have not, of course, heard your deliberations and do not know exactly what you are working towards, but I confess I do not quite see *prima facie* what the enormous advantage is, or what the relative advantage is, of a localised office as against a central office. I have no prejudices in the matter; I have as open a mind in the matter as it is possible to have; if I understood a little better what is the precise advantage to be secured by a localised War Office as against the Central War Office, I could try to meet you better perhaps.

3325. I think I may say that, amongst other advantages, there would be the theoretical superiority of an audit which was an audit, and was in no way conducted by officers who were also responsible for issuing money, that there would possibly be a saving of time in the saving of correspondence through the audit being conducted locally; that a Command like Ireland would be rendered more self-contained in every way, and that in the event of operations abroad it would be more easy to transfer, let us say, to the base of operations this Dublin Section which had become accustomed to an independent existence than it would be to transfer a section from this office, and so to secure a more immediate audit; for I think we all recognise that an audit which lags considerably behind the expenditure is not likely to be very useful?—As regards actual effective proximity, the representative of the War Office in Dublin would practically be no nearer a payer or payee in Cork or Belfast than we are in London. With regard to those things which are paid at Dublin itself, it is possible to suppose that in his intercourse with the General Officer Commanding, or with the Commanding Royal Engineer, or with the Principal Ordnance Officer, he would come into more immediate personal contact with him over any question of doubt, and be able to see him and get his personal explanation; but that would only apply to the one particular place in which the auditor happened to be. Directly you get out of a radius of 20 miles of that place, his personal intercourse is nil; it is an intercourse by letter, and considering the facilities of postage there is practically no difference between London and Dublin. With regard to transference abroad, in the case of active operations, I suppose that what you have in your mind is not only transference of the Pay Office from Dublin, but a further transference of a War Office auditing section from Ireland. But it is impossible to suppose that Ireland could be left at any time without much the same number of troops as went out. At the present moment there are in England quite as many troops as there are in ordinary times, apart from the war.

3326. Precisely; but you would have a section who had become accustomed to act by itself, and would be independent, and it would be much easier to detach that to any foreign part?—That would be so, no doubt. Assuming that it is desirable to have a War Office audit at the base of operations, you could transfer it bodily; but your trouble would be removed only one degree back because you would have to recreate a new War Office section at the place from which the War Office section had been sent out.

3327. (*Mr. Gibb.*) You said at the base of operations; do you mean at the base of operations, or at the place from which the local audit was transferred to the base?—At both. You would transfer one local audit staff from a place at home, say, Dublin, to abroad, but then you would have to recreate an equivalent staff, and a staff performing more difficult duties, and with less experience than the staff.

3328. I suppose, practically, what you would do would be to send out some and keep some, and the half you sent out would take charge of the new men, and the half that were left at home would take charge of those who were left at home?—Yes, you would doubtless try to meet the difficulty in that way.

3329. (*Sir Charles Welby.*) But that argument would not apply quite so strongly to the case of an Army Corps, say, at Aldershot or at Salisbury Plain, consisting almost entirely of Regulars, which would be transferred *en bloc* to the seat of war, would it?—Salisbury Plain, as a permanent camp, is not yet, of course, in existence, but Aldershot has been kept full of troops. You have a force at Aldershot close upon what you

Mr. F. T.
Marzials.

4 Feb. 1901.

Mr. F. T. Marzials.

4 Feb. 1901.

have in ordinary times at the present moment; and what I want to emphasize is, that it is a force consisting of men merely temporarily brought together and not in habitual existence like a force of regulars, and consequently requiring greater charge and greater care.

3330. (*Chairman.*) That would all be part of the additional trouble and expenditure which is always consequent upon military operations?—That is so, no doubt.

3331. (*Mr. Beckett.*) I take it that the Army Corps would not be transferred bodily from Dublin, but only a part of it?—That is, of course, in the future; that is part of the Army organisation of the future, which is not settled yet.

3332. (*Chairman.*) But to come back to Ireland again, I have not got it quite clear in my mind what you meant by a sort of pre-audit of the contract; do you mean that a department, let us say the Department of Works, would make a contract for a building, and the contractor would send in his bill, which would be certified by the department dealing with works as having been incurred, and then at the present time the quantities and so on in the contractor's bill are tested up here afterwards?—Yes.

3333. That is a kind of professional audit?—That is so.

3334. Then the vouchers for the payments are all audited in the ordinary way?—Yes.

3335. Having worked out that the quantities in the contractor's bill are all right according to the contract, then the audit consists in seeing that the money has been duly paid to the contractor, and that he gives a proper receipt for it?—Perhaps I had better explain what occurs with regard to a bill of that kind. A bill of that kind comes to this office. It is "computed," that is, everything that is mere calculation is checked, and then it goes to our professional surveyors, who give it a professional audit with regard to the quantities and that kind of thing, and then it is compared with the contract to see that the prices are in accordance with the contract, and then we pay it.

3336. (*Mr. Gibb.*) By whom is the last comparison made?—The last comparison is made by the Account Branch. The professional audit is simply an audit as regards quantities and that kind of thing.

3337. It is not made by the Contracts Branch?—No, the Contracts Branch does not touch the bill at any stage; they are supposed to have made the contract as an independent thing, and then it is for us to see whether the payments agree with the contract as made. It is the Account Branch which sees to the correspondence of contract and bill.

3338. (*Chairman.*) Does this take place with regard to contracts under 100*l.* or in regard to contracts over 100*l.*?—It takes place with regard to contracts over 100*l.* which are paid here. With regard to contracts under 100*l.*, the same process is gone through in the districts; the paymasters perform really what we perform here, but the bill is examined here afterwards; it is paid and comes into the account, and then the process of seeing about the quantities by the professional men is done after payment, instead of before payment as in the 100*l.* case.

3339. Then, in the case of works, it would be the smaller contracts that are dealt with now by the paymasters and they would be dealt with by a local auditor who would take over the Paymasters' functions?—That is a question which will have to be considered: whether the War Office itself having been decentralised, the old limit of 100*l.* and over 100*l.* should be retained; whether the War Office here as the central body would still pay bills over 100*l.*, although they had a delegated War Office in Dublin.

3340. There is a convenience in the War Office dealing with large sums?—There is no doubt. There is a financial convenience which you will understand immediately. We know as we pay from week to week what money we are issuing, and the information is of great importance. We can, of course, only spend the funds that Parliament has allotted to us. If those funds run out, we have to go to Parliament again for more. That was really the explanation of the early Session of Parliament in December, that our funds were likely to run out before the 31st March.

3341. (*Mr. Gibb.*) But is the act of payment and the act of audit of in the same department now at the War Office?—The audit is made by one branch and they pass the bill to the paying branch, who issue the cheques.

3342. (*Chairman.*) But both those branches are under you?—Yes.

3343. (*Mr. Gibb.*) Then has your audit branch to send to your paying branch for information?—No, I get it from my paying branch. They can tell me day by day what bills are being issued.

3344. I do not follow what the difference would be then, assuming there were a local audit and a local paying branch. At the present time, your audit branch has to send to your paying branch for the information. If the change were made, the local audit branch would have to send to the local paying branch for the information, in both cases the information being sought in a branch outside?—No, we want to know at the central office how money is going. But I am prepared to meet you as regards that. The difficulty might, no doubt, be met by these various small local War Offices sending us weekly or daily, if necessary, returns of how their bills were going, and the bills could be tabulated in this Office. The thing could be managed without question. There would be a certain amount of clerical correspondence, but the difficulty is not insuperable.

3345. (*Mr. Beckett.*) It is a very simple thing for a branch to send up a slip of paper to the head office with the sum that is issued that day written upon it?—Yes.

3346. That is done in business continually without any difficulty?—Yes; of course you would have very many returns from whatever number of small offices there were in the country. They would send up their statements weekly, or daily, classified to a certain extent. That might even be done, of course, here. I may add that it has not been hitherto considered a desirable thing to leave very large sums of money with the paymasters.

3347. But, surely, under that local system you would still pay bills for large amounts; the local auditor might forward them direct to the War Office?—Yes, that could be done.

3348. Your audit office now forwards direct to the Paymaster?—The auditing branch now forwards direct to the paying branch.

3349. And the local office might do the same?—That might mean a delay of three or four days in the post.

3350. (*Sir George Clarke.*) Decentralised audit does not mean necessarily decentralised disbursements?—No, not necessarily.

3351. (*Chairman.*) It might still be a convenience for large sums to be paid here?—Yes.

3352. The limit might be raised above 100*l.*?—Yes, that is not an essential part of the question; it is a question on either hand that you can meet by a small amount of official manipulation.

3353. Then you still would know where you were at the War Office?—Yes.

3354. And as regards the ordinary payments made by the Paymaster, which he does now by issuing imprests to sub-accountants, that might still go on as it is?—Absolutely.

3355. Only the accounts as between himself and the Sub-Accountant would be audited by the local audit?—That, I understand, to be your suggested arrangement—there is no trouble about that.

3356. The Paymaster would be relieved of any responsibility that he now has for that audit?—Yes; his responsibility would be limited to seeing that he was not making excessive issues, issues beyond those substantially required, but the final audit of disbursements made would rest with the local War Office and not with the Paymaster.

3357. And might that audit of the local War Office be accepted as final?—There you ask me rather a difficult question. I do not know whether you have seen the memorandum that I put in about my personal responsibility as Accounting Officer.

(*The Secretary.*) No, it has not been handed in to the Committee.

(*Witness.*) I occupy rather a peculiar position in the Civil Service in common with the accounting officer

of all public departments. I am supposed to exercise a sort of check over all expenditure; it would be my duty to solemnly protest in writing against any payment that was being made either against the law or against Treasury decision, and, therefore, my responsibilities are somewhat great; but, looking at the matter fully, I do not see why I should not accept the audit of my subordinates decentralised as well as of those in this office. Of course here, theoretically, I am supposed to audit the General Account that I sign which is presented to Parliament, but obviously, in view of the millions that it comes to, any personal detailed audit on my part is quite impossible.

3358. It is impossible as it is now?—I have, of course, to delegate the audit of innumerable accounts which do not come to me personally. If there was any question of doubt, I should be probably referred to on any question of large amount; and assuming that the local War Office was doing its duty, as one hopes it would, and that they had a general educated knowledge of what were the questions on which it would be imperative for them to refer to me, I do not know why I should not accept the audit of a clerk in Dublin just as much as I do the audit of a clerk in Cleveland House close here. In neither case is it possible for me obviously to have audited the account myself.

3359. Yes, I cannot see myself any difference between accepting the responsibility for your subordinate in Cleveland House and accepting the responsibility for your subordinate at Dublin.

3360. (*Sir Charles Welby.*) You could equally remove them if the results were unsatisfactory, whether in Dublin or at Cleveland House?—Yes.

3361. (*Chairman.*) Your local representative in Dublin would work under powers delegated from you, and would refer to you on any question of importance for your guidance and your instructions, as your subordinate now in the next room does?—That should be so, no doubt.

3362. Why I asked you whether any further audit would be necessary here, was because I wanted to know whether some small reduced test audit would be considered necessary, as enabling the Accountant-General and his staff to give more practical advice on financial questions as to the bearings and issues of certain measures?—I am glad you have asked me that question, because I think myself that that is a matter of very great importance. In all these administrative matters it is very important that the department should know not only what it has sanctioned, but also how the payments it is making work practically; and also the charges that appear in the accounts of an unusual kind or suggesting any change should immediately be brought to notice. I think really there is no more valuable education to the administrative branches than a knowledge of how the thing is working through the accounts.

3363. But if you had interchangeability between the local centres and the Central Office, you would have a great deal of practical knowledge in that way?—No doubt, and I suppose that under your scheme you would allow, for instance, a certain amount of centralised audit and examination in the War Office itself; or would you propose that in the case of London payments, what are called the Home district payments, there should be a separate body, apart from the War Office itself, to conduct this, just as there was a separate body in Dublin, or would you propose to allot such audit to the War Office?

3364. I think we can leave the Home district alone for the moment?—Why I was asking the question was this: If you allot the audit of the Home district accounts to the War Office, of course the central War Office would get a certain amount of information from the accounts that it had itself to audit.

3365. I see. Then again you might also, for the purposes of supervising, as it were, these local detachments of the War Office, possibly keep a small staff who would pay surprise visits and report to you?—That, no doubt, would be desirable.

3366. You think that would be desirable?—No doubt it would be desirable.

3367. But if you had such inspectors, then you could practically accept the local audit in Dublin as final, bearing in mind of course that there is always the review afterwards of the Comptroller and Auditor-General, and that you have to look to your particular

responsibility as Accountant-General under the Secretary of State?—Like all men, of course, I naturally prefer that the person who is responsible to me should be close under my hand, so that I can speak to him and see what he is doing and consult with him; that there should not be the trouble of an official letter to me when there is any question of doubt, but that he should come to my room and discuss the matter. I naturally prefer that arrangement to an arrangement by correspondence, which we all know is not the same thing. But apart from that, speaking frankly, I do not see why, if there were a local War Office, with a fair amount of supervision from the central body, with liability to change from station to station, and as you say some inspection, I should not freely accept that audit as sufficient for my purposes. You will, of course, understand that in any arrangement that might be made of that kind I should have to get the Treasury sanction to cover me.

3368. In accepting such a change?—In accepting such a position I should have to fully explain the circumstances to the Treasury and say, "I propose to take this audit as final, and you must be satisfied that my position is safeguarded in the matter."

3369. Yes, I think there is no difficulty about that.

(*Sir George Clarke.*) Do you not think there would be a certain amount of advantage in this decentralisation from the point of view that the auditors in the districts would be brought into close contact with the actual working of the financial regulations in the Army at its work?

(*Witness.*) I confess I do not see much advantage of the kind, and I will tell you why. As I said before, the accounts staff at the headquarters of the Dublin district would only be immediately concerned, and in actual touch, with such troops as happened to be in Dublin, just as we are only immediately in actual touch with such troops as happen to be in London. When you once get, as I said before, beyond 20 miles from any particular station, your personal touch is no more than the personal touch of London.

3370. There is a sort of general feeling, I think, in the Army that sometimes the practical working of what are called financial regulations is bad, because the people who make them are not quite in sufficient touch with the Army. Do you think that that sort of idea would be knocked on the head if the touch were established with the districts?—There might be some kind of sentimental feeling of the sort very possibly.

3371. And might not the knowledge that would be brought into the War Office by the decentralised auditors when they come up for a tour of service here be of some service to the War Office?—I do not myself see that the local auditing body would be in much closer touch with the troops than the central War Office in London is. That is where I do not quite see where the advantage comes in.

3372. (*Sir Charles Welby.*) But with the Military staff in the district they would be in closer touch?—We are in very close touch here with the Headquarters Staff, and not only with the Headquarters Staff, but with the Home district.

3373. (*Mr. Gibb.*) Is not the real answer to Sir George Clarke's question that it would depend largely upon the conduct and administration of the local auditors?—There is a great deal of the personal equation in all these matters.

3374. If the audit was a sympathetic one, the district officers might like it better; if it was a more unsympathetic one than that of the War Office, they would not like it so well?—That is about it. As regards the sympathy of the thing, I think that the local audit would be scarcely really as sympathetic as the central audit. Naturally, for such administration they would have to be bound by somewhat more stringent rules than the people at Headquarters. I think we here at Headquarters feel a certain amount of latitude and a certain amount of sympathy that it is difficult to formulate and delegate in words.

3375. The higher the officer, the more responsibility he is prepared to take?—Yes, the higher the officer the more responsibility he is prepared to take and to assume.

3376. (*Sir George Clarke.*) Letters sometimes pass from the War Office to districts on small financial matters which certainly, in the past at least, have had a certain amount of irritating tendency?—That is so, without question.

Mr. F. T. Marzials.

4 Feb. 1901.

Mr. F. T.
Marzials.

4 Feb. 1901.

3377. Would not that kind of correspondence perhaps pass away if the people addressed could go in and talk over the matter with the local auditor. Words so often are very different when they are spoken from what they seem when they are written?—That is so, no doubt.

3378. (*Colonel Miles.*) Would it not tend rather to throw the correspondence between those people who are in close touch, namely, the local auditor and the district staff, instead of, as now, between the representative of the Military Staff, who cannot have quite the same knowledge of the circumstances, and your branch in the War Office. Take the case of travelling expenses; take the question of pay that arises and so on; such questions now come up here through the military and across to you in this house, whereas it would be settled locally with a full knowledge of the local circumstances?—That would be so, no doubt, in a great many cases. When you say with a full knowledge of the local circumstances, I come again to my old point. Even the officer at Headquarters is not always dealing with the thing personally under his hand; he is often dealing for instance with a claim for travelling expenses of an officer in some part of a district whom he neither sees, nor can see.

3379. But he gets a much greater knowledge of the local circumstances, say, in Ireland, than he would here?—Certainly.

3380. (*Chairman.*) Are you consulted in a friendly and informal way by officers as to whether any action which they may contemplate would or would not conflict with rules?—Hourly. Colonel Miles knows that very well.

3381. Then, would it not be an advantage if the Staff, say, in Ireland, could consult the local auditor and get his useful and sympathetic advice there as they would here?—No doubt.

3382. That would rather oil the wheels of the machine and prevent possible references and correspondence up here?—No doubt. In looking at the question all round, you have, of course, to consider further that my subordinate officer must have a certain amount of correspondence with me in that case, which at the present moment does not exist.

3383. Yes, he would have to have some correspondence with you, but not necessarily very much?—On either side, no doubt, we should try to minimize it as much as possible.

3384. If you gave him full delegated authority, he would only correspond when the question went outside the four corners of that delegated authority?—No doubt.

3385. (*Sir George Clarke.*) And that correspondence between you and your subordinate could never be of a controversial nature?—I do not know that; I am not prepared to go as far as that.

3386. (*Chairman.*) Admitting that it might be of a controversial character, it would, at any rate, never create any friction between what we may call the Military side and the Civil side?—No. I wonder if I might make a remark on that point. There is a certain feeling about, I think (perhaps in the Press), to the effect that this is a place in which there is constant antagonism going on between the Military and the Civil elements. I can only say that I think that that is an immensely exaggerated view; as regards my own branch, I am quite sure of it. You asked me just now whether there was not frequent personal intercourse. There is the most frequent personal intercourse, and intercourse always, I may say, of the most absolutely kindly and friendly nature, in which, where we differ at all, I am quite sure the Military recognise that we only differ from seeing, perhaps, another side of the question than their own, and that we are anxious to do things certainly not from class feeling as between Military and Civil, but simply both of us on either side trying to do the State service. This is a matter on which I feel rather strongly, and I hope you will allow me to express myself to that effect.

3387. We are very glad to hear what you say.

(*Sir Charles Welby.*) And as regards the Districts, because of that want of touch, there is not that same confidence and feeling of mutual affection between the district staffs and the Civil side of the War Office as there is between the different sides of the Head Office.

(*Witness.*) I think, very often, they may put down to the Civil side, decisions for which the Military side is equally responsible.

3388. (*Chairman.*) Assuming that the suggestion were carried out that the audit work that they now do is taken from the Paymasters and given to a local War Office Audit Branch would it, or would it not, be possible to reduce the number of Paymasters?—I think there is no question that it would be possible to reduce the number of Paymasters, even without such an alteration as you propose; I think that if you concentrated the Paymasters more and left them less in various parts of the Kingdom—if you concentrated, for instance, a larger number in Dublin, making Dublin a larger centre, and in Belfast, perhaps, and Cork, and did away with other pay offices—you might reduce the number of Paymasters even apart from any suggestion such as you are making at the present moment. But then, I go back strongly to my original point; you are utilising these Paymasters now at certain places for certain purposes, and you have not got one single man more than you require in war. Although, therefore, I think you might reduce the number of Paymasters, even without the change you are contemplating, and with the change that you are contemplating, you might, I think, even further reduce the number; yet, if you came to a war time you would, I think, greatly regret having made the reduction.

3389. But the point I want to get at is this: Having regard to the exigencies of war and the necessity of always keeping a certain larger number of Paymasters than is strictly necessary, bearing that in mind, would this suggestion make for a reduction in the number of Paymasters in itself?—Certainly. If you take away from the Paymaster the work of examination of a large portion of the payments that he makes, and throw that back upon another body, you most distinctly then can reduce the number of Paymasters; but I am not prepared at the present moment to speak without further details as to what ought to be the strength of your disseminated War Office.

3390. No; it is conceivable that if, for instance, you take away the whole of the audit from the Paymasters and put it on the War Office, which now only does a test audit, you might want to strengthen your War Office Audit Branch?—It is not even quite that; you have, of course, also to recognise this: Supposing that you got a certain number of small War Offices at each of these stations, you have to consider what class of man you have to put in command of each. You cannot place a clerk there whose position is not adequate. At the present moment, for instance, in my branch here, the establishment of each recognised sub-division is a Higher Division Clerk for principal, a second Higher Division Clerk for assistant principal, and then there are a certain number of Staff Clerks of the Second Division and Second Division Clerks. You could scarcely put a Second Division Clerk in charge of an office in Dublin, for instance; if he is to hold his own, he must be a man who has been in a position of considerable independence here; if he is to hold his own against the General Officer Commanding in Ireland, and the local staff generally, he must be a man of some standing.

3391. Yes, you must have Higher Division Clerks?—That means that you must have at these various stations a staff more highly paid and of a superior kind to that with which it is possible to work when you have all the office in one place.

3392. That would rather depend upon the number of these stations, the number of units that there are?—That is so. It would require a re-arrangement of the Staff and an addition.

3393. (*Mr. Gibb.*) But as regards the reducing of the number of Paymasters so as to deplete the necessary supply in war time, you have to consider that by simplifying their duties you make it more easy to get a temporary expansion of the Paymasters during war?—I do not very well see how during war time you could carry on the organisation of purely cashier Paymasters and of a local War Office examination at the same time. It would require a very large office at the present moment for a War Office at the Cape, and rather a costly one, I fear.

3394. (*Sir Charles Welby.*) Was it not strongly urged at one time that a local War Office should be sent to the Cape for this purpose?—It was proposed that a certain

number of clerks should be sent out to advise financially.

3395. (*Chairman.*) That means to advise as to the interpretation of rules, does it not?—It is much more than interpretation of rules in South Africa at the present moment.

3396. (*Mr. Gibb.*) My question was not so much on the audit part, but distinctly on the point of getting Paymasters to do the necessary cashier work in war time?—Certainly. If you had a staff of Paymasters out at the Cape whose duty it was simply to disburse money without seeing that accounts were rendered for that money, which is an immense work at the present moment, unquestionably you would require fewer Paymasters, and their work would be much simplified. The enormous amount of labour at the Cape at the present moment is due to the fact that so many officers are imprest accountants. Any man who goes out in any direction to buy cattle or to buy food or to engage labour is a man with a large imprest account, which he has to clear by sending vouchers and receipts, often under terrible difficulties.

3397. (*Chairman.*) That means to say, does it not, that during war necessity forces you to turn a great many war officers into purchasing or paying officers of one kind or another?—Yes.

3398. You cannot get over that?—No, that you never can get over.

3399. If you send men out to buy cattle, it is a necessity of the moment?—Yes.

3400. (*Sir George Clarke.*) Then I suppose you would keep the number of Paymasters, under your scheme, pretty much in proportion to the number of troops; that is to say, going back to the Regimental Paymaster System, that there should be a certain number of paymasters in proportion to the number of the troops, instead of the Centralised Staff System?—I do not think it is altogether a centralised Staff system now. They have Paymasters on the Lines of Communication.

3401. In war?—Yes.

3402. But not in peace?—No.

3403. In peace time you would come back to the system by which a Paymaster existed for a certain number of men?—Yes, I suppose so. He would be a sort of centralised cashier wherever a cashier was most needed. The Regimental Paymaster used to very laboriously make up the regimental account. As you know, the Regimental Paymaster issued the money to all the Captains of Companies. The Captains of Companies rendered an account to him, and that account he took and very laboriously dissected and embodied in an account of his own.

3404. But the point is, if the Paymasters were made cashiers and a sufficient number were maintained in peace time to do cashier's work only, would that number have to be largely augmented in war time to do cashier's work only?—Unquestionably it would.

3405. (*Chairman.*) May we take it that this is correct, that the simpler you make any duties—say those of a Paymaster—the more easy it is in time of pressure to take on men to perform those duties who had not previously had experience?—Certainly, so long as you do not throw that amount of increased duty upon the second line of defence (which you would have to do). That work has to be done whether you do it by War Office officials or by a certain number of Paymasters. In either case you have to produce a body *ad hoc*; you do not get rid of the work, you simply throw it back on someone else.

3406. No, you do not get rid of the work; but if the work is of a very scientific and technical nature, and that work is likely to be expanded at any moment, you must keep a considerable body of scientific and trained men to discharge it; whereas if the work is of a very simple character, so that any educated man can discharge it, you can very much more readily expand your establishment in time of pressure?—I admit that entirely; but you have to recognise that that same work does not cease to exist. You have to put it back to your War Office examiner, and your War Office examiner (whom during war time you would have to multiply in the same way) and the staff would have to be increased. It is not that you get rid of the work.

3407. No, according to that it is conceivable that in time of war you might have to expand your audit staff

just as in time of war you have to expand expenditure in all directions?—Yes.

3408. (*Sir George Clarke.*) I suppose the rank and file of the decentralised War Office would be largely composed of smart boys who would be got locally and would not be on the establishment?—I think all the boys are on the establishment, but only for a time; they have to go at 19, or something like that. Of course, you understand that that is not the class of labour that you could employ in any case as heads of offices.

3409. Absolutely no; but the rank and file would contain a good many of them?—Yes.

3410. And the expansions that you would have to make in war would be more in taking on a great many more of that sort of lad?—I do not think you would take that sort of lad on for a foreign expedition. I do not think they have the health or the physique for it. I do not think it would be a desirable thing to do. I think, in war time, you would have, so far as you possibly could, to trust to such men as you had got, making them the first line to go out, and add to them as much as you could.

3411. Is there at the War Office any distinct line drawn between the Audit Branch and the General Finance Branch or the Accounting Branch; is there a distinct body in the Audit Branch at the War Office which goes into that body, is trained in that body, and is promoted in it?—No.

3412. There is no distinct audit body educated in it as such?—No. Of course, there are some sub-divisions which are more distinctly concerned with audit than others, and in those sub-divisions the Second Division Clerks are not very often changed; they mostly remain in the sub-division for a long time and so acquire a great knowledge of that particular class of work. But there is no rule which would prevent my moving a man out of an audit room into any other room, nor does promotion go in that way.

3413. So that a man's duties vary very much from time to time during his service?—Yes; as regard the Higher Division Clerks it is constantly so; we try to give them the greatest experience we can.

3414. (*Chairman.*) In fact the audit at the War Office does not mean what is generally meant by audit, it is that and something more, viz., an examination to see if the expenditure is according to regulations, and very complicated regulations, and the more a man moves about the department, and the more he gets to know the regulations, the more generally handy he would become?—Certainly.

3415. (*Sir George Clarke.*) Do you think that any general simplification of the regulations is possible?—I think it is the desideratum of all our lives.

3416. Is the task hopeless? Could they be codified and simplified without financial loss?—I think in certain respects some simplification is possible. But if you ask me whether any simplification is possible I can scarcely answer yes, without eliciting the reply, "Well then, why have you not simplified?"

3417. I promise not to do that?—It is, I think, more difficult than almost anybody can say who has not had any dealing with the matter, in detail. You have to deal with bodies of men in the Service, officers of 40 and 50 and 60 years' service, you have to deal with soldiers who have been in the service 21 years and more; and, therefore, you can perhaps understand how difficult it is to make any new arrangement that shall not at some point or another touch some vested right, and directly you do that you have to respect your vested right and a certain amount of complication is inevitable. But nobody can be more keen than I am to try and get more simplification. There are one or two points on which I am not hopeless.

3418. (*Chairman.*) But, for instance, have the proposals, so far as they have been carried out, of the recent Decentralisation Committee tended to a simplification or reduction of regulations?—I do not think they have very materially tended to simplification, so far as I can judge.

3419. They would, I suppose, tend in that direction?—I have not the slightest objection to decentralisation, in fact I think we all court it so far as we can; but I do not think there has been very much real simplification of regulations from it.

Mr. F. T. Marzials.

4 Feb. 1901.

Mr. F. T.
Marshall.

4 Feb. 1901.

3420. (*Mr. Gibb.*) Do you think that regulation is carried too far and made too much a substitute for discretion?—I do not think it is. You have to remember that you are dealing with an exceedingly peculiar class of labour in the British soldier. If you give a certain latitude you will be dealing differently with a man in Ireland and with a man at Aldershot and with a man at Shorncliffe, and those men do not always remain there, they interchange, and a man says, "I got this at such and such a place, why do I not get it here?"

3421. Of course simplification of regulation may have two meanings; it may mean "express your regulation more clearly," or it may mean "do not regulate so much"?—Yes.

3422. (*Chairman.*) On the last point, "do not regulate so much," though it may sound a paradox, is it not probably true that the better a public department, and the more completely and thoroughly it does its work, the more inclined it is to make more regulations to provide for every possible contingency?—Yes, there may be a tendency of that kind.

3423. I have known a case in another department of a high official who was specially deputed to simplify and purge some regulations, and he found out in the course of his task that there were a considerable number of regulations which had been established as a consequence of some single particular incident; that is to say, some single particular incident had occurred and the department said, "Very well, we must complete our code of regulations; we cannot have this left an open question," and then the regulation was established. Time had elapsed and circumstances had changed, and there was no human possibility of such an incident ever again arising; but the regulation remained?—It is quite possible.

3424. (*Sir Charles Welby.*) But you are now, are you not, perpetually carrying on, so far as you can, the process of simplification of regulations?—We are trying. I am only too ready to assure the Committee that, so far as regards the simplification of regulations, we are very keenly alive to the desirability of doing it.

3425. (*Chairman.*) Practically speaking, I suppose, your time is so much occupied in administering the regulations as they are, that you have not sufficient leisure to simplify them?—Very often.

3426. Now assuming that the rather anomalous position of the Audit conducted by the Paymasters suggests the necessity of a remedy, there would, of course, be another alternative to decentralisation, and that would be this: while reducing the Paymasters, as before, to the position of simple cashiers, to centralise all Audit at the War Office. What do you think of that? That does not appeal to you?—No. That could be done, no doubt. As regards the alternative of that or a decentralised Audit at the stations, it is difficult to say either way. It would mean a very overgrown department here, I think. It could be done, of course.

3427. Yes, of course, everything can be done; but would there be any practical advantages in the way of efficiency or economy or anything else in such a suggestion? There do not seem to me to be any of the advantages that there would be as far as regards decentralisation which we have already enumerated?—There would be the practical advantage that you can always get from any centralisation, viz., one unique direction, acting on the same lines, with regard to various classes of things, in exactly the same way.

3428. (*Sir George Clarke.*) It would mean an appalling amount of correspondence, would it not?—Yes, it would. You would concentrate in this one office an amount of correspondence which is now disseminated through all the Paymasters' offices all over the Kingdom.

3429. (*Mr. Gibb.*) Are you, in that answer, ignoring what you said before: that it is just as easy to write to London from a local station in Ireland, as it is to write to Dublin?—I do not think the correspondence is so much my difficulty, as the immense concentration. You would not only be doing what the War Office is doing now, but you would be doing what is being done by the various pay offices all over the Kingdom. It is an immense concentration. If you really want my opinion about it, as the matter has not been presented to me before, I would rather think about it and let you know later on. I hesitate to give an immediate opinion about it.

3430. (*Chairman.*) Yes, if you would think it over, you might give us your opinion about it; but the first impression that is produced upon you is that it would lead to a very great deal of correspondence and a very overgrown staff here?—Yes.

3431. (*Sir Charles Welby.*) It would not involve sending up more documents in actual bulk than at the present time. Does not the Paymaster practically forward the whole of the accounts?—No, in actual bulk of accounts and documents, I do not think there would be much more sent up here than at the present moment.

3432. (*Chairman.*) But there would be more correspondence?—It would be so inevitably. The Paymaster at the present moment gets an account from the Captain of a Company; he examines that account; and, if there is anything wrong in it, or he objects to any of the charges, he sends his communication straight back to the Captain; the Captain sends a reply back to him, and he corrects the account before it is sent to us. All that correspondence would have to be carried on by every Captain of a Company throughout the Kingdom with this office.

3433. And at Foreign stations?—I do not know how far you would bring Foreign stations in. In all the answers that I have been giving, I have been referring to Home stations. The question of Foreign stations is a distinct one, and you would have to give me some basis before I could answer it.

3434. (*Mr. Gibb.*) But if the Paymasters were made cashiers would not the auditor, whether he was stationed locally or stationed at the War Office, have just about the same amount of correspondence?—Yes, there would be the same amount of correspondence unmistakably; only in the one case it is managed through the various regimental Paymasters, and in the other case it would be concentrated here. There would be no more in the bulk.

3435. (*Colonel Miles.*) But a great deal would be done by word of mouth instead of writing?—At regimental districts, for instance, the Paymaster and the Depot Companies are at the same place, and it is conceivable that he walks across from the Orderly Room and settles some questions verbally.

3436. (*Sir George Clarke.*) Would you see any objection to the Ordnance Factories being treated just as, say, Ireland; that is to say, that they should have a complete audit satisfying all requirements done within the Arsenal?—I think my difficulty with regard to that in the case of the Ordnance Factories is that the auditing body ought rather to be in touch with us here at Headquarters than in touch with the factories. I think that whatever financial check (I hate the word "control") or advice is to be given, had very much better be given here centrally in concert between the Financial Secretary and the Director-General of Ordnance, than given by anybody working down there altogether.

3437. But as regards the mere audit of accounts that is partially done there now, do not you think that audit might be made complete, so as to save any reference except on matters of peculiar and special importance?—I see no objection to that. The pure audit is mainly done down there now, I think.

3438. A great deal of it; but all the bills are sent up?—Yes, the bills are paid here. The accounts themselves are audited locally.

3439. (*Sir Charles Welby.*) I suppose you have not gone into the question at all how far such a decentralising of the arrangements as we have suggested would modify the distribution of the work of your department, how far it would be possible to dispense altogether with existing branches?—No, that would be a question which would require a very considerable amount of working out. If you decentralise a vast amount of the work, and only leave a very small portion here, my staff here would probably consist of a small secretariat. In the reorganisation of my own department, I should naturally not require branches of the same strength as at present to deal with the things that had been decentralised; and, if the whole audit were removed, a complete reorganisation of my own branch here would be imperative.

3440. (*Sir George Clarke.*) Take, for example, the case of Foreign stations; would it be possible to have a Mediterranean audit; to have your little War Office either at Malta or Gibraltar, and to deal with the

Mediterranean group there?—That would, no doubt, be quite possible. Of course, there are many other smaller stations where it would scarcely be worth while to institute a War Office. That would mean a Higher Division Clerk (perhaps two when you consider the question of leave) where you only had one regiment or one or two batteries of artillery.

3441. (*Chairman.*) But the Mediterranean audit might include Gibraltar, Malta, and possibly Egypt?—Yes.

3442. (*Sir George Clarke.*) The Regular Army in Egypt and possibly Cyprus?—Yes.

3443. (*Mr. Beckett.*) Under this decentralisation system as now proposed, I gather that you think it would be possible to dispense with the test audit which is now conducted at the War Office?—Certainly. If an audit were made in full, and that full audit could be accepted by me, as I imagine it could, as the final audit, the test audit would naturally fall; it would be unnecessary; it would be supererogation.

3444. In fact, under the proposed system, it would be an entire and complete audit?—That is as I understand what the Committee are contemplating.

3445. And your principal objection to it, I gather, is that you think it would be a little lacking in elasticity in the case of war?—I think it would be very difficult to provide a staff of Paymasters under such a system sufficient either in numbers or training for war, and also to supply from the War Office that additional amount of supervision which would be required, the Paymasters' duties being so considerably simplified, and the more important and difficult duties being thrown upon the staff in this Office, which would have to be sent out for the purpose.

3446. May I ask what is done now. In the first place, you have to improvise or extend the system as it is now, in time of war?—The Paymasters do it now.

3447. But you have to increase their number?—So far as one can. What we have done as a matter of fact is this: we have sent out a certain number of our Paymasters here, and we have applied to every retired Paymaster on the list who was available to come back; and even so we have not had enough.

3448. But you have to increase the number of these Paymasters?—Yes.

3449. And as the Chairman has pointed out, they have more complicated duties to perform under the present system than they would have to perform under the simplified system?—Yes.

3450. And, practically, under the new system, all you would have to do would be to send out a greater number of trained officials from your department at the War Office?—Yes.

3451. (*Sir George Clarke.*) I see in your General Remarks on Treasury control you say: "But generally it may be stated that the Treasury Rules as to the control of Army expenditure are reasonable, having in view the objects to be attained, and are reasonably applied." I take it that that is covered and governed rather by the words, "having in view the objects to be attained"; that is to say having in view generally the objects which the Treasury wishes to attain, you think that the way in which the control is exercised is reasonable; but that does not mean, I take it, that you consider all these small things such as granting an increased price to a contractor, abandonment of claims, and so on, are necessarily to be referred to and considered by the Treasury?—In using the words "in view of the objects to be attained," I did not mean exclusively the objects to be attained from the Treasury point of view; I meant, rather, the objects to be attained from the Parliamentary point of view of control over expenditure; and I confess that I do not think that the control of the Treasury is needless or unreasonable.

3452. Then you do not think that in any of these cases which you have noted in your Memorandum, any relaxation of control or any extending of the limits within which the War Office may act without the sanction of the Treasury is desirable?—No, I do not. In the rules over the Works part there might be some simplification, but I do not think very much. I

think that the Parliamentary point of view—the Public Accounts Committee point of view—with regard to the Treasury is, that if a department wishes to go outside the provisions of Parliament, or to condone any loss, or to do anything abnormal in which personal interests are involved, the Treasury ought to come in; and I do not think myself that that is an unreasonable point of view. I certainly do not object to it myself. I think it is desirable, considering the influences that may be brought to bear upon us, commercial and other, that where there is a departure from regulation, or an excess of expenditure foreseeable, or where there is an allocation of funds away from the purpose to which they have been designed by Parliament it is not unfair that we should be asked to convince another department of the reasonableness of what we are doing.

3453. And you do not think that, in the case of a great many of these applications, the Treasury sanction is purely formal?—No, I think not; but, as regards the formality or actual informality of the Treasury sanction, a Treasury representative would be able to speak with more authority than myself.

3454. (*Chairman.*) But is it not the fact that in cases where the Treasury sanction is, perhaps, merely formal, unless you get that sanction, you have to get a sanction from somebody else—from Parliament?—Yes, I think so.

3455. I mean that it would not reduce the work of the War Office?—No, I think that as regards a great many of these things, the having to obtain their consent is not in itself unreasonable.

3456. But my point is that Parliament having insisted upon certain things, if you did not get Treasury sanction which seems to me to be almost equivalent in many cases to the sanction of Parliament, you would have to get the sanction of Parliament itself?—I think, in all probability that might be the result.

3457. But when you say that you see no reason for any enlargement of power, I suppose you would not object, for instance, to raising the power of the General Officer Commanding for writing off cash?—No.

3458. You were speaking broadly and generally?—Quite so; I was not speaking with regard to that.

3459. There are details in which it might be enlarged?—Yes, I was addressing myself really in those remarks to the general underlying principles of the control, rather than to the exact details, which might probably be altered in some respects.

3460. (*Mr. Gibb.*) Your previous answer as regards getting the consent of the Treasury, in lieu of Parliament, can only apply to cases where the Treasury consent is not followed by the consent of Parliament?—Yes.

3461. If it is followed by the consent of Parliament, then you require the consent of both?—Yes; but Parliament in this matter generally means the Public Accounts Committee.

3462. If you get the consent of the Treasury to an expenditure, that expenditure afterwards goes into the War Office Estimates, and is submitted to Parliament, is it not?—It goes into the account which is submitted to Parliament, and it is open to the Public Accounts Committee to raise objection to that particular item, as they can to every other item of the account. But, substantially, the Public Accounts Committee of Parliament, who go into these matters, generally take what the Treasury recommend.

3463. Although the Treasury recommendation has not been submitted to Parliament?—That is so; the Treasury are as it were the body to which Parliament looks to guard its interests while Parliament is not sitting, or where it may not be worth while to make final application to the House. That is what it comes to.

3464. (*Chairman.*) You are acquainted with these answers which have been sent in by the various branches of your department?—Yes.

3465. I suppose you have seen them all?—Yes.

3466. There are a few questions which I should like to ask you on those, not many; but I do not think we can sit any longer to-day, perhaps you can come to-morrow morning?—Certainly.

The witness withdrew.

Mr. F. T. Marzials.

4 Feb. 1901.

THIRTEENTH DAY'S MEETING.

NINTH DAY'S EVIDENCE.

At the War Office.

Tuesday, 5th February 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., O.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Colonel THOMAS WILLIAM DRAKE, C.B., examined.

Col. T. W.
Drake, C.B.
5 Feb. 1901.

3467. (*Chairman*.) You are Chief Paymaster of the Home District, are you not?—Yes.

3468. And I suppose you have had a good deal of experience in other districts at home and abroad?—Yes, I have had over 30 years of it—about 33 years.

3469. We understand that the Paymaster is concerned in three different classes of payments. First, he issues imprests to Sub-Accountants. Secondly, he makes direct payments for small contracts, local allowances, travelling claims, &c., and thirdly, he is concerned with payments to Reservists and Pensioners; but that last class of payments, I suppose, may be practically eliminated, it is made by money orders?—Yes, but it employs about 25 men in my office, so you can hardly eliminate it; it is the principal part of the work of the Pay Offices now in England, in fact.

3470. I do not mean to eliminate it in the sense that it causes you no work, but as regards your responsibility for cash payments?—As regards cash, there is no cash; it is all done through the Post Office.

3471. Then is there no responsibility for cash?—Yes, a very great deal.

3472. How are the payments actually effected?—Do you mean in what way is there responsibility attached to it?

3473. I understand you draw out the lists, do you not?—We receive lists from Commanding Officers showing the women who have to be paid, and we enter them on our own lists and draw out orders for them. The responsibility, of course, comes in in making incorrect payments, or when money orders are being wrongly used.

3474. But do you verify the names of the claims sent up to you from the Commanding Officer?—No, we do not verify the names; we cannot verify the names, we have to take the Commanding Officer as really responsible for the claims he sends in.

3475. For their being genuine claims?—For their being genuine claims.

3476. Then what do you do with them?—We pay in accordance with those rolls.

3477. You pay them by money orders?—We pay them by money orders.

3478. Who issues the money orders?—They are drawn out by clerks.

3479. In your office?—Yes, and they are checked by an officer.

3480. By an officer of the Pay Department?—By an officer of the Pay Department. We draw now about 11,000 orders a month, I suppose.

3481. Is there much responsibility in it?—A very great deal.

3482. In seeing that the amounts are correct?—In seeing that the amounts are correct. There is no recovery. You cannot recover them, and there is also responsibility in case of losing money, the orders being misappropriated by your clerks.

3483. Then, on the roll reaching you from the Commanding Officer, you issue the payments in money orders?—Yes; all casualties are notified afterwards by the Commanding Officer, and, in the case of women, if they get increases in family, we work them on our own responsibility. That does not go to the Commanding Officer.

3484. If there is an increase in the family?—Yes, that is if there is an increase or an alteration in the allowance granted to them.

3485. What receipts do you get for these money orders?—None, except a great outcry from the women if they do not receive them. There is no positive proof. The proof is rather a negative one, but it is a very good one.

3486. Unless there is an outcry you simply take it that the money has been paid?—Yes; that the order has been received. There is always proof, of course, afterwards, because the money orders are retained at the Post Office for a certain time and then forwarded to the War Office. They can always be traced afterwards.

3487. If they are not delivered to the right person?—Yes.

3488. Supposing that they are delivered to the right person, nothing more is heard of them?—No.

3489. (*Mr. Gibb*.) You do not examine them at certain periods to see if they are right?—Yes, the War Office do that.

3490. (*Chairman*.) How do the War Office do that?—They have a branch here on purpose for it.

3491. But what do they examine?—We send them advice lists, an advice of every order that is issued, and the War Office check the orders by the advice lists.

3492. And they satisfy themselves that the orders have been issued?—They satisfy themselves of that.

3493. (*Mr. Beckett*.) And they check them off as the orders come in, I suppose?—Yes, they check them off as they come in. The orders, of course, go the Post Office first for a couple of months.

3494. But when they are sent in from the Post Office they are checked off at the War Office?—Yes, against the advice lists which we send them.

3495. (*Mr. Gibb.*) Do the recipients of the money call at the Post Office to get it?—The orders are sent to their private addresses; the women have to go to the Post Office to cash them.

3496. (*Chairman.*) As regards other classes of payments, you issue imprests, as they are called, to Sub-Accountants who are generally Captains of companies?—They are Captains of companies as a rule. Of course, all heads of departments draw a certain amount for the payment of their subordinates. For instance, the Ordnance people will draw a certain amount for payment of their subordinates; it saves their coming up to the Office.

3497. Then on what do you issue the imprest; do you receive a demand for the imprest?—Yes, we receive a requisition.

3498. A requisition from the Captain?—In many cases they send in a requisition at the beginning of the month; we make out a list of the money due to officers commanding companies, or to regiments, and we make out the cheques weekly.

3499. You take their statement of the numbers of the men they have got?—They demand so much money. Of course, we know what would be required as a rule to within a little.

3500. You know how many men they have got?—We know the Establishments. We do not know how many men they have until pay lists come in at the end of the month to cover the amounts.

3501. (*Mr. Gibb.*) The demands are accounted for afterwards?—The demands are accounted for afterwards by the pay lists.

3502. (*Chairman.*) Then on that demand which you receive according to the Regulations you issue the money?—Yes, we issue the money.

3503. (*Mr. Gibb.*) I understood you to say that you get a demand for so much money, and you simply issue the money demanded?—Yes.

3504. Relying upon subsequent account?—To see that it is correct.

3505. (*Chairman.*) Relying upon the subsequent pay lists?—Yes. Of course, if we received a very large demand we should ask for an explanation; but we know, as a rule, how much a company will require, and the demands are always, within a few pounds, about the same.

3506. Then you receive the pay lists at the end of the month?—The pay lists come in at the end of the month; that is to say, they are due on the second or third of the following month.

3507. Has the pay list got on it the receipts of the individual men?—Yes.

3508. Of every individual man for the sums he receives?—Yes, every man signs his pay list; that is the rule. Of course there are exceptions, but the rule is that every man should sign his accounts. That has been done for some years under the recommendation of a Committee which sat some years ago.

3509. Then you compare the pay lists with the amount of money that you issue upon the imprest?—We see that the amount of money we have issued is credited in the pay list. We compare the pay lists with the men's names on the pay lists of the previous month. But we see that the money we have issued is actually credited in the pay list. We have a special form in the pay list for all moneys received.

3510. And the pay list comes up with the signature of the sub-accountant?—Yes, the officer commanding the company signs the pay lists.

3511. Then you consider that the pay list practically clears you?—Yes.

3512. And a certain amount of those pay lists are audited at the War Office?—They are all supposed to be audited at the War Office, at least, so far as I know; they all come to the War Office. We send them all every month with our accounts.

3513. And I suppose it is hardly a matter of concern to you what proportion are audited at the War Office. You send them all up in a state ready to be audited, and the War Office exercises its discretion as to how many should be audited or not?—Entirely. I think they are all audited. Of course we do not do that here in the London District, but at the last station that I had, Gibraltar, I fancy from the queries that we had

that everyone is audited; I do not think one is passed without being audited.

3514. What is the difference of procedure at the Home District?—The Home District is really a district office only, and the duties of a Station Paymaster are not performed there. The Station Paymaster is charged with the issue of money for the direct payment of troops; the District Paymaster is charged with the issue of money to departments and offices, and for outside services, district services, such as the payment of bills.

3515. But who would issue the money for the payment of the troops in the Home District?—At Hounslow, the Station Paymaster there would issue; in London, for the Guards, it is done by Messrs. Cox & Co.

3516. They practically act as Paymasters?—They practically act as Paymasters. They have an Acting Paymaster; the Quartermaster, I think, gets extra duty pay, and he draws what funds he wants from Cox's. That, of course, is only for Home Service. Gibraltar, at least, is treated as a Home Station, but when they go on active service they always work through the Army Pay Department.

3517. (*Mr. Beckett.*) Does not the District Paymaster pay the money to the Station Paymasters?—No, it comes straight from the War Office, that is at home. Of course, abroad, the District Paymaster is Treasury Chest Officer, and as he is also Station Paymaster he issues the money direct to the troops.

3518. (*Chairman.*) But in all Home offices it is issued from the War Office?—Direct.

3519. (*Mr. Gibb.*) You said that you compared each pay list with the previous pay lists?—Yes, with the previous month's pay lists; the two are sent in together.

3520. If you find changes, what is done?—They have to be accounted for.

3521. What do you do; do you seek an explanation of the changes?—Yes, they always come up as a matter of course; they are sent up as vouchers to the pay list. Every change that happens from the previous month is noted in some way or another, there are different ways.

3522. (*Mr. Beckett.*) Noted by you or by whom?—By the Commanding Officer; he sends in a Return.

3523. (*Mr. Gibb.*) A Return accompanies the pay list?—Yes.

3524. And you check each pay list, so far as it corresponds with the previous pay list, and you obtain an explanation for any alterations?—Yes, any alterations during the month, such as deaths or imprisonment, &c.

3525. (*Mr. Beckett.*) Then you practically audit the pay list?—We practically audit the pay list.

3526. Do you certify that it is correct?—Yes.
